Business Analytics - Walter R. Paczkowski 2022-01-03

This book focuses on three core knowledge requirements for effective and thorough data analysis for solving business problems. These are a foundational understanding of: 1. statistical, econometric, and machine learning techniques; 2. data handling capabilities; 3. at least one programming language. Practical in orientation, the volume offers illustrative case studies throughout and examples using Python in the

context of Jupyter notebooks. Covered topics include demand measurement and forecasting, predictive modeling, pricing analytics, customer satisfaction assessment, market and advertising research, and new product development and research. This volume will be useful to business data analysts, data scientists, and market research professionals, as well as aspiring practitioners in business data analytics. It can also be used in colleges and universities offering courses and certifications in business data analytics, data science, and market research.

Productivity and Efficiency Analysis - Christopher J. O'Donnell 2018-12-12

This book provides a coherent description of the main concepts and statistical methods used to analyse economic performance. The focus is on measures of performance that are of practical relevance to policy makers. Most, if not all, of these measures can be viewed as measures of productivity and/or efficiency. Linking fields as diverse as index number theory, data envelopment analysis and stochastic frontier analysis, the book explains how to compute measures of input and output quantity change that are consistent with measurement theory. It then discusses ways in which meaningful measures of productivity change can be decomposed into measures of technical progress, environmental change, and different types of efficiency change. The book is aimed at graduate students, researchers, statisticians, accountants and economists working

in universities, regulatory authorities, government departments and private firms. The book contains many numerical examples. Computer codes and datasets are available on a companion website.

Advances in Time Series Data Methods in Applied Economic Research - Nicholas Tsounis 2018-12-12

This conference proceedings volume presents advanced methods in time series estimation models that are applicable various areas of applied economic research such as international economics, macroeconomics, microeconomics, finance economics and agricultural economics. Featuring contributions presented at the 2018 International Conference on Applied Economics (ICOAE) held in Warsaw, Poland, this book presents contemporary research using applied econometric method for analysis as well as country specific studies with potential implications on economic policy. Applied economics is a rapidly growing field of economics that combines economic theory with econometrics to analyse economic problems of the real world usually with economic policy interest. ICOAE is an annual conference started in 2008 with the aim to bring together economists from different fields of applied economic research in order to share methods and ideas. Approximately 150 papers are submitted each year from about 40 countries around the world. The goal of the conference and the enclosed papers is to allow for an exchange of experiences with different applied econometric methods and to promote joint initiatives among well-established economic fields such as finance, agricultural economics, health economics, education economics, international trade theory and management and marketing strategies. Featuring global contributions, this book will be of interest to researchers, academics, professionals and policy makers in the field of applied economics and econometrics.

A Guide to Econometrics - Peter Kennedy 2008-02-19

This is the perfect (and essential) supplement for all econometrics classes--from a rigorous first undergraduate course, to a first master's, to a PhD course. Explains what is going on in textbooks full of proofs and formulas Offers intuition, skepticism, insights, humor, and practical advice (dos and don'ts) Contains new chapters that cover instrumental

variables and computational considerations Includes additional information on GMM, nonparametrics, and an introduction to wavelets
Environmental Policy and Renewable Energy Equipment Exports - Henning Diederich 2016-05-23

This thesis investigates the connection between environmental regulation, technological innovation, and export competitiveness in renewable energy equipment based on a large sample of 225 developed and developing countries from 1990 to 2012. The empirical analysis yields strong supporting evidence for the narrowly strong Porter Hypothesis as well as for the lead market theory. The results suggest that environmental regulation drives innovation and export volumes in solar- and wind-power-related goods. This is particularly the case for well-crafted (i.e. market-based, output-oriented, and clear) instruments such as carbon trading regimes. Moreover, the data show that early adopters of renewable energy support policies benefit most.

The Economics and Econometrics of the Energy-Growth Nexus - Angeliki Menegaki 2018-03-29

The Economics and Econometrics of the Energy-Growth Nexus recognizes that research in the energy-growth nexus field is heterogeneous and controversial. To make studies in the field as comparable as possible, chapters cover aggregate energy and disaggregate energy consumption and single country and multiple country analysis. As a foundational resource that helps researchers answer fundamental questions about their energy-growth projects, it combines theory and practice to classify and summarize the literature and explain the econometrics of the energy-growth nexus. The book provides order and guidance, enabling researchers to feel confident that they are adhering to widely accepted assumptions and procedures. Provides guidance about selecting and implementing econometric tools and interpreting empirical findings Equips researchers to get clearer

pictures of the most robust relationships between variables Covers up-to-date empirical and econometric methods Combines theory and practice to classify and summarize the literature and explain the econometrics of the energy-growth nexus

