*The Thinking Mind* - Niall Galbraith 2016-10-14

The field of thinking has undergone a revolution in recent years, opening itself up to new

perspectives and applications. The traditional focus on laboratory-based thinking has transformed as theoretical work is now being applied to new contexts and real-world issues. This volume presents a state-of-the-art survey of human thinking in everyday life, based around, and in tribute to, one of the field's most eminent figures: Ken Manktelow. In this collection of cutting-edge research, Manktelow's collaborators and colleagues review a wide range of important and developing areas of inquiry. This book explores modern perspectives on a variety of traditional and contemporary topics, including

Wason's reasoning tasks, logic, meta-reasoning, and the effect of environment and context on reasoning. The Thinking Mind offers a unique combination of breadth, depth, theoretical exploration and real-world applications, making it an indispensable resource for researchers and students of human thinking.

**Vignelli Transit Maps** - Peter B. Lloyd 2012

A vivid reconstruction of designer Massimo Vignelli's attempt to present the complexities of the New York subway in a clear and modern form.

**Cosmic Imagery** - John D. Barrow 2011-12-31

\* Certain key images embody our understanding of life and the universe we inhabit. Some, like Robert Hooke's first microscopic views of the natural world, or the stunning images taken by the Hubble Space Telescope, were made possible by our new technical capabilities. \* Others, like the first graph, were breathtakingly simple but perennially useful. Vesalius's haunting pictures of the human anatomy were nothing less than works of art, while the simple diagram now known as Pythagoras' Theorem - proved by the ancient Babylonians, Chinese, Indians and Egyptians long before the Greeks themselves -

lay the foundations for modern mathematics. \* Many of these images have shattered our preconceptions about the limits and nature of existence: the first breathtaking pictures of the Earth from space stimulated an environmental consciousness that has grown ever since; the mushroom cloud from atomic and nuclear explosions became the ultimate symbol of death and destruction; the flying saucer came to represent the possibility of extraterrestrial life; while Mercator's flat map of the Earth coordinated an entire world-view. \* Cosmic Imagery takes us on a tour through the most influential images in

science. Each holds an important place in the growth of human understanding and carries with it a story that illuminates its origin and meaning. Together they reveal something of the beauty and truth of the universe, and why, so often, a picture is better than a thousand words.

*Designing the Modern City* - Eric Mumford

2018-04-10

A comprehensive new survey tracing the global history of urbanism and urban design from the industrial revolution to the present. Written with an international perspective that encourages cross-cultural comparisons, leading architectural and urban historian Eric Mumford presents a comprehensive survey of urbanism and urban design since the industrial revolution. Beginning in the second half of the 19th century, technical, social, and economic developments set cities and the world's population on a course of massive expansion. Mumford recounts how key figures in design responded to these changing

circumstances with both practicable proposals and theoretical frameworks, ultimately creating what are now mainstream ideas about how urban environments should be designed, as well as creating the field called “urbanism.” He then traces the complex outcomes of approaches that emerged in European, American, and Asian cities. This erudite and insightful book addresses the modernization of the traditional city, including mass transit and sanitary sewer systems, building legislation, and model tenement and regional planning approaches. It also examines the urban design concepts of groups such as CIAM

(International Congresses of Modern Architecture) and Team 10, and their adherents and critics, including those of the Congress for the New Urbanism, as well as efforts toward ecological urbanism. Highlighting built as well as unbuilt projects, Mumford offers a sweeping guide to the history of designers’ efforts to shape cities.

