Mini Nutritional Assessment (MNA) - Bruno J. Vellas 1999

This book is the first of a new series which will

present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical & Performance Programme aimed at adult nutrition. Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in those being in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated instruments to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in the elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the efficacy of nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people when they enter hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of

care and length of stay in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dieticians, enabling them to better detect, recognise and start treatment of malnutrition in the elderly.

Translated here into English for the first time, The Court Midwife contains riveting

birthing scenes, sworn testimonials by former patients, and a brief autobiography.

Oxygen-Ozone Therapy - V. Bocci 2013-06-29
When I was about fifteen, my Biological Sciences teacher, Prof. N. Benacchio, lent me a book by Paul de Kruif "The Microbe Hunters" and I

remained fascinated by infectious diseases. I was intrigued by the potency of virulent bacteria which are constantly trying to invade our bodies and often overcome what today we call innate and adoptive immunity. Indeed, shortly after that, I was struck by his tragic death due to peritonitis. Later, while studying medicine (although medical knowledge in the 1950s was almost primordial compared with today), I soon realised how the various biological systems were wonderfully organised but at the same time frail and how our life could end in a few minutes. Slowly it became obvious that our "wellness" was the result of a dynamic and very unstable equilibrium between health and disease. This unstable equilibrium could be broken forever if the body's response could not reverse the pathological state. I stuck a sort of poster on the wall of my room with these three words and connecting arrows: HEALTH ~? DISEASE -? DEATH As I don't believe in another world after death, it became obvious to me that we should

make every possible effort not only to delay death, but to try always to shift the equilibrium to the left. In this book, I will try to show that this can be achieved, as a last resort, even with ozonotherapy.

Radical Remission - Kelly A. Turner, PhD
2014-03-18

In her New York Times bestseller, *Radical Remission: Surviving Cancer Against All Odds*, Dr. Kelly A. Turner, founder of the Radical Remission Project, uncovers nine factors that can lead to a spontaneous remission from cancer—even after conventional medicine has failed. While getting her Ph.D. at the University of California, Berkley, Dr. Turner, a researcher, lecturer, and counselor in integrative oncology, was shocked to discover that no one was

studying episodes of radical (or unexpected) remission—when people recover against all odds without the help of conventional medicine, or after conventional medicine has failed. She was so fascinated by this kind of remission that she embarked on a ten month trip around the world, traveling to ten different countries to interview fifty holistic healers and twenty radical remission cancer survivors about their healing practices and techniques. Her research continued by interviewing over 100 Radical Remission survivors and studying over 1000 of these cases. Her evidence presents nine common themes that she believes may help even terminal patients turn their lives around.

[Age and Gender Considerations in Psychiatric Diagnosis](#) - William E. Narrow 2008-05-20
Written to help identify major gaps in our knowledge of how gender and age affect psychiatric diagnoses and to stimulate much-needed research to fill these gaps, *Age and Gender Considerations in Psychiatric Diagnosis*

serves as both a valuable short-term source for the DSM-V Task Force and its disorder-specific workgroups, and a long-term guide for future studies that will contribute to revised psychiatric classifications in these three areas. Here, 47 experts present findings in three areas of psychiatric research that historically have been neglected but rightfully have received increasing attention in recent years and thus are worthy of investigation into their clinical features, etiology, and course: 1. Significant gender differences in prevalence, symptom profiles, and risk factors for mental disorders, including neurodevelopmental, neurophysiological, and environmental factors for men and women that cut across diagnostic categories—for example, the critical importance of gender in how psychiatric illness develops and presents; DSM's approach to gender to date; and relevant research findings and gaps in the epidemiology, etiology, and pathophysiology of disorders and the gender-related expression of psychopathology, including

the controversial and complex question of whether DSM should have different diagnostic criteria for men and women. 2. Mental disorders in infancy and early childhood, including diagnosis and measurement of psychopathology; PTSD and social and cognitive factors related to the experience of stress; reactive attachment disorder (unique in part because of its specificity to early childhood); mood and anxiety disorders and difficulties in diagnosis; sleep disorders, including two new disorders, Night-Waking Dysomnia and Sleep-Onset Dysomnia; feeding disorders, including the need to address overeating and overfeeding (especially given the alleged U.S. epidemic of obesity); early childhood manifestations of behavior disorders; and early symptoms and diagnosis of autism. 3. Mental disorders in the elderly, such as dementia and depression, once considered normal consequences of aging but now understood to represent mental disorders, including the need to identify specific brain

structure abnormalities, biomarkers, and the many contributing biological, psychosocial, and environmental factors of mental illness in late life and to understand their roles in the elderly to better diagnose and monitor disease progression. Written for clinicians and researchers alike, this thought-provoking compendium contributes critical information that helps enhance our understanding of the causes of mental disorders, develop effective preventive and treatment interventions, and inform future editions of DSM and ICD. The Lost Art of Healing - Bernard Lown
1999-02-02