Modern Survey Analysis - Walter R. Paczkowski 2022-09-11

This book develops survey data analysis tools in Python, to create and analyze cross-tab tables and data visuals, weight data, perform hypothesis tests, and handle special survey questions such as Check-all-that-Apply. In addition, the basics of Bayesian data analysis and its Python implementation are presented. Since surveys are widely used as the primary method to collect data, and ultimately information, on attitudes, interests, and opinions of customers and constituents, these tools are vital for private or public sector policy decisions. As a compact volume, this book uses case studies to illustrate methods of analysis essential for those who work with survey data in either sector. It focuses on two overarching objectives: Demonstrate how to extract actionable, insightful, and useful information from survey data; and Introduce Python and Pandas for analyzing survey data.

Deep Data Analytics for New Product Development - Walter R. Paczkowski 2020-02-19

This book presents and develops the deep data analytics for providing the information needed for successful new product development. Deep Data Analytics for New Product Development has a simple theme: information about what customers need and want must be extracted from data to effectively guide new product decisions regarding concept development, design, pricing, and marketing. The benefits of reading this book are twofold. The first is an understanding of the stages of a new product development process from ideation through launching and tracking, each supported by information about customers. The second benefit is an understanding of the deep data analytics for extracting that information from data. These analytics, drawn from the statistics, econometrics, market research, and machine learning spaces, are developed in detail and illustrated at each stage of the process with simulated data. The stages of new product development and the

supporting deep data analytics at each stage are not presented in isolation of each other, but are presented as a synergistic whole. This book is recommended reading for analysts involved in new product development. Readers with an analytical bent or who want to develop analytical expertise would also greatly benefit from reading this book, as well as students in business programs.

EBOOK: Macroeconomics - Rudiger Dornbusch 2014-02-16

Dornbusch, Fischer, and Startz has been a long-standing, leading intermediate macroeconomic theory text since its introduction in 1978. This revision retains most of the text's traditional features, including a middle-of-the-road approach and very current research, while updating and simplifying the exposition. A balanced approach explains both the

potential and limitations of economic policy. Macroeconomics employs a model-based approach to macroeconomic analysis and demonstrates how various models are connected with the goal of giving students the capacity to analyze current economic issues in the context of an economic frame of reference. The only pre-requisite continues to be principles of economics.

EBOOK: Public Finance, Global Edition - Ted Gayer 2014-01-16

Rosen and Gayer's Public Finance provides the economic tools necessary to analyze government expenditure and tax policies and, along the way, takes students to the frontiers of current research and policy. While the information presented is cutting edge and reflects the work of economists currently active in the field, the approach makes the text accessible to undergraduates whose only prior exposure to economics is at the introductory level. The authors' years of policy experience have convinced them that modern public finance provides a practical and invaluable framework for thinking about policy issues. The goal is simple: to emphasize the links between sound economics and the analysis of real-world policy problems. Enhancements and key features for this new Global Edition include: New Policy Perspectives introduce relevant and engaging examples of international policy so students can extend their understanding of theory to policymaking across the globe. New Empirical Evidence applications provide students with real-world examples that are relevant to them, from case studies about Sweden and China to global examples that compare experiences between countries. Updated end-of-chapter questions broaden critical thinking, encouraging students to apply their knowledge to international and comparative examples. The results of econometric models are used to help students understand how expenditure and tax policies affect individual behavior and how governments set policies. Integrated theory and analysis: Institutional, theoretical, and empirical material is interwoven to provide students with a clear and coherent view of how government spending and taxation relate to economic theory. Current research is presented alongside discussion of methodological and substantive controversies. The approach is modern, theoretical, and empirical, and shared by most

active economists. Institutional and legal settings are described in detail, and the links between economic analysis and current political issues are emphasized. This Global Edition has been adapted to meet the needs of courses outside of the United States and does not align with the instructor and student resources available with the US edition.

Advances in Quantitative Economic Research - Nicholas Tsounis
2022-08-30

This volume presents advanced quantitative methods and applications in economics with special interest in macroeconomics, microeconomics, financial economics, international economics, agricultural economics, and marketing and management. Featuring selected contributions from the 2021 International Conference of Applied Economics (ICOAE 2021) held in Heraklion Crete, Greece, this book provides country specific studies with potential applications in economic policy.

Predictive and Simulation Analytics - Walter R. Paczkowski 2023-07-18

This book connects predictive analytics and simulation analytics, with the end goal of providing Rich Information to stakeholders in complex systems to direct data-driven decisions. Readers will explore methods for extracting information from data, work with simple and complex systems, and meld multiple forms of analytics for a more nuanced understanding of data science. The methods can be readily applied to business problems such as demand measurement and forecasting, predictive modeling, pricing analytics including elasticity estimation, customer satisfaction assessment, market research, new product development, and more. The book includes Python examples in Jupyter notebooks, available at the book's affiliated Github. This volume is intended for current and aspiring

business data analysts, data scientists, and market research professionals, in both the private and public sectors.

