The volumes are designed with the student in mind, and include features to aid self-directed learning, clinical reasoning and problem-solving. 100 Cases in Paediatrics covers the following subject areas: Respiratory, Cardiology, Endocrinology and diabetes, Gastroenterology, Nephrology, Infections, Dermatology, Haematology, Oncology, Bones and joints, Neurology, Child and Adolescent Psychiatry, Neonatology, Miscellaneous

**Paediatric Forensic Medicine and Pathology, Second Edition** -

Anthony Busuttill 2008-11-28

Child abuse and suspicious child deaths are very complicated matters for clinicians, pathologists, law enforcement officials and legal professionals to investigate. Meanwhile, the evidence base for forensic pathology, especially in paediatrics, is steadily growing. In Paediatric Forensic Medicine and Pathology, two internationally acclaimed editors have brought together a first class author team who provide an up-to-date, comprehensive, and thorough review of the contemporary problems encountered in practice today. Individual chapters explore the emerging role of imaging in the diagnosis of non-accidental injury and compare recent evidence contrasting sudden infant death and SIDS; the head and

neck injury chapter carefully explores the 'shaken baby syndrome' and similar patterns of injury that have recently gained widespread media attention. Special emphasis is given to interview and assessment procedures, and useful clinical forms are included throughout the book. Whether in a clinical, laboratory, or legal setting, readers dealing with forensic inquiries or who are in preparation for court will find the comprehensive background and evidence base necessary to support their investigations. Paediatric Forensic Medicine and Pathology is an invaluable resource for forensic pathologists, paediatric pathologists, and paediatricians, as well as all practitioners in the judicial and legal, criminal investigation and social services systems that have to deal with such cases.

**Annals of the Academy of Medicine, Singapore** - Academy of Medicine (Singapore) 2005

**Pediatric Anesthesia: A Problem-Based Learning Approach** - Kirk Lalwani 2018-09-17

Linking existing knowledge to new knowledge by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem-based learning (PBL) method was introduced into medical education at McMaster University in Ontario, Canada, in 1969. Since then it has been widely incorporated into secondary, undergraduate, and graduate education in a variety of disciplines worldwide. This new volume for the Anesthesiology Problem-Based Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Cases were carefully selected to present a broad systems-based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The 'Stem Case and Key Questions' and 'Discussion' sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in-depth clinical review of the subspecialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations.

From an Association to a Royal College - Alan Craft 2017-03-21

This book describes the history of the Royal College of Paediatrics and Child Health (RCPCCH) covering the period from 1988 to 2014, which includes the transition from the British Paediatric Association (BPA) to the formation of the now established RCPCCH. The book contains a collection of viewpoints from paediatricians who held officer posts with the association and College through this time. The authors offer insights and reflections to help the reader understand where the College is at the moment on a variety of core paediatric issues, and significantly where it has come from. The formation of the RCPCCH from the BPA was very controversial, with some members resigning from the RCP. Since then, the College has come a long way and is now recognised as the definitive body to speak for children's health in the UK and has forged relationships with many overseas countries. It has produced influential documents, and lobbied for advances in the practice of paediatrics. It has reported on standards for how children should be cared for in emergency and urgent care settings, launched policy to improve how children are looked after in the secure estate, and produced teaching and training materials for child protection among many other contributions to child health. Finally, it will be of interest to other Colleges and professional bodies as well as to Members and Fellows of the College.

**Get Through MRCPCCH Part 2: Data Interpretation Questions, second edition** - Nagi Barakat 2008-06-13

Get Through MRCPCCH Part 2: Data Interpretation Questions is based on the original title, 100 Data Interpretation Questions in Paediatrics for MRCPCCH/MRCP, and provides valuable revision material for candidates sitting the two written papers for Part 2 of the Membership of the Royal College of Paediatrics and Child Health (MRCPCCH) exam. This new edition has been revised and expanded and now includes four different question types: best of list; n from many; extended matching questions; and questions to which a written answer must be given. This gives the reader practice in real-life exam style questions as well as more open-ended questions that don't appear in the exam but really test the reader's knowledge while they are revising. It will prepare candidates for questions dealing with data interpretation, including ECGs, EEGs, growth charts, lists of test results and other materials commonly encountered in the examination. The answers are supplemented by invaluable extra information to help the reader understand why an answer is right or wrong, and to aid further revision on the topics covered. All cases have been selected according to the criteria of the MRCPCCH exam, comprehensively covering all paediatric topics and coming from years of genuine clinical paediatric experience. This is an essential text for all candidates sitting the MRCPCCH exam, as well as examiners and trainers for those exams, senior house officers, specialist registrars and their overseas equivalents.
