Vibrant and Healthy Kids - National Academies of Sciences, Engineering, and Medicine 2019-12-27
Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in

neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. *Vibrant and Healthy Kids: Aligning Science, Practice, and*

Policy to Advance Health Equity builds upon and updates research from *Communities in Action: Pathways to Health Equity* (2017) and *From Neurons to Neighborhoods: The Science of Early Childhood Development* (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.

Humans Need Not Apply - Jerry Kaplan 2015-08-04

An “intriguing, insightful” look at how algorithms and robots could lead to social unrest—and how to avoid it (*The Economist*, Books of the Year). After decades of effort, researchers are finally cracking the code on artificial intelligence. Society stands on the cusp of unprecedented

change, driven by advances in robotics, machine learning, and perception powering systems that rival or exceed human capabilities. Driverless cars, robotic helpers, and intelligent agents that promote our interests have the potential to usher in a new age of affluence and leisure—but as AI expert and Silicon Valley entrepreneur Jerry Kaplan warns, the transition may be protracted and brutal unless we address the two great scourges of the modern developed world: volatile labor markets and income inequality. In *Humans Need Not Apply*, he proposes innovative, free-market adjustments to our economic system and social policies to avoid an extended period of social turmoil. His timely and accessible analysis of the promises and perils of AI is a must-read for business leaders and policy makers on both sides of the aisle. “A reminder that AI systems don’t need red laser eyes to be dangerous.”—*Times Higher Education Supplement*

Why Zebras Don't Get Ulcers - Robert M. Sapolsky
2004-09-15

Renowned primatologist Robert Sapolsky offers a completely revised and updated edition of his most popular work, with over 225,000 copies in print. Now in a third edition, Robert M. Sapolsky's acclaimed and successful *Why Zebras Don't Get Ulcers* features new chapters on how stress affects sleep and addiction, as well as new insights into anxiety and personality disorder and the impact of spirituality on managing stress. As Sapolsky explains, most of us do not lie awake at night worrying about whether we have leprosy or malaria. Instead, the diseases we fear—and the ones that plague us now—are illnesses brought on by the slow accumulation of damage, such as heart disease and cancer. When we worry or experience

stress, our body turns on the same physiological responses that an animal's does, but we do not resolve conflict in the same way—through fighting or fleeing. Over time, this activation of a stress response makes us literally sick. Combining cutting-edge research with a healthy dose of good humor and practical advice, *Why Zebras Don't Get Ulcers* explains how prolonged stress causes or intensifies a range of physical and mental afflictions, including depression, ulcers, colitis, heart disease, and more. It also provides essential guidance to controlling our stress responses. This new edition promises to be the most comprehensive and engaging one yet.

Africa's Future, Africa's Challenge - Marito H. Garcia
2008-01-18

Early childhood, from birth through school entry, was largely invisible worldwide as a policy concern for much of the twentieth century. Children, in the eyes of most countries, were 'appendages' of their

parents or simply embedded in the larger family structure. The child did not emerge as a separate social entity until school age (typically six or seven). 'Africa's Future, Africa's Challenge: Early Childhood Care and Development in Sub-Saharan Africa' focuses on the 130 million children south of the Sahel in this 0-6 age group. This book, the first of its kind, presents a balanced collection of articles written by African and non-African authors ranging from field practitioners to academicians and from members of government organizations to those of nongovernmental and local organizations. 'Africa's Future, Africa's Challenge' compiles the latest data and viewpoints on the state of Sub-Saharan Africa's children. Topics covered include the rationale for investing in young children, policy trends in early childhood development (ECD), historical perspectives of ECD in Sub-Saharan Africa including indigenous approaches, new threats from HIV/AIDS, and the

importance of fathers in children's lives. The book also addresses policy development and ECD implementation issues; presents the ECD programming experience in several countries, highlighting best practices and challenges; and evaluates the impact of ECD programs in a number of countries.

