Imagination in Educational Theory and Practice - Robert Fitzgerald 2010-04-16
Inspired by papers developed for the 6th International Conference on Imagination and Education: Imaginative Practice, Imaginative Inquiry (Canberra, Australia, 2008), this book connects a cross-section of educators, researchers and

administrators in a dialogue and exploration of imaginative and creative ways of teaching, learning and conducting educational inquiry.

Imagination is a concept that spans traditional disciplinary and professional boundaries. The authors in this book acknowledge diverse theoretical and practical allegiances, but they concur that imagination will play an essential role in the building of new foundations for education in the 21st century. From our conception of human development through our ways of educating teachers to the teaching of mathematics, they argue for the centrality of imagination in the realization of human potential, and for its relevance to the most urgent problems confronting our world. Introduced by a wide-ranging literature review and extensively referenced, this volume makes an important contribution to a rapidly expanding field.

Geometric Structures - Douglas B. Aichele 2007-04

For prospective elementary and

middle school teachers. This text provides a creative, inquiry-based experience with geometry that is appropriate for prospective elementary and middle school teachers. The coherent series of text activities supports each student's growth toward being a confident, independent learner empowered with the help of peers to make sense of the geometric world. This curriculum is explicitly developed to provide future elementary and middle school teachers with experience recalling and appropriately using standard geometry ideas, experience learning and making sense of new geometry, experience discussing geometry with peers, experience asking questions about geometry, experience listening and understanding as others talk about geometry, experience gaining meaning from reading geometry, experience expressing geometry ideas through writing, experience thinking about geometry, and experience doing geometry. These

activities constitute an "inquiry based" curriculum. In this style of learning and teaching, whole class discussions and group work replace listening to lectures as the dominant class activity.