2014-08-05

The spellbinding and revealing chronicle of Nazi-occupied Paris On June 14, 1940, German tanks entered a silent and nearly deserted Paris. Eight days later, France accepted a humiliating defeat and foreign occupation. Subsequently, an eerie sense of normalcy settled over the City of Light. Many Parisians keenly adapted themselves to the situation-even allied themselves with their Nazi

overlords. At the same time, amidst this darkening gloom of German ruthlessness, shortages, and curfews, a resistance arose. Parisians of all stripes—Jews, immigrants, adolescents, communists, rightists, cultural icons such as Colette, de Beauvoir, Camus and Sartre, as well as police officers, teachers, students, and store owners—rallied around a little known French military officer, Charles de Gaulle. *WHEN PARIS WENT DARK* evokes with stunning precision the detail of daily life in a city under occupation, and the brave people who fought against the darkness. Relying on a range of resources---

memoirs, diaries, letters, archives, interviews, personal histories, flyers and posters, fiction, photographs, film and historical studies---

Rosbottom has forged a groundbreaking book that will forever influence how we understand those dark years in the City of Light.

**Resources and Lesson Plans for Teaching Art & Design Students** - Z Smith 2023-06-13

Are you supporting international students of creative disciplines to develop their English language skills? Perhaps you are teaching on a preparatory college course or maybe you need some original ideas on themes such as plastic

waste and upcycling for your teenage learners. When it comes to published materials to help develop language skills for international students on English for academic purposes (EAP) courses, they are often rather dry and too limited for developing the ability of art & design students to switch deftly between concrete and abstract ideas. This book provides content for up to 50 lessons. It covers the fundamentals of communicating in higher education contexts and introduces many original and relevant topics, with recurring emphases on sustainability and student-centeredness. The material can be used face-to-

face and/or online, and can be flexibly supplemented according to need.

Tunnels and Underground Cities. Engineering and Innovation Meet Archaeology, Architecture and Art - Daniele Peila 2019-04-17

Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The

growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International (ITA) and Italian (SIG) Tunnelling Association. By placing key infrastructures underground – the black circle in the logos – it will be possible to preserve and enhance the quality of the space at ground level

– the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life, and adaptability to future and varied functions. The 700 contributions cover a wide range of topics, from more traditional subjects connected to technical challenges of design and construction of underground works, with emphasis on innovation in tunneling engineering, to less conventional and archetypically Italian themes

such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering, materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management, contracts and financial aspects; Safety in underground construction; Strategic use

of underground space for resilient cities; Urban tunnels. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics. **Metronome** - Loránt Deutsch 2013-12-03

A phenomenal bestseller in France, *Metronome* presents a fascinating history of Paris through the lens of the city's iconic Metro system. Did you

know that the last Gallic warriors massacred by the Romans lie beneath the Eiffel Tower? That the remains of Paris's first cathedral are under a parking lot in the Fifth District? *Metronome* follows Loránt Deutsch, historian and lifelong Francophile, as he goes on a compelling journey through the ages, treating readers to Paris as they've never seen it before. Using twenty-one stops of the subway system as focal points—one per century—Deutsch shows, from the underground up, the unique, often violent, and always striking events that shaped one of the world's most romanticized cities. Readers will find

out which streets are hiding incredible historical treasures in plain sight; peer into forgotten nooks and crannies of the City of Lights and learn what used to be there; and discover that, however deeply buried, something always remains.

**Straphanger** - Taras Grescoe 2012-04-24

Taras Grescoe rides the rails all over the world and makes an elegant and impassioned case for the imminent end of car culture and the coming transportation revolution "I am proud to call myself a straphanger," writes Taras Grescoe. The

perception of public transportation in America is often unflattering—a squalid last resort for those with one too many drunk-driving charges, too poor to afford insurance, or too decrepit to get behind the wheel of a car. Indeed, a century of auto-centric culture and city planning has left most of the country with public transportation that is underfunded, ill maintained, and ill conceived. But as the demand for petroleum is fast outpacing the world's supply, a revolution in transportation is under way. Grescoe explores the ascendance of the straphangers—the growing number of people who rely on public transportation to go about the

business of their daily lives. On a journey that takes him around the world—from New York to Moscow, Paris, Copenhagen, Tokyo, Bogotá, Phoenix, Portland, Vancouver, and Philadelphia—Grescoe profiles public transportation here and abroad, highlighting the people and ideas that may help undo the damage that car-centric planning has done to our cities and create convenient, affordable, and sustainable urban transportation—and better city living—for all.

