Skirrid Hill - Owen Sheers 2005
Ideas of separation and divorce the geographical divides of borders, the separation of the dead and the living, the movement from childhood to adulthood, and the end of relationships drive this poetry collection from one of Great Britain's rising young talents. The collection revolves around the poems "Y Gaer" and "The Hillfort," the titles themselves suggesting the linguistic divide in Wales, from poems concerned with childhood, a Welsh landscape, and family to an

outward-looking vision that is both geographic and historic. "

Attribution of Extreme Weather Events in the Context of Climate Change - National Academies of Sciences, Engineering, and Medicine 2016-07-28

As climate has warmed over recent years, a new pattern of more frequent and more intense weather events has unfolded across the globe. Climate models simulate such changes in extreme events, and some of the reasons for the changes are well understood. Warming increases the likelihood of extremely hot days and nights, favors increased atmospheric moisture that may result in more frequent heavy rainfall and snowfall, and leads to evaporation that can exacerbate droughts. Even with evidence of these broad trends, scientists cautioned in the past that individual weather events couldn't be attributed to climate change. Now, with advances in understanding the climate science behind extreme events and the science of extreme event attribution, such blanket statements may not be accurate. The relatively young science of extreme event attribution seeks to tease out the influence of human-cause climate change from other factors, such as natural sources of variability like El Niño, as contributors to individual extreme events. Event attribution can answer questions about how much climate change influenced the probability or intensity of a specific type of weather event. As event attribution capabilities improve, they could help inform choices about assessing and managing risk, and in guiding climate adaptation strategies. This report examines the current state of science of extreme weather attribution, and identifies ways to move the science forward to improve attribution capabilities.

Refugee Boy - Benjamin Zephaniah
2013-05-23

An eye for an eye. It's very simple. You choose your homeland like a hyena picking and choosing where he steals his next meal from. Scavenger. Yes you grovel to the feet of Mengistu and when his people spit at you and kick you from the bowl you scuttle across the border. Scavenger. As a violent civil war rages back home, teenager Alem and his father are in a B&B in Berkshire. It's his best holiday ever. The next morning his father is gone and has left a note explaining that he and his mother want to protect Alem from the war. This strange grey country of England is now his home. On his own, and in the hands of the social services and the Refugee Council, he lives from letter to letter, waiting to hear something from his father. Then Alem meets car-obsessed Mustapha, the lovely 'out of your league' Ruth and dangerous Sweeney – three unexpected allies who spur him on as Alem fights to be seen as more than just the Refugee Boy. Based on the novel by Benjamin Zephaniah, Refugee Boy is an urgent story of a courageous African boy sent to England to escape the violent civil war, a story about arriving, belonging and finding 'home'.

Extreme Stars - James B. Kaler
2001-03-22

Over the past 200 years, our knowledge of stars has expanded enormously. From seeing myriad dots of different brightnesses, we moved on to measure distances, temperatures, sizes, chemical compositions, even ages, finding stars that dwarf our Sun and are dwarfed by it, some in their youth, others ancient. First published in 2001, *Extreme Stars* describes the lives of stars from a fascinating perspective. It examines their amazing extremes and results in an engaging overview of stellar evolution, suitable for anyone interested in viewing or studying stars. Ten chapters, generously illustrated throughout, explain the natures of the brightest, the largest, the hottest, the youngest, and so on, ending with a selection of the strangest stars the Universe has to offer. Taken as a whole, the chapters show how stars develop and die and how each extreme turns into

another under the inexorable twin forces of time and gravity.
