The Feast of the Goat - Mario Vargas Llosa 2012-10-18

Urania Cabral, a New York lawyer, returns to the Dominican Republic after a lifelong self-imposed exile. Once she is back in her homeland, the elusive feeling of terror that has overshadowed her whole life suddenly takes shape. Urania's own story alternates with the powerful climax of dictator Rafael Trujillo's reign. In 1961, Trujillo's decadent inner circle (which includes Urania's soon-to-be disgraced father) enjoys the luxuries of privilege while the rest of the nation lives in fear and deprivation. As Trujillo clings to power, a plot to push the Dominican Republic into the future is

being formed. But after the murder of its hated dictator, the Goat, is carried out, the Dominican Republic is plunged into the nightmare of a bloody and uncertain aftermath. Now, thirty years later, Urania reveals how her own family was fatally wounded by the forces of history. In *The Feast of the Goat* Mario Vargas Llosa eloquently explores the effects of power and violence on the lives of both the oppressors and those they victimized. 'The Feast of the Goat will stand out as the great emblematic novel of Latin America's twentieth century and removes *One Hundred Years of Solitude* of that title.' Times Literary Supplement **Comentarios Reales de Los Incas** - Garcilaso de la Vega 2009

Global Strategy for Infant and Young Child Feeding -

Organisation mondiale de la santé 2003

WHO and UNICEF jointly developed this global strategy to focus world attention on the impact that feeding practices have on the nutritional status, growth and development, health, and thus the very survival of infants and young children. The strategy is intended as a guide for action; it identifies interventions with a proven positive impact; it emphasizes providing mothers and families the support they need to carry out their crucial roles, and it explicitly defines the obligations and responsibilities in this regards of governments, international organizations, and other concerned parties.

Domesticated: Evolution in a Man-Made World - Richard C. Francis 2015-05-25

"An essential read for anyone interested in the stories of the animals in our home or on our plate."—BBC Focus
Without our domesticated plants and animals, human civilization as we know it would not exist. We would still be living at subsistence level as hunter-gatherers if not for domestication. It is no accident that the cradle of civilization—the Middle East—is where sheep, goats, pigs, cattle, and cats commenced their fatefully intimate association with humans. Before the agricultural revolution, there were perhaps 10 million humans on earth. Now there are more than 7 billion of us. Our domesticated species have also thrived, in stark contrast to their wild ancestors. In a human-constructed environment—or man-made world—it pays to be domesticated. Domestication is an evolutionary process first and foremost. What most distinguishes domesticated animals from their wild ancestors are genetic alterations resulting in tameness, the capacity to

tolerate close human proximity. But selection for tameness often results in a host of seemingly unrelated by-products, including floppy ears, skeletal alterations, reduced aggression, increased sociality, and reduced brain size. It's a package deal known as the domestication syndrome. Elements of the domestication syndrome can be found in every domesticated species—not only cats, dogs, pigs, sheep, cattle, and horses but also more recent human creations, such as domesticated camels, reindeer, and laboratory rats. That domestication results in this suite of changes in such a wide variety of mammals is a fascinating evolutionary story, one that sheds much light on the evolutionary process in general. We humans, too, show signs of the domestication syndrome, which some believe was key to our evolutionary success. By this view, human evolution parallels the evolution of dogs from wolves, in particular. A natural storyteller, Richard C. Francis weaves history, archaeology, and anthropology to create a fascinating narrative while seamlessly integrating the most cutting-edge ideas in twenty-first-century biology, from genomics to evo-devo.

Chartwell Manor - Glenn Head 2021-05-25

No one asks for the childhood they get, and no child ever deserved to go to Chartwell Manor. For Glenn Head, his two years spent at the now-defunct Mendham, NJ, boarding school – run by a serial sexual and emotional abuser of young boys in the early 1970s – left emotional scars in ways that he continues to process. This graphic memoir – a book almost 50 years in the making – tells the story of that experience, and then delves with even greater detail into the reverberations of that experience in adulthood, including addiction and other self-destructive behavior. Head tells his story with unsparing honesty, depicting himself as a deeply flawed human struggling to make sense of the childhood he was given.

Indigenous Philosophies and Critical Education - George Jerry Sefa Dei 2011

An important academic goal is to understand ongoing contestations in knowledge in the search to engage everyday social practice and experiences, as well as the social barriers and approaches to peaceful human coexistence. This reader pulls together ideas concerning Indigenous epistemologies (e.g., worldviews, paradigms, standpoints, and philosophies) as they manifest themselves in the mental lives of persons both from and outside the orbit of the usual Euro-American culture. The book engages Indigenous knowledges as far more than a «contest of the marginals», thereby challenging the way oppositional knowledges are positioned, particularly in the Western academy. Subsequently, this book is a call to recognize and acknowledge Indigenous knowledges as legitimate knowings in their own right, and not necessarily in competition with other sources or forms of knowledge. The project offers an opportunity for the critical thinker to continue on a de-colonial/anti-colonial intellectual journey in ways informed by Indigenous theorizing.

