Robust Plastic Product Design: A Holistic Approach - Vikram Bhargava 2017-12-11

Tooling, molding, secondary operations, material selection, evaluation and testing, design, project management, costing, value engineering, international supplier management and enhancement, and more: this book provides a broad insight from the author's over 40 years of experience in the plastics industry. Aimed at both technical and non-technical personnel involved with plastic product design and manufacturing, this book shows how having the big picture leads to effective solutions and high-quality products. Numerous case studies of product failures exemplify the key concepts. The reader will benefit from the author's unique depth and breadth of knowledge and experience as a team manager and hands-on contributor in all aspects of plastics, involving extremely robust, mission-critical products. Plastics Process Analysis, Instrumentation, and Control - Johannes Karl Fink 2021-03-09

This book focuses on plastics process analysis, instrumentation for modern manufacturing in the plastics industry. Process analysis is the starting point since plastics processing is different from processing of metals, ceramics, and other materials. Plastics materials show unique behavior in terms of heat transfer, fluid flow, viscoelastic behavior, and a dependence of the previous time, temperature and shear history which determines how the material responds during processing and its end use. Many of the manufacturing processes are continuous or cyclical in nature. The systems are flow systems in which the process variables, such as time, temperature, position, melt and hydraulic pressure, must be controlled to achieve a satisfactory product which is typically specified by critical dimensions and physical properties which vary with the processing

conditions. Instrumentation has to be selected so that it survives the harsh manufacturing environment of high pressures, temperatures and shear rates, and yet it has to have a fast response to measure the process dynamics. At many times the measurements have to be in a non-contact mode so as not to disturb the

melt or the finished product. Plastics resins are reactive systems. The resins will degrade if the process conditions are not controlled. Analysis of the process allows one to strategize how to minimize degradation and optimize end-use properties.