Music in Conflict - Nili Belkind 2020-10-16

Music in Conflict studies the complex relationship of musical culture to political life in Palestine-Israel, where conflict

Downloaded from id-blockchain.idea.gov.vn on
by guest

has both shaped and claimed the lives of Palestinians and Jews. In the context of the geography of violence that characterizes the conflict, borders and boundaries are material and social manifestations of the ways in which the production of knowledge is conditioned by political and structural violence. Ethical and aesthetic positions that shape artistic production in this context are informed by profound imbalances of power and contingent exposure to violence. Viewing expressive culture as a potent site for understanding these dynamics, the book examines the politics of sound to show how music-making reflects and forms identities, and in the process, shapes communities. The ethnography is based on fieldwork conducted in Israel and the West Bank in 2011-2012 and other excursions since then. Author has "followed the conflict" by "following the music," from concert halls to demonstrations, mixed-city

community centers to Palestinian refugee camp children's clubs, alternative urban scenes and even a checkpoint. In all the different contexts presented, the monograph is thematically and theoretically underpinned by the ways in which music is used to culturally assert or reterritorialize both spatial and social boundaries in a situation of conflict.

The Writing Revolution -

Judith C. Hochman 2017-08-07

Why you need a writing revolution in your classroom and how to lead it The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, The Writing Revolution can make a

*Downloaded from id-blockchain.idea.gov.vn on

dramatic difference. And the method does more than improve writing skills. It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities The Writing Revolution is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.

The Education of d/Deaf and Hard of Hearing Children -

Peter V. Paul 2020-02-12

A significant number of d/Deaf and hard of hearing (d/Dhh)

children and adolescents experience challenges in acquiring a functional level of English language and literacy skills in the United States (and elsewhere). To provide an understanding of this issue, this book explores the theoretical underpinnings and synthesizes major research findings. It also covers critical controversial areas such as the use of assistive hearing devices, language, and literacy assessments, and inclusion. Although the targeted population is children and adolescents who are d/Dhh, contributors found it necessary to apply our understanding of the development of English in other populations of struggling readers and writers such as children with language or literacy disabilities and those for whom English is not the home language. Collectively, this information should assist scholars in conducting further research and enable educators to develop general instructional guidelines and strategies to improve the language and literacy levels of

Downloaded from id-blockchain.idea.gov.vn on

d/Dhh students. It is clear that there is not a 'one-size-fits-all' concept, but, rather, research and instruction should be differentiated to meet the needs of d/Dhh students. It is our hope that this book stimulates further theorizing and research and, most importantly, offers evidence- and reason-based practices for improving language and literacy abilities of d/Dhh students.

Child and Adolescent

Psychopathology - Theodore P. Beauchaine 2017-01-24

A unique, multi-discipline, developmental approach to childhood psychopathology
Child and Adolescent Psychopathology is the only comprehensive text in the field to address genetic, neurobiological, and environmental factors within a developmental context. Based on cutting-edge research and aligned with the DSM-5, this book emphasizes how, when, and why disorders emerge among young people, and the ways in which symptom profiles change at different

stages of development. This new third edition has been updated to include new chapters on OCD and trauma disorders consistent with DSM-5 classification, and includes new discussion on epigenetics and the neighborhood effects on the development of delinquency. Coverage includes extensive discussion of risk factors, from disturbed attachment relations and abuse/neglect, to head injury and teratogen exposure, followed by in-depth examination of behavior disorders and psychological disorders including Autism Spectrum, Schizophrenia Spectrum, and Eating Disorders. Psychological disorders in children are increasingly being explored from a relational perspective, and continuous advances in neurobiology research are adding an additional dimension to our understanding of cause, effect, and appropriate intervention. This book provides detailed guidance toward all aspects of childhood psychopathology, with a multi-

discipline approach and a unique developmental emphasis. Discover how psychopathology emerges throughout the stages of development Learn how both genetics and environmental factors influence risk and behaviors Understand the prevalence, risk factors, and progression of each disorder Gain deep insight from leading experts in neurobiology and developmental psychopathology As the field of child psychology continues to evolve, behavioral and psychological disorders move beyond a list of symptoms to encompass the 'whole child'—biology, chemistry, environment, and culture are becoming increasingly relevant in understanding and treating these disorders, and must be considered from the earliest assessment stages. Child and Adolescent Psychopathology provides comprehensive information on childhood disorders from a developmental perspective.

