*Psychiatric Diagnosis and Classification* - Mario Maj 2002-04-22  
This book provides an overview of the strengths and limitations of the currently available systems for the diagnosis and classification of mental disorders, in particular the DSM-IV and the ICD-10, and of the prospects for future developments. Among the covered issues are: \* The impact of biological research \* The diagnosis of mental disorders in primary care \* The usefulness and limitations of the concept of comorbidity in psychiatry \* The role of understanding and empathy in the diagnostic process \* The ethical, legal and social aspects of psychiatric classification  
*Psychiatric Diagnosis & Classification* provides a comprehensive picture of the current state of available diagnostic and classificatory systems in psychiatry and the improvements that are needed.

*Prejudice, Stigma, Privilege, and Oppression* - Lorraine T. Benuto 2020-05-11

This book addresses the ways in which clinical psychologists ought to conceptualize and respond to the prejudice and oppression that their clients experience. Thus, the link between prejudice and oppression to

psychopathology is explored. Basic scientific information about prejudice is reviewed, and the current status of the major minority groups is explored. Chapters examine the role of prejudice and oppression in institutional structures such as the Diagnostic and Statistical Manual of Mental Disorders and professional organizations. The discussion addresses ways to assess these phenomena in individual cases and how to intervene in psychotherapy. The book ventures to evaluate the status of the profession of psychology with respect to prejudice, stigmatization, and oppression by critically examining evidence that the profession has responded adequately to these social problems. These issues are hard to talk about and are not well talked about in the field. This book is a push in the right direction.

**Cultural Competence in Applied Psychology** - Craig L. Frisby 2018-07-25

The first volume of its kind, this provocative book evaluates the construct of cultural competence from multiple perspectives. At the intersection of diverse disciplines and domains, contributors argue for greater clarity in understanding the cultural competence construct, a deeper level of analysis as to its multifaceted components, and call for concrete practical objectives and science-based means of measurement. Serious, nuanced discussion addresses challenges, strengths, and limitations of current cultural competence practice in terms of sociocultural concepts (e.g., race, ethnicity) and practical concepts (e.g., sensitivity in the therapeutic

relationship, treatment efficacy). In addition, contributors identify future directions for research, training, and practice with the potential to spur the further evolution of this clinically important construct. This timely book: Critiques the cultural competence construct and its evaluation as it is currently disseminated within applied psychology. Compares and contrasts how cultural competence is defined within clinical, school, and counseling psychology. Analyzes difficulties and challenges in understanding the cultural competence construct as evaluated through the lens of closely related fields outside of applied psychology. Spotlights complexities in cultural competence issues pertaining to specific populations. Sets out implications for education and training, offering a detailed outline for an ideal college course in cultural competence. With this level of reasoning and rigor, *Cultural Competence in Applied Psychology* is sure to stimulate long-overdue dialogue and debate among professionals across a wide variety of fields, such as clinical psychology, social work, child and social psychology, psychotherapy, school psychology, and counseling.

**Cultural Formulation** - Juan E. Mezzich 2008

The publication of the Cultural Formulation Outline in the DSM-IV represented a significant event in the history of standard diagnostic systems. It was the first systematic attempt at placing cultural and contextual factors as an integral component of the diagnostic process. The year was 1994 and its coming was ripe since the multicultural explosion due to migration, refugees, and globalization on the ethnic composition of the U.S. population made it compelling to strive for culturally attuned psychiatric care. Understanding the limitations of a dry symptomatological approach in helping clinicians grasp the intricacies of the experience, presentation, and course of mental illness, the NIMH Group on Culture and Diagnosis proposed to appraise, in close collaboration with the patient, the cultural framework of the patient's identity, illness experience, contextual factors, and clinician-patient relationship, and to narrate this along the lines of five major domains. By articulating the patient's experience and the standard symptomatological description of a case, the clinician may be better able to arrive at a more

useful understanding of the case for clinical care purposes. Furthermore, attending to the context of the illness and the person of the patient may additionally enhance understanding of the case and enrich the database from which effective treatment can be planned. This reader is a rich collection of chapters relevant to the DSM-IV Cultural Formulation that covers the Cultural Formulation's historical and conceptual background, development, and characteristics. In addition, the reader discusses the prospects of the Cultural Formulation and provides clinical case illustrations of its utility in diagnosis and treatment of mental disorders. Book jacket.

