Real-World Solutions for Diversity, Strategic Change, and Organizational Development: Perspectives in Healthcare, Education, Business, and Technology -

Burrell, Darrell Norman 2023-09-11

The great resignation, quiet quitting, #MeToo workplace cultures, bro culture at work, the absence of more minorities in cybersecurity, cybercrime, police brutality, the Black Lives Matter protests, racial health disparities, misinformation about COVID-19, and the emergence of new technologies that can be leveraged to help others or misused to harm others have created a level of complexity about inclusion, equity, and organizational efficiency in organizations in the areas of healthcare, education, business, and technology. *Real-World Solutions for Diversity, Strategic Change, and Organizational Development: Perspectives in Healthcare, Education, Business, and Technology* takes an interdisciplinary academic approach to understand the real-world impact and practical solutions-oriented approach to the chaotic convergence and emergence of organizational challenges and complex issues in healthcare, education, business, and technology through a lens of ideas and strategies that are different and innovative. Government Budgeting and Financial Management in Practice - Gerald J. Miller 2017-09-25

The right turn in U. S. politics has increased conflict over both ends and means in government budgeting and financial management. Overlapping and competing views of the way the world works drive finance officials' practice. Taking a new look at public financial management that acknowledges the multiple, competing realities, *Government Budgeting and Financial Management in Practice: Logics to Make Sense of Ambiguity* examines transaction cost economics and other small government, managed-by-the-market techniques as the latest reincarnation of public budgeting and financial management orthodoxy. Gerald J. Miller reviews new research on the continuing validity of the political dimension of government finance decisions and the multiple, intensely argued constructions of reality the finance official must make sense of. Miller discusses major advances in interpretive approaches to budgeting and finance and how they dominate writing in the broader field of public administration. He also examines the effects of the explosion of information systems, new budget techniques, nonconventional ways of spending, and new technologies. The book uses a question as the motivating force to understand some facets of today's government budgeting, finance, and financial management: where do the critical assumptions come from to drive financial management? Miller takes the history of reform, developments in the field and the logics finance officials say they use as sources for these assumptions and examines what they reveal about constructions of the government finance world. Exploring new avenues of financial management thinking, the book discusses ambiguity and interpretations that move the unclear

preferences, ends, and goals toward consensus. The author identifies an alternative approach to research that explains important facets of financial management. This approach is drawn directly from practice, events and problems in public organizations and from the creedal bent of many political actors in competition. *Puzzles of Finance* - Mark P. Financial Management: Principles and Applications - J

William Petty 2015-05-20

The sixth edition of Financial Management provides students with an overview of financial management suited to the first course in finance. The focus of the text is on the big picture, providing an introduction to financial decision making grounded in current financial theory and the current state of world economic conditions. Attention is paid to both valuation and capital markets, as well as their influence on corporate financial decisions. The 10 basic principles of finance are introduced in the first chapter and woven throughout the text, to give students a solid foundation from which to build their knowledge of finance. The goal of this text is to go beyond teaching the tools of a discipline or a trade and help students gain a complete understanding of the subject. This will give them the ability to apply what they have learnt to new and as yet unforeseen problems—in short, to educate students in finance.