Feral Children and Clever Animals - Douglas K. Candland

1995-10-26

In this provocative book, Douglas Candland shows that as we begin to understand the way animals and non-speaking humans "think," we hold up a mirror of sorts to our own mental world, and gain profound insights into human nature. Weaving together diaries, contemporary newspaper accounts, and his own enlightening commentary, Candland brings to life a series of extraordinary stories. He begins with a look at past efforts to civilize feral children. We meet Victor, the Wild Boy of Aveyron, now famous as the subject of a Truffaut film; Kaspar Hauser, raised in a cell, civilized, and then assassinated; and the Wolf Girls of India, found early this century huddled among wolf pups in a forest den (they were originally believed to be ghosts by superstitious villagers, who nearly shot them as they were being captured). In each case, it was hoped that the study of these children would help clarify the age-old nature/nurture debate, but, as

Downloaded from id-blockchain.idea.gov.vn on
by guest

Candland shows, so much of the information "revealed" was really only a projection of beliefs previously held by the investigating scientists. Candland then turns to "clever animals." We learn how the investigation of "Clever Hans," the German horse who could calculate square roots, proved to be a first step in the direction of behaviorism (researchers found that Hans was being tipped off by the subtle and unwitting body language of his owner and other observers, who would bend almost imperceptibly at the waist with every hoof beat, and stand erect when the correct count was reached). And Candland discusses the many attempts to communicate with our closest neighbor, the apes. We read of Richard Lynch Garner's 1892 experiment living with chimpanzees in Gabon (he taught one to say the French word "feu"), and of Gua, raised by W.N. and L.A. Kellogg alongside their own son Donald, and of the latest successes of teaching sign

language to such precocious apes as Sarah, Sherman, Austin, and Koko. Throughout, Candland illuminates the boldest and most intriguing efforts yet to extend our world to that of our fellow creatures. And he shows that, in the end, our effort to "make contact" is a reflection of the way in which we as a species create and order our universe. Humans have long shown a wish to connect with the silent minds around them. In assembling and interpreting the compelling tales in this book, Candland offers us a new understanding not only of the animal kingdom, but of the very nature of humanity, and our place in the great chain of being.

Only Connect: A Cultural History of Broadcasting in the United States - Michele Hilmes 2013-02-15

ONLY CONNECT is a comprehensive history of American broadcasting from its earliest days in radio, through the rise of television, to the current era of digital media and the Internet. It presents broadcasting as a vital component of American cultural identity, placing the development of U.S. radio, television, and new media in the context of social and cultural change. Each chapter opens with a discussion of the historical period, thoroughly traces the development of media policy, the growth of media industries, and the history of U.S. broadcast programming, and closes with

a look at the major ways that radio and television have been understood and discussed throughout American history. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Crisis Intervention Handbook - Albert R. Roberts 2005-07-14

As a result of the growing amount of acute crisis events portrayed in the media that impact the lives of the general public, interest in crisis intervention, response teams, management, and stabilization has grown tremendously in the past decade. However, there exists little to no literature designed to give timely and comprehensive help for crisis intervention teams. This is a thorough revision of the first

complete and authoritative handbook that prepares the crisis counselor for rapid assessment and timely crisis intervention in the 21st century. Expanded and fully updated, the Crisis Intervention Handbook: Assessment, Treatment, and Research, Third Edition focuses on crisis intervention services for persons who are victims of natural disasters, school-based and home-based violence, violent crimes, and personal or family crises. It applies a unifying model of crisis intervention, making it appropriate for front-line crisis workers-clinical psychologists, social workers, psychiatric-mental health nurses, and graduate students who need to know the latest steps and methods for intervening effectively with persons in acute crisis.

