Independent Commission on Banking - Great Britain:

Parliament: House of Commons: Treasury Committee
2011-07-22

In this report the Treasury Committee calls on the Independent Commission on Banking to address a number of concerns that have been raised about its proposal to ring-fence retail banking - including its effect on the competitiveness of UK banking and the cost of credit to business. The Commission should also look at how corporate governance in banks could be improved to enhance the stability of the financial system. The MPs urge the major banks to place any objections or concerns they have about the ICB proposals fully in to the public domain. A final ICB report based on private discussion and agreement with the banks rather than rigorous public scrutiny would lack public credibility and acceptability. The Committee is also concerned that the option of full structural separation of

retail and investment banking has not received sufficient analysis. The ICB should provide further details as to the costs and benefits of this reform option and why it decided against full separation when proposing ring-fencing as the lead option in its interim report.

Sampling Normal and Schizophrenic Inner Experience - Russell T.

Hurlburt 2012-12-06

What are the basic data of psychology? In the early years of experimental psychology, they were reports of "brighter" or "heavier" or other estimates of the magnitude of differences between the sensory stimuli presented in psychophysical experiments. Introspective accounts of the experience of seeing colored lights or shapes were important sources of psychological data in the laboratories of Cornell, Harvard, Leipzig, or Würzburg around the turn of the century. In 1910, John B. Watson called for the objectification of psychological research, even parodying the typical subjective introspective reports that emerged from Edward Bradford Titchener's laboratory. For almost fifty years psychologists largely eschewed subjective information and turned their attention to observable

behavior. Rats running mazes or pigeons pecking away on varied schedules of reinforcement became the scientific prototypes for those psychologists who viewed themselves as "doing science." Psychoanalysts and clinical psychologists sustained interest in the personal reports of patients or clients as valuable sources of data for research. For the psychologists, questionnaires and projective tests that allowed for quantitative analysis and psychometrics seemed to circumvent the problem of subjectivity. Sigmund Freud's introduction of on going free association became the basis for psychoanalysis as a therapy and as a means of learning about human psychology. Slips-of-the tongue, thought intrusions, fantasies, hesitations, and sudden emotional expressions became the data employed by psychoanalysts in formulating hypotheses about resistance, memory, transference, and a host of presumed human

wishes and conflicts.

The Global Findex Database 2017 - Asli Demirguc-Kunt 2018-04-19

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world.

The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion.
