Disciplinary Discourses, Michigan Classics Ed. - Ken Hyland 2004-07-22

Why do engineers "report" while philosophers "argue" and biologists "describe"? In the Michigan Classics Edition of *Disciplinary Discourses: Social Interactions in Academic Writing*, Ken Hyland examines the

relationships between the cultures of academic communities and their unique discourses. Drawing on discourse analysis, corpus linguistics, and the voices of professional insiders, Ken Hyland explores how academics use language to organize their professional lives, carry out intellectual tasks, and reach agreement on what will count as knowledge. In addition, *Disciplinary Discourses* presents a useful framework for understanding the interactions between writers and their readers in published academic writing. From this framework, Hyland provides practical teaching suggestions and points out opportunities for further research within the subject area. As issues of linguistic and rhetorical expression of disciplinary conventions are becoming more central to teachers, students, and researchers, the careful analysis and straightforward style of *Disciplinary Discourses* make it a remarkable asset. The Michigan Classics Edition features a new preface by the author and a new foreword

by John M. Swales.

Plant-Microbe Interactions, Volume 2 Volume 1 of this series has made its appearance and dealt forcefully with important current topics in the field of plant-microbe interactions. We believe that the quality of those chapters was high and should serve as a focal point for the state of the art as well as an enduring reference. Volume 2 builds upon these accomplishments. Chapter 1 discusses the fascinating lipo-chitin signal

molecules from Rhizobium, aspects regarding their biosynthesis, and the basis for host specificity. These molecules are a cardinal example of how microorganisms influence plant development and stimulate speculation that they have identified a previously unknown aspect of plant hormone activity. Chapter 2 continues the discussion of Rhizobium by considering the trafficking of carbon and nitrogen in nodules. Although the ostensible advantage of nodules to plants is the fixation of atmospheric nitrogen, the actual process involved in supplying reduced nitrogen to the plant host is complex.