Developmental Psychopathology, Risk, Resilience, and Intervention

- Dante Cicchetti 2016-02-29

Examine the latest research merging nature and nurture in pathological development
Developmental

Psychopathology is a four-volume compendium of the most complete and current research on every aspect of the field. Volume Four: Genes and Environment focuses on the interplay between nature and nurture throughout the life stages, and the ways in which a child's environment can influence his or her physical and mental health as an adult. The discussion explores relationships with family, friends, and the community; environmental factors like poverty, violence, and social support; the development of coping mechanisms, and more, including the impact of these factors on physical brain

development. This new third edition has been fully updated to incorporate the latest advances, and to better reflect the increasingly multilevel and interdisciplinary nature of the field and the growing importance of translational research. The relevance of classification in a developmental context is also addressed, including DSM-5 criteria and definitions. Advances in developmental psychopathology are occurring increasingly quickly as expanding theoretical and empirical work brings about dramatic gains in the multiple domains of child and adult development. This book brings you up to date on the latest developments surrounding genetics and environmental influence, including their intersection in experience-dependent brain development. Understand the impact of childhood adversity on adulthood health Gauge the effects of violence, poverty, interparental conflict, and more Learn how peer, family, and community relationships

drive development Examine developments in prevention science and future research priorities Developmental psychopathology is necessarily interdisciplinary, as development arises from a dynamic interplay between psychological, genetic, social, cognitive, emotional, and cultural factors. Developmental Psychopathology Volume Four: Genes and Environment brings this diverse research together to give you a cohesive picture of the state of knowledge in the field.

Tube of Plenty - Erik Barnouw
1990-05-31

Based on the classic History of Broadcasting in the United States, Tube of Plenty represents the fruit of several decades' labor. When Erik Barnouw--premier chronicler of American broadcasting and a participant in the industry for fifty years--first undertook the project of recording its history, many viewed it as a light-weight literary task concerned mainly with "entertainment" trivia. Indeed, trivia such as that found in quiz programs do

Downloaded from id-blockchain.idea.gov.vn on

appear in the book, but Barnouw views them as part of a complex social tapestry that increasingly defines our era. To understand our century, we must fully comprehend the evolution of television and its newest extraordinary offshoots. With this fact in mind, Barnouw's new edition of *Tube of Plenty* explores the development and impact of the latest dramatic phases of the communications revolution. Since the first publication of this invaluable history of television and how it has shaped, and been shaped by, American culture and society, many significant changes have occurred. Assessing the importance of these developments in a new chapter, Barnouw specifically covers the decline of the three major networks, the expansion of cable and satellite television and film channels such as HBO (Home Box Office), the success of channels catering to special audiences such as ESPN (Entertainment and Sports Programming Network) and MTV (Music Television), and

the arrival of VCRs in America's living rooms. He also includes an appendix entitled "questions for a new millennium," which will challenge readers not only to examine the shape of television today, but also to envision its future.

State of the World's Children 2013 - UNICEF. 2013

One in every seven children is disabled. Children with disabilities are among the most likely to be marginalized, poor and vulnerable. UNICEF is committed to improving the lives of children, particularly those who face the greatest disadvantages. The report will investigate the web of barriers disabled children face: discrimination, harmful norms and the lack of accurate information. The report will analyse and provide good-practice guidance on: inclusive health and education; prevention; nutrition; protection from violence, exploitation and abuse; emergency response; institutionalization; and the

Parenting Stress - Kirby

Deater-Deckard 2008-10-01

All parents experience stress as they attempt to meet the challenges of caring for their children. This comprehensive book examines the causes and consequences of parenting distress, drawing on a wide array of findings in current empirical research. Kirby Deater-Deckard explores normal and pathological parenting stress, the influences of parents on their children as well as children on their parents, and the effects of biological and environmental factors. Beginning with an overview of theories of stress

and coping, Deater-Deckard goes on to describe how parenting stress is linked with problems in adult and child health (emotional problems, developmental disorders, illness); parental behaviors (warmth, harsh discipline); and factors outside the family (marital quality, work roles, cultural influences). The book concludes with a useful review of coping strategies and interventions that have been demonstrated to alleviate parenting stress.

