**Self-assessment of Current Knowledge

1974

**Pediatric Anesthesia: A Problem-Based
Learning Approach** - Kirk Lalwani
2018-10-15

Linking existing knowledge to new
knowledge by presenting it in the
form of a case or a problem is a
popular and effective educational
approach resulting in better
retention of the knowledge and
improved ability to apply that
knowledge to solve real problems.
This problem-based learning (PBL)
method was introduced into medical
education at McMaster University in
Ontario, Canada, in 1969. Since then
it has been widely incorporated into
secondary, undergraduate, and
graduate education in a variety of
disciplines worldwide. This new

volume for the Anesthesiology Problem-Based Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Cases were carefully selected to present a broad systems-based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The "Stem Case and Key Questions" and "Discussion" sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in-depth clinical review of the subspecialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question

bank to prepare for examinations.