Emma - Jane Austen 2020-12

"Silly things do cease to be silly if they are done by sensible people in an impudent way." Join us on a wonderful journey through Jane Austen's another classic story, Emma. Jane Austen (1775-1817) ? The daughter of a village preacher, the seventh child of eight, and one of two daughters, Austen grew up with little formal instruction, and wrote six novels by the age of 40: her first published novel Sense and Sensibility (1811), the popular Pride and Prejudice (1813), the psychologically

complex Mansfield Park (1814), the clever Emma (1816), the melancholy Persuasion (1818), and humorous Northanger Abbey (1818), the latter two being posthumously published. Though not an acclaimed author during her lifetime, her then anonymously published novels are counted among the most popular works of classic literature in the English speaking world today, two centuries later. Zoonoses and Communicable Diseases Common to Man and Animals: Bacterioses and mycoses - Pedro N. Acha 2001

In recent years, zoonoses and communicablediseases common to man and animals have gained increasing attention worldwide. Human diseases that have their origins in infected animals--such as AIDS, SARS,

and Creutzfeldt-Jakob--have highlighted the need for a better understanding of animal diseases. The ease and speed of modern travel facilitates the spread of diseases once confined to specific geographic areas, as recently occurred with the Covid-19 epidemic. Animal migration and trade pose a similar threat, as was shown by the outbreaks in the United States of West Nile fever and monkeypox--two diseases not previously known in the Western Hemisphere. Each of these examples highlights the need for accurate, up-to-date information, such as that presented here in the latest edition of *Zoonoses and Communicable Diseases Common to Man and Animals*. This edition, published for the first time in three volumes, covers: I. Bacterioses and mycoses II. Chlamydioses, rickettsioses, and viroses III. Parasitoses The books provide a detailed overview of the most important historic and emerging zoonotic diseases, such as Ebola hemorrhagic fever, foot-and-mouth disease, influenza, giardiasis, Japanese encephalitis, shigellosis, and spongiform encephalopathies, with information ranging from their first appearance and most important outbreaks to the latest scientific knowledge of the diseases and their causative agents. The chapters provide the following key information on each disease: etiology geographic distribution symptoms and occurrence in man and animals source of infection and mode of transmission role of animals in its epidemiology diagnostic techniques, and prevention and control measures Numerous tables and figures diagramming modes of transmission complement the text. The book is an essential tool for biologists, parasitologists, virologists, veterinarians, doctors, epidemiologists, and workers in public health and animal health institutions, as well as for teachers, researchers, and students in these fields. All of them will find valuable material to enrich their collection of reference works in the third edition of *Zoonoses and Communicable Diseases Common to Man and Animals*. Volumes 2 (Chlamydioses, rickettsioses, and viroses) and 3 (Parasitoses) are also available.

He spends most of his time goggled in to the Metaverse, where his avatar is legendary. But in the club known as The Black Sun, his fellow hackers are being felled by a weird new drug called Snow Crash that reduces them to nothing more than a jittering cloud of bad digital karma (and IRL, a vegetative state). Investigating the Infocalypse leads Hiro all the way back to the beginning of language itself, with roots in an ancient Sumerian priesthood. Breastfeeding - Patricia Stuart-Macadam 2017-09-29 Breastfeeding is a biocultural phenomenon: not only is it a biological process, but it is also a culturally determined behavior. As such, it has important implications for understanding the past, present, and future condition of our species. In general, scholars have emphasized either the biological or the cultural aspects of breastfeeding, but not both. As biological anthropologists the editors of this volume feel that an

evolutionary approach combining both aspects is essential. One of the goals of their book is to incorporate data from diverse fields to present a more holistic view of breastfeeding, through the inclusion of research from a number of different disciplines, including biological and social/cultural anthropology, nutrition, and medicine. The resulting book, presenting the complexity of the issues surrounding very basic decisions about infant nutrition, will fill a void in the existing literature on breastfeeding.

The Emergence of Phonology - Marilyn M. Vihman
2013-11-07

How well have classic ideas on whole-word phonology stood the test of time? Waterson claimed that each child has a system of their own; Ferguson and Farwell emphasised the relative accuracy of first words; Menn noted the occurrence of regression and the emergence of phonological systematicity. This volume brings together classic texts such as these with current data-rich studies of British and American English, Arabic, Brazilian Portuguese, Finnish, French, Japanese, Polish and Spanish. This combination of classic and contemporary work from the last 30 years presents the reader with cutting-edge perspectives on child language by linking historical approaches with current ideas such as exemplar theory and usage-based phonology and contrasting state-of-the-art perspectives from developmental psychology and linguistics. This is a valuable resource for cognitive scientists, developmentalists, linguists, psychologists, speech scientists and therapists interested in understanding how children begin to use language without the benefit of language-specific innate knowledge.
