Visual Notetaking - James David

Rockefeller

Notetaking means to record information obtained from other sources (lectures, books, Internet) in a systematic manner. The practice of notetaking allows students to review material without relying solely on their memories. Not all students have good notetaking skills, and some would argue that the traditional method of notetaking is not the most suitable method for all students. The Visual Notetaking Strategy is defined as the process of representing information non-linguistically. This means through drawings or pictures. It can be simple, using sketches or doodles, or more complex, using mind mapping or concept maps as representations. Notetaking is a skill that takes some practice, but it makes a tremendous difference in grades and - more importantly - improves the ability to learn and feel successful.

Editing Across Media - Ross F. Collins
2013-02-18

Requirements for professional media editing have undergone enormous technological change. Editors still edit copy. But today they do much more. Mass media editors must demonstrate skills from computerized pagination to social media monitoring, from image manipulation to Search Engine Optimization. The need for editing skills is reaching far beyond traditional journalism and into all areas of

mass media, from newspapers to strategic communication. Public relations practitioners are expected to edit. Even advertising creative professionals must edit. And journalists taking on new roles as social media editors need to understand editing at the speed of digital media. This textbook aims to prepare university-level students for these expanded editing roles in an age of convergence. Thirteen authors representing many years of collective media experience examine both traditional editing roles and new editing needs. While many mass media students will not become professional editors, this textbook assumes nearly all will need competent editing knowledge to produce products of professional quality. Editing, the authors believe, remains a bedrock skill for all students who hope to be successful in the mass media. Instructors considering this book for use in a course may request an

Self-Healing Composites - Guoqiang Li

2014-09-23

In this book, the self-healing of composite structures with shape memory polymer as either matrix or embedded suture is systematically discussed. Self-healing has been well known in biological systems for many years: a typical example is the self-healing of human skin. Whilst a minor wound can be self-closed by blood clotting, a deep and wide cut needs external help by suturing. Inspired by this observation, this book proposes a two-step close-then-heal (CTH) scheme for healing wide-opened cracks in composite structures—by constrained shape recovery first, followed by molecular healing. It is demonstrated that the CTH scheme can heal wide-opened structural cracks repeatedly, efficiently, timely, and molecularly. It is believed that self-healing represents the next-

generation technology and will become an engineering reality in the near future. The book consists of both fundamental background and practical skills for implementing the CTH scheme, with additional focus on understanding strain memory versus stress memory and healing efficiency evaluation under various fracture modes. Potential applications to civil engineering structures, including sealant for bridge decks and concrete pavements, and rutting resistant asphalt pavements, are also explored. This book will help readers to understand this emerging field, and to establish a framework for new innovation in this direction. Key features: explores potential applications of shape memory polymers in civil engineering structures, which is believed to be unique within the literature balanced testing and mathematical modeling, useful for both academic

researchers and practitioners the self-healing scheme is based on physical change of polymers and is written in an easy to

understand style for engineering professionals without a strong background in chemistry
