Floral Biology - David G. Lloyd 2012-12-06

Studies in floral biology are largely concerned with how flowers function to promote pollination and mating. The role of pollination in governing mating patterns in plant populations inextricably links the evolution of pollination and mating systems. Despite the close functional link between pollination and mating, research conducted for most of this century on these two fundamental aspects of plant reproduction has taken quite separate courses. This has resulted in surprisingly little cross-fertilization between the fields of pollination biology on the one hand and plant mating-system studies on the other. The separation of the two areas has largely resulted from the different backgrounds and approaches adopted by workers in these fields. Most pollination studies have been ecological in nature with a strong emphasis on field research and until recently few workers considered how the mechanics of pollen dispersal might influence

mating patterns and individual plant fitness. In contrast, work on plant mating patterns has often been conducted in an ecological vacuum largely devoid of information on the environmental and demographic context in which mating occurs. Mating-system research has been dominated by population genetic and theoretical perspectives with surprisingly little consideration given to the proximate ecological factors responsible for causing a particular pattern of mating to occur.

It's the summer before eighth grade and Flor is stuck at home and working at her family's mattress store, while her best friend goes off to band camp (probably to make new friends). It becomes even worse when she's asked to compete in the local honey pageant. This means Flor has to spend the summer practicing her talent (recorder) and volunteering (helping a recluse bee-keeper) with Candice, her former friend who's still bitter about losing the pageant crown to Flor when they were in second grade. And she can't say no. Then there's the possibility that Flor and her family are leaving to move in with her mom's family in New Jersey. And with how much her mom and dad have been fighting lately, is it possible that her dad may not join them? Flor can't let that happen. She has a lot of work to do.

When the well-known naturalist and environmentalist, John Muir finally settled in San Francisco, he immediately left for a week-long visit to Yosemite, a place he had only read about. Seeing it for the first time, Muir noted that "He was overwhelmed by the landscape, scrambling down steep cliff faces to get a closer look at the waterfalls, whooping and howling at the vistas, jumping tirelessly from flower to flower." He climbed a number of mountains, including Cathedral Peak and Mount Dana, and hiked the old Indian trail down Bloody Canyon to Mono Lake. He lived in the cabin for two years and wrote about this period in his book *First Summer in the Sierra*. Muir wrote few more books about his days in California and also a few about California's nature and wild life including *The Mountains of California*, *Our National Parks*, *The Yosemite* and *Picturesque California*.