**Media Persuasion in the Islamic State** - Neil Krishan Aggarwal 2019-03-12

Since the declaration of the War on Terror in 2001, militant groups such as al-Qaeda and the Islamic State have used the internet to disseminate their message and persuade people to commit violence. While many books have studied their operational strategies and battlefield tactics, Media Persuasion in the Islamic State is the first to analyze the culture and psychology of militant persuasion. Drawing upon decades of research in cultural psychiatry, cultural psychology, and psychiatric anthropology, Neil Krishan Aggarwal investigates how the Islamic State has convinced people to engage in violence since its founding in 2003. Through analysis of hundreds of articles, speeches, videos, songs, and bureaucratic documents in English and Arabic, the book traces how the jihadist Abu Musab al-Zarqawi created a new culture and psychology, one that would pit Sunni Muslims against all others after the U.S.-led invasion of Iraq. Aggarwal tracks how Osama bin Laden and al-Zarqawi disagreed over the goal of militancy in jihad before reaching a détente in 2004 and how al-Qaeda in Iraq merged with five other groups to diffuse its militant cultural identity in 2006 before taking advantage of the Syrian civil war to emerge as the Islamic State. Aggarwal offers a definitive analysis of how culture is created, debated, and disseminated within militant organizations like the Islamic State. Psychiatrists, psychologists, and area-studies experts will

find a comprehensive, systematic method for analyzing culture and psychology so they can partner with political scientists, policy makers, and counterterrorism experts in crafting counter-messaging strategies against militants.

OTB MIGRANT PSYCHIATRY OTP C - Dinesh Bhugra 2021-02-04

Migrant psychiatry is an evolving subdiscipline within cultural psychiatry that deals with the impact of migration on the mental health of those who have migrated and those who work with these groups and provide services to them. Stress related to migration affects migrants and their extended families either directly or indirectly. The process of migration is not just a phase, but leads on to a series of adjustments, including acculturation, which may occur across generations. Factors such as changes in diet, attitudes and beliefs, and overall adjustment are important in settling down and making the individuals feel secure. This period of adjustment will depend upon the individual migrant's pre-migration experiences, migration process and post-migration experiences, but also upon an individual's personality, social support and emotional response to migration. Socio-demographic factors, such as age, gender, educational, and economic status will all play a role in post-migration adjustment. In order to understand the impact on individuals, not only the type of migration and different stressors, but also the types of psychological mechanisms at a personal level and the resources and processes at a societal level need to be explored. Despite the number of refugees and asylum seekers around the world increasing at an astonishing rate, the mental health needs of migrants are often ignored by policy makers and clinicians. The Oxford Textbook of Migrant Psychiatry is designed to serve as the comprehensive reference resource on the mental health of migrants, bringing together both theoretical and practical aspects of the mental health needs of refugees and asylum seekers for researchers and professionals. Individual chapters summarise theoretical constructs related to theories of migration, the impact of migration on mental health and adjustment, collective trauma, individual identity and diagnostic fallacies. The book also covers the practical aspects of patient management including cultural factors,

ethnopsychopharmacology, therapeutic interaction and therapeutic expectation, and psychotherapy. Finally, the book will examine special clinical problems and special patient groups. Part of the authoritative Oxford Textbooks in Psychiatry series, this resource will serve as an essential reference for psychiatrists, mental health professionals, general practitioners/primary care physicians, social workers, policy makers and voluntary agencies dealing with refugees and asylum seekers.

*Spiritual Needs in Research and Practice* - Arndt Büssing 2021-05-28

Based on information gathered from the internationally used Spiritual Needs Questionnaire, this book offers analyses of the spiritual and existential needs among different groups of people such as the chronically ill, elderly, adolescents, mothers of sick children, refugees, patients' relatives, and others. The theoretical background, specific empirical findings and the relevance of addressing spiritual needs is discussed by experts from different professions and cultural contexts. Supporting a person's spiritual needs remains an important task of future healthcare systems that wish to more comprehensively care for the healthcare needs of patients, and of religious communities to ensure that spiritual concerns of all persons, independent of their religious orientations, are met in and outside healthcare settings.