Foreign Direct Investment in Latin America - Werner Baer 2013-04-15

Examine the changing nature of foreign investments in Latin America! Generously enhanced with easy-to-understand charts, tables, and graphs, this book covers the ins and outs of foreign direct investment in the established and emerging markets of Latin America. In addition to an overview of direct investment for the entire Latin American region in the 1990s, this valuable book examines specific countries' experiences with FDI in that decade. These include Argentina, Chile, Mexico, Brazil, Peru, Ecuador, Paraguay, Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua. Spending on environmental projects is on the rise, and Latin American nations are at the forefront of this financial whirlwind in the developing world. *Foreign Direct Investment in Latin America: Its Changing Nature at the Turn of the Century* examines the difficulties of assessing environmental investments. It analyzes the role of international capital in Latin-American environmental issues and discusses the major players, such as the World Bank, in international capital and the environment. *Foreign Direct Investment in Latin America* presents case

studies that illustrate: the history of FDI in Argentina and the impact of the privatization of state-owned enterprises in 1991-1993 the similarities and differences between 1990s FDI in Mexico and Chile the ways that modern investment in Brazil differs in purpose from investment there in previous economic eras how Peru addressed its balance-of-payments crisis in a time when its domestic financial markets were thin and there existed few sources of financing besides banks how Paraguay's historical lack of infrastructure has hampered FDI efforts there Ecuador's financial and balance-of-payments crisis-its currency is in free-fall and its financial institutions are on the brink of collapse . . . and much more! *Foreign Direct Investment in Latin America* packs all this valuable information into a single user-friendly source. As we move into the new millennium, no student, educator, or investor interested in this quickly evolving, volatile market should be without it!

Health Economics - Barbara McPake 2020-05-04

Health Economics: An International Perspective is the only textbook to provide a truly international, comparative treatment of health economics. Offering an analysis of health systems across borders, the fourth edition of this key text has been updated and revised to take account of changes in a host of countries. This edition features an expanded introduction, providing better grounding for many of the examples that come in subsequent chapters and making it easier for non-health care experts to see the links between the theory, the examples and the health care system components. It also boasts a restructured format, dividing the book into two broad sections: the first focuses on ideas and principles, along with evidence on their applications in the health sector, whereas the second focuses on introducing core tools and techniques used in applied health economics research. Further updates to this edition include: two new chapters on applied econometrics; a new chapter on equity, focusing on equity in access to health care, paying particular attention to how access and need for health care are defined and measured in applied research; a new chapter on emerging issues for health systems that are emanating from a series of global transitions both within (e.g. demographic change, epidemiological change, the

global resolution on universal health coverage) and without the health sector (e.g. economic transitions). Throughout the text, examples and illustrations are taken from a wide range of settings and world regions, providing a unique overview of the performance of different health systems.

Environmental Finance and Green Banking - Samsul Alam 2023-05-31
Environmental finance and green banking are central drivers of the transition to a sustainable economy and essential components in solutions to climate change. This book presents the latest research on theory and practices in these interdisciplinary fields, incorporating both public and corporate finance. It introduces three parts - environmental investing and financing, green banking and environmental policies in the public sector. The book explores the current trends, dynamics and ways forward for environmental finance and green banking, including fundamental theories (e.g., environmental Kuznets curve) and comparisons between traditional and green bond efficiency, corporate governance practices and disclosure, green central banking, climate finance, sustainable strategies, green Islamic banking, and public climate fund management in multi-country contexts. The contributors to this book highlight significant challenges ahead while recognizing potential opportunities, such as the revolution in green investments and trading in green bonds. This book is a welcome addition to the literature on environmental economics and finance and the economics of sustainability and climate change.

Pricing Analytics - Walter R. Paczkowski 2018-06-27

The theme of this book is simple. The price - the number someone puts on a product to help consumers decide to buy that product - comes from data. Specifically, it comes from statistically modeling the data. This book gives the reader the statistical modeling tools needed to get the number to put on a product. But statistical modeling is not done in a vacuum. Economic and statistical principles and theory conjointly provide the background and framework for the models. Therefore, this book emphasizes two interlocking components of modeling: economic theory and statistical principles. The economic theory component is sufficient to

provide understanding of the basic principles for pricing, especially about elasticities, which measure the effects of pricing on key business metrics. Elasticity estimation is the goal of statistical modeling, so attention is paid to the concept and implications of elasticities. The statistical modeling component is advanced and detailed covering choice (conjoint, discrete choice, MaxDiff) and sales data modeling.

