Security of India's Ports, Coast and Maritime Trade - Dr. Mohit Nayal 2021-06-01

India's rise as a global power in the 21st century will be backed with a strong blue economy. The high volumetric trade activities through its coastal region, mainly due to its geostrategic location and efficient links with the vast potential market in the hinterland and other landlocked states, provides it unmatched leverage. Among such promising enterprising, attracting global investments and trade, the non-conventional security threats within the Indian Ocean region and India's ports and coast cannot be ignored. Therefore, to address these challenges, the law at the seas formulated by various global organisations and other national and international regulatory mechanisms become essential for all those directly or indirectly involved in India's maritime security. Over the years, many state coastal security agencies have evolved with specific potential and restrictions, which creates a certain conditionality of the existing non-conventional security challenges and maritime conflicts with its neighbours. The successful use of security-related technology to outpace such non-conventional threats creates a demand for further bolstering such technologies for India's advantage. Besides, these prevailing threats to the ports and coastal region, the environmental security challenges also directly impact humans and cannot be undermined. The book covers all these facets in detail, identifying the specific fault lines and makes recommendations to address the non-conventional security challenges of India's ports, coast and maritime trade. The book will be of interest to policymakers, academicians, practitioners, scholars, and all those individuals and institutes interested in India's Ports, Coastal and Maritime Security.

It doesn't suffer from deficiencies which, normally, books on this subject are seen afflicted with. It drills deep into the roots of corruption, its genesis and spread—and goes on to assert that the evil phenomenon is not entirely a product of human failures. Religion and culture—and even gods, since the end of the Satya-Yuga, are assigned a considerable part of the blame. The solution to corruption, an expression of imbalanced human nature, is seen beyond normal legal and administrative measures that are feasible under electoral democracies or any other form of dharma deficient governance. Gender and Social Equity in Primary Education - Vimala Ramachandran 2004-08-19

In recent years, India has made impressive strides in increasing literacy rates and in enabling access to education. The country now seems well set to provide universal and good quality basic education. Yet, behind this otherwise rosy picture lie serious concerns relating primarily to gender and equity. /-/-/This volume provides an insightful understanding of the ground realities of primary education programmes, particularly those run by the District Primary Education Programme (DPEP). Combining secondary research with field studies conducted in six states, the contributors explore gender and social equity issues in primary education. They conclude that there is a subtle but nevertheless discernible 'hierarchy of access' to education, which has resulted in new forms of segregation in primary schools.

Human Rights in India - Satvinder Juss 2019-10-15

This volume presents an integrated collection of essays around the theme of India's failure to grapple with the big questions of human rights protections affecting marginalized minority groups in the country's recent rush to modernization. The book traverses a broad range of rights violations from: gender equality to sexual orientation, from judicial review of national security law to national security concerns, from water rights to forest rights of those in need, and from the persecution of Muslims in Gulberg to India's parallel legal system of Lok Adalats to resolve disputes. It calls into question India's claim to be a contemporary liberal democracy. The thesis is given added strength by the authors' diverse perspectives which ultimately create a synergy that stimulates the thinking of the entire field of human rights, but in the context of a non-western country, thereby prompting many specialists in human rights to think in new ways about their research and the direction of the field, both

in India and beyond. In an area that has been under-researched, the work will provide valuable guidance for new research ideas, experimental designs and analyses in key cutting-edge issues covered in this work, such as Acid Attacks or the right to protest against the 'nuclear' state in India.