*Hidden Cities* - World Health Organization. Centre for Health Development 2010

"The joint WHO and UN-HABITAT report, Hidden cities: unmasking and overcoming health inequities in urban settings, is being released at a turning point in human history. For the first time ever, the majority of the world's population is living in cities, and this proportion continues to grow. Putting this into numbers, in 1990 fewer than 4 in 10 people lived in urban areas. In 2010, more than half live in cities, and by 2050 this proportion will grow to 7 out of every 10 people. The number of urban residents is growing by nearly 60 million every year. This demographic transition from rural to urban, or urbanization, has far-reaching consequences.

Urbanization has been associated with overall shifts in the economy, away

from agriculture-based activities and towards mass industry, technology and service. High urban densities have reduced transaction costs, made public spending on infrastructure and services more economically viable, and facilitated generation and diffusion of knowledge, all of which have fuelled economic growth"--Page ix.

*Diversity and Cultural Competence in Health Care* - Janice L. Dreachslin 2012-11-05

Major changes are occurring in the United States population and the nation's health care institutions and delivery systems. Significant disparities in health status exist across population groups. But the health care enterprise, with all its integrated and disparate parts, has been slow to respond. Written by three nationally known scholars and experts, *Diversity and Cultural Competence in Health Care: A Systems Approach* is designed to provide health care students and professionals with a clear understanding of foundations, philosophies, and processes that strengthen diversity management, inclusion, and culturally competent care delivery. Focusing on current practice and health care policy, including the recently passed Patient Protection and Affordable Care Act of 2010 (ACA), this textbook integrates strategic diversity management, self-reflective leadership, and the personal change process with culturally and linguistically appropriate care into a cohesive systems-oriented approach for health care professionals. The essentials of cultural competence and diversity management covered in this text will be helpful to a wide variety of students because they encompass principles and practices that can be realistically incorporated into the ongoing work of any health care field or organization. Each chapter contains learning objectives, summary, key terms, and review questions and activities designed to allow students to understand and explore concepts and practices identified throughout the text.

*Person Centered Medicine* - Juan E. Mezzich 2023-04-15

The 21st is being recognized as the Century of the Person, particularly in Medicine and Health. Person Centered Medicine, as a concept and global programmatic movement developed in collaboration with the World Medical Association, World Health Organization, International Council of

Nurses and 30 other institutions over a decade of annual Geneva Conferences, places the whole person as the center of health and as the goal and protagonist of health actions. Seeking the person at the center of medicine, has meant a medicine of the person, for the person, by the person and with the person. Articulating science and humanism, it strives for a medicine informed by evidence, experience and values and aimed at the restoration and promotion of health for all. The textbook on Person Centered Medicine reviews this perspective as it has evolved to date and its resulting knowledge base. The book structure encompasses an Introduction to the field and four sections on Principles, Methods, Specific Health Fields, and Empowerment Perspectives. Its 42 chapters are authored by 105 clinician-scholars from 25 different countries across world regions (North America, Latin America, Europe, Africa, the Middle East, Asia and Oceania). Its vision and goals involve total health for a total person. Ongoing work and upcoming publications would focus on redesigning health systems fit to purpose, and integrating ancestral knowledge and wisdom, community members' self- and mutual-care, advances in medical science, and the contributions of health-relevant social sectors.

**Disasters** - George Christodoulou 2016-05-11

The issue of the mental health consequences of disasters is always timely, but, at present, its consideration serves a pressing need if one takes into account the great number of co-existing and super-imposed disasters occurring throughout the world. Taking Greece as an example, on top of the economic disaster that has produced serious mental health problems, the country is faced with a serious refugee problem produced by human-made disasters that have occurred elsewhere and produce serious mental health problems to the refugees and the host population alike. This volume deals with the mental health consequences of Natural Disasters, Human-made Disasters, and a third category, Economic Disasters. This volume will help contribute to more efficient management and mitigation of the mental health effects of such disasters.