Experimental design principles, model estimation approaches, and analysis methods are discussed and developed for choice models. Regression fundamentals have been developed for sales model specification and estimation and expanded for latent class analysis.

Principles of Econometrics - R. Carter Hill 2018-02-23

Designed to arm finance professionals with an understanding of why econometrics is necessary, this book also provides them with a working knowledge of basic econometric tools. The fourth edition has been thoroughly updated to reflect the current state of economic and financial markets.

Health Economics - Barbara McPake 2008

This popular textbook provides a comprehensive but accessible coverage of health economic principles and applications. It provides an introduction for those with no previous knowledge of economics, but also more advanced material suitable for those with a background in economics. Now into its second edition, Barbara McPake and Charles Normand have incorporated developments in economic evaluation and economics of health systems from recent research and experience while retaining an accessible approach and style. The book starts with a section on basic economic principles as applied to health and health care, and goes on to discuss economic evaluation in health care, the economics of health systems and health care finance. Examples and illustrations are taken from a wide range of settings and world regions, reflecting the authors' belief that the same principles apply, and that it is useful to have some understanding of how different countries organise the health system. It provides an understanding of the performance of different health systems from the insurance based approaches in the United States to government funding that is common in Canada and most

countries in Europe, and the mixed systems that operate in most low-income countries. This book is ideal for students in public health and related courses, for health care professionals and those studying health economics at a more advanced level.

Non-Tariff Barriers to Agricultural Trade between Turkey and the EU -
Claus Mayer 2014-04-01

This thesis reviews the border effect approach as an application of gravity models of trade and different methods of including multilateral resistance terms (MRTs) in it. Some focus is laid on the endogeneity problem of the approach. In an empirical application of the approach, agricultural trade between Turkey and the EU is analysed; the effect of data pooling and aggregation is studied; the conversion of estimated border effects into ad-valorem tariff equivalents (AVEs) reveals the crucial importance of a reliable measure of the elasticity of substitution when trying to separate the effects of NTBs of the total effect of a border.

Entrepreneurship in the Raw Materials Sector - Zoltán Bartha
2022-03-18

The Entrepreneurship in the Raw Materials Sector proceeding is a collection of papers focusing on the macroeconomic aspects of green growth, the business opportunities in the raw materials sector, and the challenges in entrepreneurship, entrepreneurship training. These papers were presented during the closing conference of LIMBRA ('Decreasing the negative outcomes of brain drain in the raw materials sector'), a project funded by EIT Raw Materials in the period of 2019-2021. LIMBRA primarily aims at generating new entrepreneurial ideas in the raw materials sector, and to encourage engineering students graduating in raw materials-related programmes to start their own businesses. This proceeding offers a good summary of our approach, and our results: identify the critical trends in the macroeconomic environment; learn about the specifics of the raw materials markets; develop new business

ideas, and rely on your local ecosystem for extra knowledge, mentoring; and finally, help students to "Become stay-at-home entrepreneurs".
Economic Transformation for Poverty Reduction in Africa - Almas Heshmati 2019-04-05

This book is an edited volume which contains empirical studies on determinants of poverty and its reduction in Africa. It looks at multidimensional measures of poverty, production and productivity-related factors, policies influencing poverty and random, hazardous but preventive factors influencing poverty levels and their reduction. The book argues that we need to account for different dimensions of poverty, when it is measured and classified, and for identifying the determinants of poverty and factors reducing poverty. The studies in the volume provide readers with a comprehensive picture of the state of poverty, its measurement, causal factors and efficient policies and practices in poverty reduction on the African continent as a whole and also in selected countries.

Empirical Analyses on Rice Yield Determinants of Smart Farming in Japan - Dongpo Li 2021-02-13

This book consists of the major findings of the series projects on smart rice farming in Japan, headed by President of the Society of Agricultural Informatics. It is the gateway to know the paddy agriculture, by incorporating the findings of series national projects. The scenario includes soil analysis, growth investigation, environmental observation of air temperature, water temperature, water depth, cultivation and management records, yield, and quality analysis. In addition to the analysis of this large database, it showcases the new generation large-

scale rice farming technology system, integrated with agri-machineries, field sensors, visualized farming, and skill-transferring system. This book presents an analytical framework of big data in agriculture and shows the empirical results for rice farm innovation. The authors want to have the pleasure to contribute the agricultural innovations of adopting smart technologies and empirical studies, in countries no matter far or near to Japan. The authors also hope this book conveys the innovative and elaborate sprites of smart agriculture to the next generation and is of interest to students with curiosity on agriculture, smart technology, and empirical study.
