The complex world of sex and appropriate sexual behaviour can be extremely challenging for people with autism spectrum disorder (ASD) and, without guidance, many find themselves in vulnerable situations. This book examines how the ASD profile typically affects sexuality and how sexual development differs between the general population and those with ASD. It explains the legalities of sexual behaviour, how laws differ from country to country, and the possibility for adjustment of existing laws as they are applied to the ASD population. My Parent has an Autism Spectrum Disorder - Barbara Lester 2011-08-15

Discovering that a family member is on the autism spectrum is an experience that affects the entire family, and can particularly disrupt the family when it is a parent receiving the diagnosis. The situation can be difficult to explain to children, especially if a parent has not fully grasped the implication themselves, and any adult facing this challenge will be in need of a helping hand. The workbook has been designed with precisely this purpose in mind. It will strengthen relationships between parents with ASDs and their children by facilitating understanding of behaviour and situations that all the family will previously have

noticed but not understood, and shows how to develop effective problem solving strategies. Chapters cover everything from dealing with the initial diagnosis to understanding special interests, difficulties with social skills and figures of speech, and the need for rules and routines. Every chapter concludes with a worksheet for parent and child to complete together, which encourages mutual understanding and fosters healthy relationships. This book will be an essential tool for any family with a parent on the autistic spectrum, and is equally suitable for children and teens who are on the autistic spectrum and those who are not. It will also be of interest to professionals and anyone else working with a family dealing with autism.

This book presents an international research-based framework that has empowered parents of children with autism spectrum disorder (ASD) to become critical decision makers to actively guide their child's learning and self-advocacy. Parents can use this framework to identify their child's vision and dreams, and to work with educators and service providers to establish specific learning goals and to implement effective interventions and programs that enable their child to achieve those goals and realise their vision for the future. The book begins by reviewing available research on evidence-based practice for children with ASD and outlining the Cycle of Learning decision-making framework for parents and professionals. Throughout the remainder of the book, case studies are presented to illustrate the ways in which different parents have successfully utilised this framework to develop effective plans for their child and to advocate for learning and education programs for both their child and other children with ASD in school and community

settings. In addition, it highlights concrete examples of how parents have used the framework to empower their children with ASD to develop their self-awareness and self-determination, and to be able to self-advocate as they move through adolescence and into adult life.