**Textbook of Psychiatry for Intellectual Disability and Autism Spectrum Disorder** - Marco O. Bertelli 2022-05-11

This textbook provides a state of the art of the knowledge on the prevalence, risk and etiological factors, clinical features, assessment procedures and tools, diagnostic criteria, treatment, and prognosis of the psychiatric disorders encountered in people with intellectual disability (ID) and low-functioning autism spectrum disorder (ASD). ID and ASD represent two meta-syndromic groups of several different conditions, each with particular cognitive and communication features. People with ID/ASD display an increased prevalence of a variety of psychiatric disorders, including psychotic disorders, mood disorders, anxiety and stress-related disorders, somatoform disorders, and obsessive-compulsive disorder, as well behavioral syndromes, personality disorders, and disorders due to psychoactive substance use. This book will enable readers to understand the specificities of psychiatric disorders in the context of ID/ASD. Above all, it will enable clinicians to overcome difficulties in diagnosis and to deliver more effective care that meets the particular needs of patients with ID/ASD.

*Supporting and Educating Traumatized Students* - Eric Rossen Ph.D.

2012-10-04

Traumatic or adverse experiences are pervasive among school-aged children and youth. Trauma undermines students' ability to learn, form relationships, and manage their feelings and behavior. School-based professionals working with traumatized students are often unaware of their complex needs or how to meet them within the hours of the typical school day. Combining knowledge of the cognitive and behavioral effects of trauma, evidence-based interventions, educational best practices, and the experiences of veteran educators, *Supporting and Educating Traumatized Students: A Guide for School-Based Professionals* presents a new framework for assisting students with a history of trauma. Designed specifically for busy educators who work with traumatized students daily, this volume brings together practitioners, researchers, and other experts with backgrounds in education, school psychology, school nursing, school social work, school counseling, school administration, clinical psychology, resilience, and trauma studies to examine the impacts of numerous traumatic experiences on school-aged children and youth. The book provides practical, effective, and implementable strategies and resources for adapting and differentiating instruction, modifying the classroom and school environments, and building competency for students affected by trauma. Chapters offer techniques and strategies designed for all types of educational environments and in the context of multiple potential sources of trauma. *Supporting and Educating Traumatized Students* is an essential resource for classroom teachers and for practicing school-based professionals. It is also useful for courses that address crisis, trauma, and education across a broad spectrum of specializations, including school social work, education, psychology, counseling, and school administration.

**Migration And Health In The European Union** - Rechel, Bernd 2011-12-01

"This book can be read by anyone with an interest in migration and health, whether as an advocate for migrants health, as a student in a health profession, researcher or policy maker. It provides an ample orientation to the field in the European context. Among other important raised issues, it underlines an all too often neglected fact; health is a

human right. By involving broad issues and problem areas from a variety of perspectives, the volume illustrates that migration and health is a field that can not be allocated to a single discipline." Carin Bjrngrn Cuadra, Senior Lecturer, Malm University, Sweden Migrants make up a growing share of European populations. However, all too often their situation is compounded by problems with accessing health and other basic services. There is a need for tailored health policies, but robust data on the health needs of migrants and how best these needs can be met are scarce.

Written by a collaboration of authors from three key international organisations (the European Observatory on Health Systems and Policies, the EUPHA Section on Migrant and Ethnic Minority Health, and the International Organization for Migration), as well as leading researchers from across Europe, the book thoroughly explores the different aspects of migration and health in the EU and how they can be addressed by health systems. Structured into five easy-to-follow sections, the volume includes: Contributions from experts from across Europe Key topics such as: access to human rights and health care; health issues faced by migrants; and the national and European policy response so far Conclusions drawn from the latest available evidence Comprehensive information on different aspects of health and migration and how they can best be addressed by health systems is still not easy to find. This book addresses this shortfall and will be of major value to researchers, students, policy-makers and practitioners concerned with migration and health in an increasingly diverse Europe.