Bioethics - Peter A. Clark 2016-12-29

The main strength of this book is that it examines the challenges facing the field of Bioethics today from medical, ethical and legal perspectives. A critical exchange of ideas from professionals in interdisciplinary fields allows everyone to learn and benefit from the insights gained through others' experiences. Examining, analyzing and understanding these complex medical-ethical-legal issues and cases and how they are resolved will serve as a

paradigm for all professionals who will be confronted with these complex bioethical issues now and in the future. The more we face these challenges directly, examine them critically and debate them enthusiastically the more knowledge will be gained and hopefully, we will gain more practical wisdom.

Play Development in Children with Disabilities - Serenella Besio 2016

This book is the result of the first two-year work of Working Group 1 of the network "LUDI - Play for children with disabilities". LUDI is an Action (2014-2018) financed by COST; it is a multidisciplinary network of more than 30 countries and almost 100 researchers and practitioners belonging to the humanistic and technological fields to study the topic of play for children with disabilities within the framework of the International Classification of Functioning Disability and Health (WHO, 2001). The principal objective of this book is to bring the LUDI contribution to the important topic of play in children with disabilities, because today an international consensus on the definition of play and disabilities is still lacking. The process of ensuring equity in the exercise of the right to play for children with disabilities requests three actions: to approach this topic through a "common language", at least all

over Europe; to put play at the centre of the multidisciplinary research and intervention regarding the children with disabilities; to grant this topic the status of a scientific and social theme of full visibility and recognized authority. Children with disabilities face several limitations in play, due to several reasons: impairments; playgrounds, toys and other play tools that are not accessible and usable; environments and contexts that are not accessible nor inclusive; lack of educational awareness and intentionality; lack of specific psycho-pedagogical and rehabilitative competence; lack of effective intervention methodologies. Moreover, disabled children's lives are dominated by medical and rehabilitative practices in which play is always an activity aiming to reach an objective or to provoke an improvement; play for the sake of play is considered a waste of time. The concept of play for the sake of play strongly refers to the distinction between play activities and play-like

activities. Play activities are initiated and carried out by the player (alone, with peers, with adults, etc.) for the only purpose of play itself (fun and joy, interest and challenge, love of race and competition, ilinx and dizziness, etc.). They have of course consequences on growth and development, but these consequences are not intentionally pursued. Play-like activities are initiated and conducted by an adult (with one or more children), in educational, clinical, social contexts; they are playful and pleasant, but their main objective is other than play: e.g., cognitive learning, social learning, functional rehabilitation, child's observation and assessment, psychological support, psychotherapy, etc. This book, then, contributes to a clear distinction between play and play-like activities that, hopefully, will bring to new developments in play studies.

The Child with a Limb Deficiency - John A. Herring
1998

Experts in the field of

orthopaedic surgery, physical therapy, child psychology, and prosthetics and orthotics discuss the aetiology, diagnosis and treatment of genetic and traumatic limb deficiencies in children. Topics covered in the book include: classification and treatment of congenital femoral deficiency, including Syme's amputation, rotationplasty, and limb lengthening; classification and treatment of fibular deficiency, tibial deficiency, epidemiology, prevention, and treatment of acquired amputations; prosthetic management; management of upper extremity deficiencies and of multiple amputations; and outcomes measures.

