Enacting Electronic Government Success - J. Ramon Gil-Garcia 2012-02-25
Many countries around the world are investing a great amount of resources in government IT initiatives. However, few of these projects achieve their stated goals and some of them are complete failures. Therefore, understanding e-government success has become very important and urgent in recent years. In order to develop relevant knowledge about this complex phenomenon, researchers and practitioners need to identify and assess what are the main conditions, variables, or factors that have an impact on e-government success. However, before being able to evaluate these impacts, it is necessary to define what e-government success is and what some e-government success measures are. This book presents a review of both e-government success measures and e-government success factors. It

also provides empirical evidence from quantitative analysis and two in-depth case studies. Although based on sound theory and rigorous empirical analysis, the book not only significantly contributes to academic knowledge, but also includes some practical recommendations for government officials and public managers. Theoretically, the book proposes a way to quantitatively operationalize Fountain's enactment framework. Based on the institutional tradition, the technology enactment framework attempts to explain the effects of organizational forms and institutional arrangements on the information technology used by government agencies. According to Fountain (1995; 2001) the technology enactment framework pays attention to the relationships among information technology, organizations, embeddedness, and institutions. This framework is very well known in the e-government field, but is normally used for qualitative analysis and there is no previous proposal of how to use it with quantitative data. The book proposes variables to measure each of the different constructs in this framework and also tests the relationships hypothesized by Fountain's theory. Finally, using the advantages of the selected quantitative analysis technique (Partial Least Squares), the study also proposes some adjustments and extensions to the original framework in a theory building effort. Methodologically, the book reports on one of the

first multi-method studies in the field of e-government in general and e-government success in particular. This study uses a nested research design, which combines statistical analysis with two in depth case studies. The study begins with a statistical analysis using organizational, institutional, and contextual factors as the independent variables. An overall score representing e-government success in terms of the functionality of state websites is the dependent variable. Second, based on the statistical results two cases are selected based on their relative fitness to the model (residuals) and their position in the general ranking of website functionality (which includes four different measures). In order to complement the results of the statistical analysis, case studies were developed for the two selected states (New York and Indiana), using semi-structured interviews and document analysis. In terms of the statistical analysis, the book constitutes one of the first applications of Partial Least Squares (PLS) to an e-government success study. PLS is a structural equations modeling (SEM) technique and, therefore, allows estimating the measurement model and the structural model simultaneously. The use of this sophisticated statistical strategy helped to test the relationships between e-government success and different factors influencing it, as well as some of the relationships between several of the factors, thus allowing

exploring some indirect effects too.

Animal Subjects - Jodey Castricano 2008-05-20
Although Cultural Studies has directed sustained attacks against sexism and racism, the question of the animal has lagged behind developments in broader society with regard to animal suffering in factory farming, product testing, and laboratory experimentation, as well in zoos, rodeos, circuses, and public aquariums. The contributors to Animal Subjects are scholars and writers from diverse perspectives whose work calls into question the boundaries that divide the animal kingdom from humanity, focusing on the medical,

biological, cultural, philosophical, and ethical concerns between non-human animals and ourselves. The first of its kind to feature the work of Canadian scholars and writers in this emergent field, this collection aims to include the non-human-animal question as part of the ethical purview of Cultural Studies and to explore the question in interdisciplinary terms.

Power, Profit and Protest - Verity Burgmann 2020-08-04

'a provocative must-read text for an engaged public, offering a distinctive Australian take on corporate globalism, and grounding this in a robust theory of social change that emphasises material power and interests, along with symbolic power and ideology' James Goodman, University of Technology Sydney Social movements transformed Western societies in the 1960s and 1970s: feminism, black rights, the peace movement and gay liberation all radically altered how we think and how we live. What has happened to social movements since then? Can demonstrations and other forms of social activism still make a difference in Australia? Verity Burgmann argues that corporate globalisation has threatened or transformed established social movements, and sparked powerful new forms of social protest. She examines the impact of globalisation and neo-liberal government policies on the feminist and indigenous rights movements, showing how they have been affected by the

politics of backlash after decades of success. She explores the way in which the environment movement, too, has been affected by rising corporate political influence. She also analyses the emergence of anti-capitalist and anti-corporate activism and the profound challenges posed by this newest of social movements to the state, to society in general and to the labour movement in particular. These important factors in a changing political landscape. This book reflects on the significant changes which has taken place since Power and Protest was published in 1993.

Building Teachers: A Constructivist Approach to Introducing Education - David Jerner Martin 2013-06-25

Designed from the ground up with a constructivist framework, BUILDING TEACHERS: A CONSTRUCTIVIST APPROACH TO INTRODUCING EDUCATION, 2nd Edition helps future teachers create their own understanding of education. As the authors address the key topics generally covered in an introductory book, they encourage readers to develop their own understandings by connecting their prior knowledge, experiences, and biases with new experiences to which they will be exposed during the course. Highlights of the new edition include stronger standards integration and expanded material on diversity and technology. By interacting with the materials presented, rather than merely memorizing the book's content, readers learn what teaching is all about in an exploratory, inquiring, constructivist-based manner. In turn, they can help the children in their classrooms learn meaningfully. Available with InfoTrac Student Collections http://gocengage.com/infotrac.
