Clinical cases - Rodolfo Brühl Day

2020-08-27T00:00:00+02:00

This new book on veterinary surgery focuses on the gastrointestinal tract and accessory organs of digestion in small animals. Its educational approach, through the description of 30 surgical cases, provides the reader with a better understanding when it comes to perform surgeries in dogs and cats with gastrointestinal disorders. Both simple cases and more complex ones are addressed, covering a wide range of situations that the veterinary surgeon may be faced with in the practice. For each case, the authors include the case history, the physical examination, the surgical preparation and technique, as well as additional considerations and tips when necessary.

The Ethics of Eating Animals - Bob Fischer 2019-09-05
Intensive animal agriculture wrongs many, many animals. Philosophers have argued, on this basis, that most people in wealthy Western contexts are morally obligated to avoid animal products. This book explains why the author thinks that's mistaken. He reaches this negative conclusion by contending that the major arguments for veganism fail: they don't establish the right sort of connection between producing and eating animal-based foods. Moreover, if they didn't have this problem, then they would have other ones: we wouldn't be obliged to abstain from all animal products, but to eat strange things instead—e.g., roadkill, insects, and things left in dumpsters. On his view, although we have a collective obligation not to farm animals, there is no specific diet that most individuals ought to have. Nevertheless, he does think that some people are obligated to be vegans, but that's because they've joined a movement, or formed a practical identity, that requires that sacrifice. This book argues that there are good reasons to make such a move, albeit not ones strong enough to show that everyone must do likewise.

Mammoths of the Great Plains - Eleanor Arnason
2010-05-01

When President Thomas Jefferson sent Lewis and Clark to explore the West, he told them to look especially for mammoths. Jefferson had seen bones and tusks of the great beasts in Virginia, and he suspected—he hoped!—that they might still roam the Great Plains. In Eleanor Arnason's imaginative alternate history, they do: shaggy herds thunder over the grasslands, living symbols of the oncoming struggle between the Native peoples and the European invaders. And in an unforgettable saga that soars from the badlands of the Dakotas to the icy wastes of Siberia, from the Russian Revolution to the AIM protests of the 1960s, Arnason tells of a modern woman's struggle to use the weapons of DNA science to fulfill the ancient promises of her Lakota heritage. PLUS: "Writing SF During World War III," and an Outspoken Interview that takes you straight into the heart and mind of one of today's edgiest and most uncompromising speculative authors.
