A Solution to a Pointless Life - Albert Amao Soria Ph.D. 2023-04-20

This book empowers the reader to awaken his inner power by providing psychological and metaphysical tools for improving their life. Humans should undertake the power dwelling in them and become active co-creators of their personal and social environment. The book is a necessary component in a materialistic post-modern consumeristic society. It focuses on removing the self-loathing ideas imposed by religious organizations and mass media. Moreover, it offers a plausible and coherent theory that answers the old-honored predicament of finding the true purpose of human existence. Blending ideas from philosophers with the popular wisdom of native folklore, Occidental and Oriental sacred scriptures, sociology, metaphysics, philosophy (existentialism), and modern quantum physics, this book reveals that humans should actively participate in the awakening of their consciousness. Having no purpose in life can lead people to a deep psychological depression called existential anxiety. Thus, ignoring the role of man's importance

in the drama of the universe, the lack of a myth or meaning could be tragic and detrimental. Since the dawn of civilization, humans have taken for granted or assumed that they had an inherent purpose in life by being born, which turned out to be a big fallacy. In addition, humans have been brainwashed and domesticated by false ideas creating a herd mentality by the ruling elite. Under these circumstances, how do we humans find authentic meaning in what seems to be a senseless life? Modern philosophy has become increasingly abstract and separate from human beings, unable to offer positive guidance to ordinary people. Finding a purpose in human existence is the primary motivational force for human existence. The ultimate purpose of human existence is to become a conscious god.

Future of Jobs - IntroBooks Team

Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably under way, where some chores are

either offshored or given to robots. A better world of for jobs cannot be warranted – a lot will be contingent on devising the right policies and institutes in place.