The real crisis in medicine today is not about economics, insurance, or managed care--it's about the loss of the fundamental human relationship between doctor and patient. In this

wise and passionate book, one of our most eminent physicians reacquaints us with a classic notion often overlooked in modern medicine: health care with a human face, in which the time-honored art of healing guides doctors in their approach to patient care and their use of medical technology. Drawing on four decades of practice as a cardiologist and a vast knowledge of literature and medical history, Dr. Lown probes the heart and soul of the doctor-patient relationship. Insightful and accessible to all, The Lost Art of Healing describes how true healers use sympathetic listening and touch to hone their diagnostic skills, how language affects the perception of illness, how doctors and patients can cultivate a relationship of trust, and how patients can obtain the most complete and beneficial care through a combination of healing techniques and conventional practices. As Dr. Lown explains, the art of healing does not mean abandoning the spectacular advances of modern science, but rather incorporating them into a

sensitive, humane, enlightened approach to medical care. With its urgent message and poignant, fascinating vignettes, *The Lost Art of Healing* is a book of vital, universal importance. *Oxford Textbook of Palliative Medicine* - Nathan I. Cherny 2015

Emphasising the multi-disciplinary nature of palliative care the fourth edition of this text also looks at the individual professional roles that contribute to the best-quality palliative care.

The Body and Its Symbolism - Annick de Souzenelle 2015-11-01

This intricate and profound exploration of Kabbalistic symbolism as applied to the human body is a classic in French esoteric circles. It is the life work of psychotherapist Annick de Souzenelle, whose tremendous depth of thought has been partially inspired by the depth psychology of C. G. Jung. De Souzenelle incorporates the symbolism of the Hebrew language with biblical references and her understanding of Kabbalistic spirituality to

present the Kabbalistic tree of life as a pattern of the human body in all its various parts and vital organs, from the bottom of the feet to the top of the head. Not only is hers an important work in the field, it also affords some flavor of the rich French esoteric tradition. *The Body and Its Symbolism* will be sought after by advanced students of the Western esoteric traditions, especially Kabbalah.

Radiation Therapy Techniques for Gynecological Cancers - Kevin Albuquerque 2019

This book is a practical guide to the use of modern radiation therapy techniques in women with gynecological cancers. Step-by-step instruction is provided on simulation, contouring, and treatment planning and delivery for cancers of the cervix, endometrium, vagina, and vulva. Beyond external beam radiation delivery, full details are presented on three-dimensional brachytherapy at all sites for which it is applicable. Moreover, in-depth guidance is offered on the various advanced techniques of radiation delivery, including intensity-modulated radiation therapy, image guidance for external beam and brachytherapy, and stereotactic body

radiotherapy. Radiation therapy is a critical component of the multidisciplinary management of gynecological tumors. With modern technology, both external beam radiation and brachytherapy can be delivered in a highly conformal way. This requires precise contouring and accurate planning techniques. In clearly describing the indications for and the delivery of quality radiation therapy for gynecological tumors, this book will benefit radiation oncologists, medical physicists, medical dosimetrists, radiation therapists, and radiotherapy residents.

Local Flaps in Head and Neck Reconstruction - Ian T. Jackson 2007-06-30

This book is truly a classic, beloved by plastic surgeons throughout the world. Its strength lies in its simple, elegant approach to solving common reconstructive problems encountered by plastic surgeons at all levels of training. Its appeal transcends specialty interests, with

aesthetic and reconstructive surgeons alike finding this book to be an invaluable resource for daily practice. Its comprehensive coverage makes it an essential addition to any surgeon's library. Totally revised and updated with color throughout, this new edition has been totally revised and updated with over 150 additional pages, two new chapters, and numerous new cases, flaps, and problems. Additionally, there are color illustrations, summary tables highlighting the best flaps for various clinical situations, annotated bibliographies, and much, much more. Throughout these pages, the reader benefits from Dr. Jackson's enormous experience and wisdom as he makes note of special tips, critical maneuvers, and important principles that warrant emphasis. Each flap is accompanied by a description of potential problems, and each anatomic area for reconstruction ends with a technique of choice so that the reader can understand the decision-making process that is involved in flap selection. The book begins with

a chapter on basic principles, which reviews the important oncologic concerns that must precede any reconstructive-surgery procedure. Principles of tissue movement and flap design are accompanied by drawings that aid the reader in planning. The next seven chapters address each anatomic region. Alternate methods for closing defects in each region are presented. Both simple and complex solutions are detailed. Each reconstructive option is presented in great detail with operative photos as well as beautiful illustrations to depict flap design, elevation, and closure, and to more clearly explicate complex flap reconstructions for difficult problems. Common mistakes and the limitations of each flap are clearly delineated. Chapters on each anatomic region conclude with new summary tables that help the reader quickly identify the best reconstructive options for specific

problems. Two Totally New Chapters The final two chapters are new to this edition-Tissue Expansion and Problems and Complication. The chapter on tissue expansion fully details the advantages to be gained from tissue expansion and the applications in each area of the head and neck when local flaps are planned. The Problems and Complications chapter covers common problems encountered in head and neck reconstruction as well as avoidance and treatment of complications should they occur. It concludes with a section on tricks and innovations, which discusses diverse topics such as the use of scarlet red for wound healing, the aesthetic repair of torn earlobes, and the repair of cocaine-induced palatal fistula. There is clearly a wealth of information and much to be learned and applied by surgeons at all levels of expertise.
