From Under the Wheel - Lynn Gawronski 2008-06

From Under the Wheel is an introspective look at loss and devastation and helps find a way to reach far beyond the events in our lives that leave scars. It challenges the Why Me? in all of us and exposes the path our choices ultimately create. It encourages a way to move past losses and difficulties by assigning a meaning to individual experiences. And finally, it helps excavate the true intent of your inner self to give purpose to living every day. Lynn Gawronski's view From Under the Wheel is both reality and metaphorical. The picture of the wheel of the single axel flat bed trailer sitting on her chest as it ran her over is forever imprinted in her memory. But even a miraculous recovery wouldn't stop trauma from happening again. Two years later, she was a passenger in a car hit broadside by another and was left partially paralyzed with facial injuries and emotional scars. The next twenty years would prove to challenge every bit of her faith with more tragedy and loss and at times, just life; each time stimulating another wheel and presenting another effort for recovery and healing whether physical or emotional. The end result is the emergence of a life with purpose and renewed spirit, but the book doesn't stop there. She also provides a planning tool and the steps that she is using to help her carry out her purpose in life so that the reader may do the same. With each new challenge and successful outcome, Lynn Gawronski considers herself out From Under the Wheel.

You - William B. Irvine 2018-09-07

What are you? Obviously, you are a person with human ancestors that can be plotted on a family tree, but you have other identities as well. According to evolutionary biologists, you are a member of the species *Homo sapiens* and as such have ancestral species that can be plotted on the tree of life. According to microbiologists, you are a collection of cells, each of which has a cellular ancestry that goes back billions of years. A geneticist, though, will think of you primarily as a gene-replication machine and might produce a tree that reveals the history of any given gene. And finally, a physicist will give a rather different answer to the identity question: you can best be understood as a collection of atoms, each of which has a very long history. Some have been around since the Big Bang, and others are the result of nuclear fusion that took place within a star. Not only that, but most of your atoms belonged to other living things before joining you. From your atoms' point of view, then, you are just a way station on a multibillion-year-long journey. *You: A Natural History* offers a multidisciplinary investigation of your hyperextended family tree, going all the way back to the Big Bang. And while your family tree may contain surprises, your hyperextended history contains some truly amazing stories. As the result of learning more about who and what you are, and about how you came to be here, you will likely see the world around you with fresh eyes. You will also become aware of all the one-off events that had to take place for your existence to be possible: stars had to explode, the earth had to be hit 4.5 billion years ago by a planetesimal and 65 million years ago by an asteroid, microbes had to engulf microbes, the African savanna had to undergo climate change, and of course, any number of your direct ancestors had to meet and mate. It is difficult, on becoming aware of just how contingent your own existence is, not to feel very lucky to be part of our universe.

7th International Munich Chassis Symposium 2016 - Prof. Dr. Peter E. Pfeffer 2016-08-15

In chassis development, the three aspects of safety, vehicle dynamics and ride comfort are at the top of the list of challenges to be faced. Addressing this triad of challenges becomes even more complex when the chassis is required to interact with assistance systems and other systems for fully automated driving. What is more, new demands are created by the introduction of modern electric and electronic architectures. All these requirements must be met by the chassis, together with its subsystems, the steering, brakes, tires and wheels. At the same time, all physical relationships and interactions have to be taken into account.
