Drug Therapy for the Elderly - Martin Wehling 2012-08-17

With people aged 65 years and older currently making up the fastest

growing age group throughout the world, the demographic revolution of an aging society will inevitably lead to increased pressure to develop a rationalistic and age-tailored process of diagnosis and treatment among the elderly. As aging people often suffer from several chronic diseases and are being treated with multiple medications concurrently, unwanted drug interactions occur more frequently. Whereas recent approaches have recommended to remove particular drugs from the medication regimen to avoid adverse effects, Drug Therapy for the Elderly underlines both indispensable and dispensable elements of drug treatment in order to provide an overall assessment of drugs suitable for the aged. In view of the multimorbidity and polypharmacy situations experienced

by elderly patients, this book takes into account the special needs and requirements shown by this group, thus serving as a timely reference for physicians who treat the elderly.

outcomes. The book makes recommendations on clinical applications and future research, while helping to elucidate the benefits and promise of non-invasive sperm selection techniques. A distinguished team of scientists, embryologists, and urologists, with expertise in male infertility and ART, contributes to this original and valuable reference guide meant for academics, researchers, and professionals in the field of reproductive medicine who need an update on the current status of the study and practice of non-invasive sperm selection techniques.

Learning Geriatric Medicine - Regina Roller-Wirnsberger 2018-03-20

This textbook presents hands-on training material for medical students. The style reflects the need for practice-based teaching with a modern edge in daily clinical routine; accordingly, it also employs online material and pocket cards. Each chapter begins with specific learning objectives, which are cross-referenced with the European curriculum for undergraduate medical

education released by the European Union of Medical Specialists (UEMS) together with the European Union Geriatric Medicine Society (EUGMS), as well as the minimum geriatric competences for medical students established by the American Geriatrics Society (AGS). World-renowned European experts in practicing and teaching the interdisciplinary field of Geriatrics contributed to this work, with the aim of offering the new generation of health professionals a global perspective on one of the greatest public health challenges of our time: the management of the steadily increasing number of older, multimorbid, and vulnerable persons. The major strength of this book – published under the auspices of the EUGMS – is its pragmatic, goal-

oriented approach, which makes it suitable for bedside learning and patient-centered medicine; further, all of the chapters are firmly based on the pillars of the ageing process in all of its biological aspects, helping readers understand the pathophysiology of and rationale behind interventions for the main geriatric syndromes and disorders.

Elegy for Iris - John Bayley
2013-10-15

"I was living in a fairy story--the kind with sinister overtones and not always a happy ending--in which a young man loves a beautiful maiden who returns his love but is always disappearing into some unknown and mysterious world, about which she will reveal nothing." So John Bayley describes his life with his wife, Iris Murdoch, one of the greatest contemporary writers in the English-speaking world, revered for her works of philosophy and beloved for her incandescent novels. In *Elegy for Iris*, Bayley attempts to uncover the real Iris, whose mysterious world took on darker shades as she descended into Alzheimer's disease. *Elegy for Iris* is a luminous memoir about the beauty of youth and aging, and a celebration of a brilliant life and an undying love.

Organ Transplantation in Times of Donor Shortage - Ralf J. Jox
2015-08-06

This book analyzes the reasons for

organ shortage and ventures innovative ideas for approaching this problem. It presents 29 contributions from a highly interdisciplinary group of world experts and upcoming professionals in the field. Every year thousands of patients die while waiting for organ transplantation. Health authorities, medical professionals and bioethicists worldwide point to the urgent and yet unsolved problem of organ shortage, which will be even intensified due to the increasing life expectancy. Even though the practical problem seems to be well known, the search for suitable solutions continues and often restricts itself by being limited through disciplinary and national borders. Combining philosophical reflection with empirical results, this volume

enables a unique insight in the ethics of organ transplantation and offers fresh ideas for policymakers, health care professionals, academics and the general public.