*The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition* - American Psychiatric Association 2015-07-29

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization,

which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

*Psychiatric Diagnosis* - Ihsan M. Salloum 2009-03-23

Psychiatric diagnosis is one of the most important topics within the broad field of psychiatry. Clear, accurate definitions of the various disorders are essential for clinicians around the world to be confident that they are classifying patients in the same way, thereby enabling comparisons of treatment regimens and their outcomes. There are two major classification systems in use, one produced by the World Health Organization, the WHO International Classification of Diseases, Mental Disorders Chapter, and one by the American Psychiatric Association, the well known Diagnostic and Statistical Manual of Mental Disorders. Both of these are being revised so this book from the prestigious World Psychiatric Association is especially timely. In this book, leading experts in the field provide a broad and integrated coverage of the concepts, structure and context of psychiatric diagnosis. It begins by addressing mental health and illness around the world from historical, philosophical and cultural perspectives. Health is approached comprehensively, to include such aspects as resilience, resources and quality of life. The book

then covers major specific psychopathology topics in Section II, including new categorizations and dimensional approaches. Section III concentrates on the complex problem of comorbidity, a primary challenge for modern diagnostic classifications in psychiatry. Finally, Section IV reviews emerging international diagnostic systems in psychiatry, considering innovative models and adaptations. This book will be essential reading for anyone involved in the diagnosis of psychiatric disorders.

*Neoliberal Psychology* - Carl Ratner 2019-01-10

This provocative monograph defines the elusive concept of neoliberal psychology, focusing on its form, content, and cultural contexts and establishing it as a core feature of modern society. Its cross-cultural analysis examines the reality of neoliberal psychology in the globalized world, asserting that neoliberalism influences individuals' sense of self, identity, and—regardless of country of origin—concept of nationality. Macro cultural psychological theory opens out neoliberal psychology in its most visible aspects, such as work life, sexuality, consumer behavior, and the shared vision of the good life. At the same time, the author identifies profound social inequities and other negative aspects of neoliberal society

and discusses how they may be corrected. Included in the coverage: Snapshots of neoliberal society and psychology. A psychological theory for comprehending neoliberal psychology. Neoliberalism as a cultural, political, economic, ideological system. The neoliberal class structure of phenomena. Psychological and cultural emancipation, and macro cultural psychological theory. Since neoliberalism is the dominant social system in today's world, and because it commands both strong support and strong criticism from diverse interest groups, Neoliberal Psychology will be of general interest to a wide readership. The book's psychological focus is a new window into neoliberalism that is more accessible than more technical accounts of its economics and politics, and it should appeal especially to social science students and professors.

New Law and Ethics in Mental Health Advance Directives - Penelope Weller 2013

The recognition of positive rights and the growing impact of human rights principles has recently orchestrated a number of reforms in mental health law, bringing increasing entitlement to an array of health services. In this book, Penelope Weller considers the relationship between human rights and mental health law, and the changing attitudes which have led to the recognition of a right to demand treatment internationally. Weller discusses the ability of those with mental health problems to use advance directives to make a choice about what treatment they receive in the future, should they still be unable to decide for themselves. Focusing on new perspectives offered by the Conventions on the Rights of Persons with Disabilities (CRPD), Weller explores mental health law from a variety of international perspectives including: Canada, Australia, New Zealand and the United Kingdom, where policies differ depending on whether you are in England and Wales, or Scotland. These case studies indicate how human rights perspectives are shifting mental health law from a constricted focus upon treatment refusal, towards a recognition of positive rights. The book covers topics including: refusing treatment new approaches in human rights international perspectives in mental health law the right to demand treatment. The text will appeal to legal and mental health professionals as well as academics studying mental health law, and policy makers.

**Textbook of Violence Assessment and Management** - Robert I. Simon 2009-02-20

Evaluating and treating patients with violent ideations and behaviors can be frustrating, anxiety-provoking, and even dangerous, as errors in judgment can lead to disastrous consequences. Fortunately, there is the Textbook of Violence Assessment and Management, the first and only comprehensive textbook on assessing the potentially violent patient for mental health clinicians on the front lines of patient care. Uniquely

