Times of Convergence. Technologies Across Learning Contexts - Pierre Dillenbourg 2008-09-08

The European Conference on Technology-Enhanced Learning (EC-TEL 2008) was the third event of a series that started in 2006. The two first editions were organized by Pro- Learn (<http://www.prolearn-project.org/>), a European Network of Excellence. In 2008, several members of Kaleidoscope, the other European Network of Excellence (<http://www.noe-kaleidoscope.org/pub/>), joined as co-chair, committee members, reviewers and authors. These two networks are no longer funded, but our aim was to turn EC-TEL into a sustainable series of high-quality events and thereby to contribute to the scientific landscape of technology-enhanced learning. A new network, named STELLAR, will be launched in 2009, with members from both existing networks as well as new members and will support the future editions of this conference. The scope of EC-TEL 2008 covered the different fields of learning technologies: e- cation, psychology, computer science. The contributions in this volume address the - sign of innovative environments, computational models and architectures, results of empirical studies on socio-cognitive processes, field studies regarding the use of te- nologies in context, collaborative processes, pedagogical scenarios, reusable learning objects and emerging objects, groups and communities, learning networks, interaction analysis, metadata, personalization, collaboration scripts, learning adaptation, collabo- tive environments, resources, tangible tools, as well as learning management systems.

Why Fiction? - Jean-Marie Schaeffer 2010-07-01

In *Why Fiction?*—one of the most important works of narrative theory to come out of France in recent years—Jean-Marie Schaeffer understands fiction not as a literary genre but, in contrast to all other literary theorists, as a genre of life. The result is arguably the first systematic refutation of Plato's polemic against fiction and a persuasive argument for regarding fiction as having a cognitive function. For Schaeffer fiction includes not only narrative fiction but also children's games, videos, film, drama, certain kinds of painting, opera—in short, all the intentional structures arising from shared imaginative reality. Because video games and cyber-technologies are the new sites of entry for many children into such an imagined universe, studying these cyber-fictions has become integral to our understanding of fiction. Through these avenues, Schaeffer also explores the foundations of mimeticism in order to explain the important effect fiction has on human beings. His work thus establishes fiction as a universal aspect of human culture and offers a profound and resounding answer to the question: Why fiction?

Creative Collaboration in Teaching - Marcelo Giglio 2016-04-29

Creative Collaboration in Teaching focuses on the question of how best to facilitate creative collaboration among students in the classroom setting—with a focus on music composition and from the perspective of social-cultural psychology. This book is comprehensive, cutting-edge and scholarly in its approach. Marcelo Giglio's attention to music and creativity is detailed enough to satisfy any researcher, educator or teacher educator; but at the same time, his research approach, classroom observations and overriding recommendations can be easily applied to a wide range of subject areas. Giglio combines a rigorous review of the relevant literatures on creativity and social interactions with the reporting and analysis of his own original data across the world, and then goes on to support this important work with detailed descriptions of classroom episodes—student-to-student and teacher-to-student interactions. By combining these three elements, this book offers socio-creative and pedagogical models for education in practice as well as teacher education and research.

Confronting the Challenges of Participatory Culture - Henry Jenkins 2009-06-05

Many teens today who use the Internet are actively involved in participatory cultures—joining online communities (Facebook, message boards, game clans), producing creative work in new forms (digital sampling, modding, fan videomaking, fan fiction), working in teams to complete tasks and develop new knowledge (as in Wikipedia), and shaping the flow of media (as in blogging or podcasting). A growing body of scholarship suggests potential benefits of these activities, including opportunities for peer-to-peer learning, development of skills useful in the modern workplace, and a more empowered conception of citizenship. Some argue that young people pick up these key skills and competencies on their own by interacting with popular culture; but the problems of unequal access, lack of media transparency, and the breakdown of traditional forms of socialization and professional training suggest a role for policy and pedagogical intervention. This report aims to shift the conversation about the "digital divide" from questions about access

to technology to questions about access to opportunities for involvement in participatory culture and how to provide all young people with the chance to develop the cultural competencies and social skills needed.

Fostering these skills, the authors argue, requires a systemic approach to media education; schools, afterschool programs, and parents all have distinctive roles to play. The John D. and Catherine T. MacArthur Foundation Reports on Digital Media and Learning