Cancer Mapping - Peter Boyle

2012-12-06

The preceding decade has seen the production of many cancer atlases. As with other techniques of descriptive epidemiology, these atlases have proved valuable in identifying areas for further research employing the methods of analytical epidemiology. However, the various cancer atlases produced to date have failed to provide a common format of presentation, which has limited their comparability and frustrated in a large measure any attempt to compare risks across

national boundaries, boundaries which in terms of environmental exposures may have little meaning. In this volume, many features of cancer atlases are presented and there are discussions on the areas where moves towards standardization could greatly increase the utility of the finished product. In contrast to topographic maps, i. e., representations of natural and man-made features on the surface of the earth, thematic maps concentrate on displaying the geographical occurrence and variation of a single phenomenon - the "theme" of the map. The link between thematic and base mapping is rather strong as the thematic information to be depicted is of greater value if displayed on an accurate base map. Further, the thematic map generally uses statistical data which are

frequently related to internal administrative boundaries for enumeration. The major reason for constructing a thematic map is to discover the spatial structure of the theme of the map and to then relate the structure to some aspects of the under lying environment.

The Stigma of Mental Illness -

Nicolas Ruesch 2022-10

The stigma and discrimination associated with their disorders can have effects in several areas of life: in social interactions, in work and healthcare settings, in the legal system and the media. little is done to reduce stigma and its impact. Kooperation und Integration – das unvollendete Projekt des

Gesundheitssystems - Andreas Brandhorst 2017-02-08
Eine an den Bedürfnissen der Patienten orientierte und bezahlbare Versorgung ist zukünftig nur möglich, wenn sich das deutsche Gesundheitswesen grundlegend wandelt. Wohin die Reise gehen sollte, zeigen die Gesundheitssysteme anderer Länder: Wir brauchen den Übergang zu einer integrierten, sektor- und berufsgruppenübergreifenden

Versorgung mit einer stärkeren dezentralen Verankerung der Prozesse und Strukturen. Erste Schritte in diese Richtung wurden Anfang des Jahrtausends eingeleitet. Doch in den letzten Jahren kamen diese Schritte ins Stocken. Namhafte Autoren aus Wissenschaft, Verbänden, Sozialversicherung, Verwaltung, Praxis und Industrie zeigen in diesem Buch auf, wie es in Richtung regionaler, integrierter Versorgungsformen weitergehen sollte. Mit seinem Erscheinen in der Reihe „Gesundheit. Politik – Gesellschaft – Wirtschaft“ (hrsg. von E.-W. Luthe und J. N. Weatherly) steht das Buch für die wachsende Erkenntnis, Gesundheitspolitik als interdisziplinäre Aufgabe zu betrachten.

Regulating Entrepreneurial Behaviour in European Health Care Systems -

Richard B. Saltman 2002

What have been the major trends in entrepreneurial behaviour and

regulation in European health care?*

To what degree do approaches to regulation and entrepreneurialism differ amongst subsectors and countries across Europe?*

What does the evidence show about successes and failures, and which successful options are open to policy-makers? A wide range of entrepreneurial initiatives have been introduced within European health care systems during the last decade. While these initiatives promised more efficient management, they also triggered concerns about reduced equity and quality in service provision. This book explores emerging regulatory strategies that seek to capture the benefits of entrepreneurial innovation without sacrificing the core policy objectives of a socially responsible health care system. It

opens with an extended essay on current trends and evidence across health care subsectors and across countries, presenting a wide range of alternatives for policy makers, and assessing their relative advantages and disadvantages. It then reviews entrepreneurialism and regulation in specific contexts (such as hospitals, primary health care, social services) and considers related issues including the impact of corruption and the potential lessons from deregulation of public utilities. *Regulating Entrepreneurial Behaviour in European Health Care Systems* brings together the perspectives of politics, economics, management, medicine, public health and law and will be a valuable resource for students, academics, practitioners and policy makers

concerned with health policy and health reform.