qualified to produce this comprehensive volume, the editors have assembled a distinguished roster of contributors who, in 28 practical chapters, combine evidence-based medicine with expert opinion to address the topic of patient violence in all its diversity of presentation and expression. Dr. Simon is Director of the Program in Psychiatry and Law at Georgetown University School of Medicine, as well as the author or co-author of more than two dozen books. Dr. Tardiff, Professor of Psychiatry and Public Health at the Payne Whitney Clinic, The New York Hospital -- Cornell Medical Center, is the author of *The Concise Guide to Assessment and Management of Violent Patients*, an introduction to aggression management now in its second edition. Violence is both endemic to our society and epidemic in our age. Skilled assessment and management of violence is therefore critical for mental health professionals involved in patient care. The *Textbook of Violence Assessment and Management* includes many features designed to instruct and support these clinicians. For example: It is the first comprehensive textbook to take the mental health professional from evaluation and assessment to treatment and management of patients who are or may become violent. The 28 chapters address the diversity of clinical settings, patient demographics, psychopathology and treatment modalities, making this work useful as both a textbook and a reference that clinicians can consult as needed for particular cases. End-of-chapter "Key Points" highlight the most important concepts and conclusions, allowing students to review and consolidate their learning and practicing professionals to locate critical information quickly. Clinical case examples abound, providing rich and nuanced perspectives on patient behavior, evaluation and management. The textbook includes a separate chapter on evaluating patients from different cultures, a competency that becomes more crucial as patient populations become more diverse. Increasing numbers of veterans are diagnosed with PTSD and traumatic brain injury. Campus tragedies such as Virginia Tech are fresh in our collective memory. This text is both timely and necessary -- not just for mental health professionals and their patients, but for the families and communities whose safety depends upon competent professional judgment.

*Recovery in Mental Health* - Michaela Amering 2009-02-17  
Winner of Medical Journalists' Association Specialist Readership Award  
2010 Recovery is widely endorsed as a guiding principle of mental health policy. Recovery brings new rules for services, e.g. user involvement and person-centred care, as well as new tools for clinical collaborations, e.g. shared decision making and psychiatric advance directives. These developments are complemented by new proposals regarding more ethically consistent anti-discrimination and involuntary treatment legislation, as well as participatory approaches to evidence-based medicine and policy. Recovery is more than a bottom up movement turned into top down mental health policy in English-speaking countries. Recovery integrates concepts that have evolved internationally over a long time. It brings together major stakeholders and different professional groups in mental health, who share the aspiration to overcome current conceptual reductionism and prognostic negativism in psychiatry. Recovery is the consequence of the achievements of the user movement. Most conceptual considerations and decisions have evolved from collaborations between people with and without a lived experience of mental health problems and the psychiatric service system. Many of the most influential publications have been written by users and ex-users of services and work-groups that have brought together individuals with and without personal experiences as psychiatric patients. In a fresh and comprehensive look, this book covers definitions, concepts and developments as well as consequences for scientific and clinical responsibilities. Information on relevant history, state of the art and transformational efforts in mental health care is complemented by exemplary stories of people who created through their lives and work an evidence base and direction for Recovery. This book was originally published in German. The translation has been fully revised, references have been amended to include the English-language literature and new material has been added to reflect recent developments. It features a Foreword by Helen Glover who relates how there is more to recovery than the absence or presence of symptoms and how health care professionals should embrace the growing evidence that people can reclaim their lives

and often thrive beyond the experience of a mental illness. Comments on German edition: "It is fully packed with useful information for practitioners, is written in jargon free language and has a good reading pace." Theodor Itten, St. Gallen, Switzerland and Hamburg, Germany "This book is amazingly positive. It not only talks about hope, it creates hope. Its therapeutic effects reach professional mental health workers, service users, and carers alike. Fleet-footed and easily understandable, at times it reads like a suspense novel." Andreas Knuf, pro mente sana, Switzerland "This is the future of psychiatry" cheered a usually service-oriented manager after reading the book. We might not live to see it.' **Coercive Care** - Bernadette Mcsherry 2013-06-26

There has been much debate about mental health law reform and mental capacity legislation in recent years with the UN Convention on the Rights

of Persons with Disabilities also having a major impact on thinking about the issue. This edited volume explores the concept of 'coercive care' in relation to individuals such as those with severe mental illnesses, those with intellectual and cognitive disabilities and those with substance use problems. With a focus on choice and capacity the book explores the impact of and challenges posed by the provision of care in an involuntary environment. The contributors to the book look at mental health, capacity and vulnerable adult's care as well as the law related to those areas. The book is split into four parts which cover: human rights and coercive care; legal capacity and coercive care; the legal coordination of coercive care and coercive care and individuals with cognitive impairments. The book covers new ground by exploring issues arising from the coercion of persons with various disabilities and vulnerabilities, helping to illustrate how the capacity to provide consent to treatment and care is impaired by reason of their condition.