"the rights of small nations," but the author, like countless other Hungarians, is literally "on the run from Communism." He has been living in exile since 1945 because of his anti-communist views. Although he was never a member of any party, the Communist regime of Hungary, with typical effrontery, demanded that the U.S.A. authorities "hand Louis Marschalko over as a war criminal." A former special correspondent of two leading newspapers in pre-Communist Hungary, Marshalko is a brilliant novelist, playwright and poet and has many hundreds of articles in his credit. *WORLD CONQUERORS* expresses some of the bitterness and contempt of enslaved Europeans for the rulers of the "victorious nations." It shows that by being urged to throw off the German yoke, the central European nations were tricked into becoming satellites of the Soviet. *WORLD CONQUERORS* indites the real war criminals. It gives horrifying glimpses of the agony behind the Iron

Curtain and describes the plot to extend the slave system to the Western world. Thousands of copies of the Hungarian edition have been sold and this English translation is published to warn the West. It is written by one who is a firm friend of the English-speaking people but an implacable foe of their vacillating and corrupt governments.

The Spirit of Carnival - David K. Danow 2004-05-01

The remarkable meshing of these two diametrically opposed yet inextricably intertwined facets of literature (and of life) makes for an intriguing sphere of investigation, for the carnival spirit is animated by a human need to dissolve borders and eliminate boundaries - including, symbolically, those between life and death - in an ongoing effort to merge opposing forces into new configurations of truth and meaning.

one man's struggle against totalitarianism. A mid-level official in a provincial town, Friedrich Kellner kept a secret diary from 1939 to 1945, risking his life to record Germany's path to dictatorship and genocide and to protest his countrymen's complicity in the regime's brutalities. Just one month into the war he is aware that Jews are marked for extermination and later records how soldiers on leave spoke openly about the mass murder of Jews and the murder of POWs; he also documents the Gestapo's merciless rule at home from euthanasia campaigns against the handicapped and mentally ill to the execution of anyone found listening to foreign broadcasts. This essential testimony of everyday life under the Third Reich is accompanied by a foreword by Alan Steinweis and the remarkable story of how the diary was brought to light by Robert Scott Kellner, Friedrich's grandson.

Trauma and Cinema - E. Ann Kaplan 2004-02-01

This volume addresses the

relation of trauma to transnational modern mass media. The first of its kind, *Trauma and Cinema: Cross-Cultural Explorations* provides ten essays which explore the ways trauma works itself out as media — in images in (and as) film, photography, and video — in global cultural flows. The focus of our volume on the matrix of trauma, visual media and modernity seeks to engage and go beyond current tendencies in trauma studies.

The book discusses how trauma presented in the media spills over national boundaries and can be found in images across divergent cultures in Africa, Asia, Australia, Europe and America. From the Holocaust to the Chinese Cultural Revolution, from Taiwan's colonial experience to the catastrophe of Hiroshima, from attempted annihilation of Australian Aborigines to attempted reconciliation in South Africa, these essays offer the reader a plethora of images of trauma for comparison and contrast.

[Final Report](#) - International Commission on the Holocaust in Romania 2005

The International Commission on the Holocaust in Romania was established in October 2003 on the initiative of Ion Iliescu, the President of Romania; this final report was presented to him in November 2004. The aim of the Commission was to research the facts and determine the truth about the Holocaust in Romania during World War II. The report examines various aspects of the state-organized participation of Romania in the mass murder of Jews in Romania and in Romanian-controlled territories, as well as in northern Transylvania where the genocide was perpetrated by the Nazis and their Hungarian allies. Inter alia, it discusses antisemitism and the evolution of Romanian

anti-Jewish policies from the late 1930s to 1944, the impact of the Soviet annexation of Bessarabia and Northern Bukovina on antisemitism in Romania, anti-Jewish incidents in 1940 and the pogroms in Bucharest and Iași, mass murders of Jews in the recaptured provinces and deportation to Transnistria in 1941, mass murder of Jews in Odessa and in Transnistrian camps, the "Romanianization" of the economy and the expropriation of Romanian Jews, the reaction of the Jewish community in Romania to anti-Jewish policies, and the personal responsibility of Ion Antonescu for the genocide. Relates, also, to war crimes trials held in Romania, and to the trivialization of the Holocaust and its "selective" and outright denial in postwar Romania.