Essentials In Elbow Surgery - Samuel Antuña 2014-02-13

The idea of this book is very simple. Nowadays, there are many good, very comprehensive, "thick" books available on Elbow Surgery. Although they are useful to obtain discrete information about specific topics, they are too large to be a user friendly for a general orthopedic surgeon facing common elbow problems. The increasing interest among young surgeons on elbow problems is remarkable. It has been our experience throughout the years, teaching our residents and visitors, that there is a real demand for a less extensive book, easy to read, and with practical information about the most commonly encountered

problems of the elbow. This text would be enough to understand the common elbow practice for a general orthopedic surgeon and a guide to learn basic elbow surgery during training. There is nothing like this available today. It will be strongly oriented to practice, and all the authors, well known internationally for their expertise on elbow surgery, will be homogeneous in their message. Klaus Schulze Symposium on Processing and Applications of High Purity Refractory Metals and Alloys - P. Kumar 1994

This collection of papers is from Materials Week '93 held in Pittsburgh, Pennsylvania, October 17-21, 1993. It presents the latest advances in the processing and applications of high-purity refractory metals and alloys, as well

"Basics of Oncology" provides an easily understood and general overview of the basic medical, scientific and clinical aspects of cancer. Causes, pathology, clinical features, diagnostic investigations, treatments and outcomes are all carefully explained and discussed, both for cancers in general and for the common cancers in individual countries. The reader will thereby be provided with an understanding of how and why people develop cancer, how the body reacts to cancer, what can be done to prevent the disease, and how the various cancers are best diagnosed and treated. The book will serve as a sound basis for the more detailed or specific studies that may

be needed in different areas of practice and in different countries. It will be invaluable for students of medicine, nurse oncologists, students of medical sciences and other health professionals in all parts of the world.

Skin Cancer and UV Radiation - Peter Altmeyer
2012-12-06

UV radiation is recognized as the major risk factor for skin cancer. For the last three decades the incidence and mortality of skin

cancer have been increasing steadily in almost all parts of the world. Unfortunately, there have been very few advances in the management and treatment of skin cancer. In comparison to other malignant tumors, skin cancer offers the unique opportunity to identify this tumor at an early stage. Thus, there is strong interest in preventing death by early diagnosis and prompt treatment. The proceedings of the International Congress on Skin Cancer and UV Radiation which was held in Bochum Germany in October 1996, reflect the newest scientific standards in the field of skin cancer. The conference in Bochum was a platform for leading scientists from all over the world to discuss the complexity and diversity of UV radiation in its interaction with the

skin. Starting with basic science like physiology, immunology, and molecular biochemistry of the skin as influenced by UV radiation, the book presents a profound survey into the field of skin cancer by focusing on the latest scientific results in prevention, early detection, treatment, and epidemiology. The congress in Bochum in 1996 was organized to provide a starting point for coordinated European strategies against skin cancer with internationally renowned scientists. Orthogeriatrics - Paolo Falaschi 2020
This new open access edition supported by the Fragility Fracture Network aims at giving the widest possible dissemination on fragility fracture (especially hip fracture) management and notably in countries where this expertise is sorely needed. It has been extensively

revised and updated by the experts of this network to provide a unique and reliable content in one single volume. Throughout the book, attention is given to the difficult question of how to provide best practice in countries where the discipline of geriatric medicine is not well established and resources for secondary prevention are scarce. The revised and updated chapters on the epidemiology of hip fractures, osteoporosis, sarcopenia, surgery, anaesthesia, medical management of frailty, peri-operative complications, rehabilitation and nursing are supplemented by six new chapters. These include an overview of the multidisciplinary approach to fragility fractures and new contributions on pre-hospital care, treatment in the emergency room,

falls prevention, nutrition and systems for audit. The reader will have an exhaustive overview and will gain essential, practical knowledge on how best to manage fractures in elderly patients and how to develop clinical systems that do so reliably.

Music Therapy in Geriatric Care -

Alexander Wormit 2020-04-29

In music, people can make themselves heard, even if they cannot communicate verbally or words have long lost their meaning. Music (therapy) helps people find a way out of their isolation, find pleasure in making music together, or enjoy soothing sounds in an individual therapy setting. Its individualized design makes it adaptable for a wide range of moods that older people experience in everyday life, and can help in difficult situations.

Creative work in music therapy is always professionally grounded - subtly, playfully, or expressively, and is used to underscore mood. This book describes music therapy objectives and methods for older people. It provides many tips for specific sequences of interventions, for using instruments, choice of music, and related discussion topics.

Pulmonary Function in Mechanically Ventilated Patients - Salvador Benito 2012-12-06

This welcome addition to the series Update in Intensive Care and Emergency Medicine emerges from the most recent of a series of meetings organized by Alvar Net and Salvador Benito of Barcelona. This gathering provided a forum for European intensive care specialists to exchange ideas, knowledge and

experience on, the measurements feasible in mechanically ventilated patients. The scope was ambitious, ranging from basics like the measurement of airway pressure and blood gases to topics such as CT, MRI and the multiple inert gas elimination technique. The success of the meeting made publication a logical consequence. The book is unique in its breadth. The contributors, from numerous centers in Europe and North America, cover all techniques employed in intensive care units, describing indications, contraindications, procedures, biases and complications. This volume will be an invaluable source for intensive care specialists and other clinicians. Alongside practical descriptions of procedures they employ routinely (spirometry,

measurement of systemic vascular oxygen pressure, Swan-Ganz catheterization, BOPA etc.), they will find accounts of such sophisticated techniques as on line measurement of functional residual capacity, isotope determination of ventilation/perfusion ratios, diaphragmatic metabolism and peripheral oxygen exchange. I am especially happy to see the book published by Springer-Verlag, which has distinguished itself in the field of intensive care medicine.

Chemie Für Mediziner - Stephanie Grond 2020-08-18

Der ''Zeeck'' ist nicht umsonst das Standardwerk in der Chemie. Es ist Ihr perfekter Begleiter beim Einstieg in das Fach, aber auch bestens geeignet für alle schriftlichen oder mündlichen Testate während des

Semesters und natürlich auch später für alle Examina sowie zum Nachschlagen. Neu in der 10. Auflage: Zu 20 chemischen Vorgängen und Prozessen gibt es online audiovisuelle Lernhilfen, die sich über QR-Codes im Buch aktivieren lassen. In diesen Videos werden chemische Reaktionen in kleinen Animationen in ihren Einzelschritten erklärt und so das Verständnis schwieriger Sachverhalte wesentlich erleichtert. Die wichtigsten funktionellen Gruppen organischer Moleküle werden am Ende des Buches auf zwei Seiten übersichtlich und einprägsam dargestellt. Auch der Spaß kommt nicht zu kurz: hinter einigen QR-Codes verbirgt sich ein animierter Bunso

Hospitals in a Changing Europe -
Martin McKee 2002

* What roles do hospitals play in the health care system and how are these roles changing? * If hospitals are to optimize health gains and respond to public expectations, how should they be configured, managed, and sustained? * What lessons emerge from experiences of changing hospital systems across Europe? Hospitals of the future will confront difficult challenges: new patterns of disease, rapidly evolving medical technologies, ageing populations, and continuing budget constraints. This book explores the competing pressures facing policymakers across Europe as they struggle to respond to these complex challenges. It argues that hospitals, as part of a larger health system, should focus on enhancing health outcomes while also responding to public expectations. Adopting a

cross-national, cross-disciplinary perspective, the study assesses recent evidence on the factors driving hospital reform and the strategies used to improve organizational performance. It reviews the evidence from eastern as well as western Europe and combines academic research with real-world policy experience. It looks at the role of hospitals in enhancing health rather than simply processing patients. The book concludes that

hospitals cannot be managed in isolation from society and the wider health system, and that policymakers have a responsibility to define the broader health care goals that hospitals should strive to meet. *Hospitals in a Changing Europe* synthesizes current evidence in a readable and accessible form for all practitioners, policy-makers, academics and graduate level students concerned with health reform. **Obstetric Genetics** - Zoltan Papp 1990