**Transport, Mobility, and the Production of Urban Space** - Julie Cidell 2015-05-01

The contemporary urban experience is defined by flow and structured by circulating people, objects, and energy. Geographers have long provided key insights into transportation systems. But today, concerns for social justice and sustainability motivate new, critical approaches to mobilities. Reimagining the city prompts an important question: How best to rethink urban geographies of transport and mobility? This original book explores connections – in theory and practice – between transport geographies and "new mobilities" in the production of urban space. It provides a broad introduction to intersecting

perspectives of urban geography, transport geography, and mobilities studies on urban "places of flows." Diverse, international, and leading-edge contributions reinterpret everyday intersections as nodes, urban corridors as links, cities and regions as networks, and the discourses and imaginaries that frame the politics and experiences of mobility. The chapters illuminate nearly all aspects of urban transport, from street regulation and roadway planning, intended and "subversive" practices of car and truck drivers, planning and promotion of mass transit investments, and the restructuring of

freight and logistics networks. Together these offer a unique and important contribution for social scientists, planners, and others interested in the politics of the city on the move.

**Riding the New York Subway** - Stefan Hohne  
2021-02-16

A history of New York subway passengers as they navigated the system's constraints while striving for individuality, or at least a smooth ride. When the subway first opened with much fanfare on October 27, 1904, New York became a city of underground passengers almost overnight. In this book, Stefan Höhne examines how the

experiences of subway passengers in New York City were intertwined with cultural changes in urban mass society throughout the twentieth century. Höhne argues that underground transportation--which early passengers found both exhilarating and distressing--changed perceptions, interactions, and the organization of everyday life.

**Great Maps** - Jerry Brotton 2014-09-01

Great Maps takes a close look at the history of maps, from ancient maps such as medieval mappae mundi to Google Earth. Why do we put north at the top of maps? Which maps show us the way to Heaven, and which show the "land of

no sunshine" or the land of "people with no bowels"? In *Great Maps*, author and historian Jerry Brotton tells the hidden story behind more than 60 of the most significant maps from around the world, picking out key features, stories, and techniques in rich visual detail to reveal the inner meaning buried within the landscape. Maps are not just geographical data: they reflect a particular ideological, historical, or cultural context. Providing a unique insight into how mapmakers have used maps to shape and depict their world view, this beautifully illustrated book traces the development of human development and culture

through its maps. From the earliest rock carvings to the latest geospatial technology, from ancient medieval mappae mundi to the first road atlas, *Great Maps* explores in stunning photographic detail how maps have influenced and reflected our world throughout history.

*Railway Maps of the World* - Mark Ovenden 2011  
A collection of international railway maps and posters features a chronological timeline from the Liverpool and Manchester Railway of 1830 to the proposed 2020 high-speed networks of China in an atlas representing more than one hundred countries.

## The Making of Grand Paris - Theresa Enright

2023-09-19

A critical examination of metropolitan planning in Paris—the “Grand Paris” initiative—and the building of today's networked global city. In 2007 the French government announced the “Grand Paris” initiative. This ambitious project reimagined the Paris region as integrated, balanced, global, sustainable, and prosperous. Metropolitan solidarity would unite divided populations; a new transportation system, the Grand Paris Express, would connect the affluent city proper with the low-income suburbs; streamlined institutions

would replace fragmented governance structures. Grand Paris is more than a redevelopment plan; it is a new paradigm for urbanism. In this first English-language examination of Grand Paris, Theresa Enright offers a critical analysis of the early stages of the project, considering whether it can achieve its twin goals of economic competitiveness and equality. Enright argues that by orienting the city around growth and marketization, Grand Paris reproduces the social and spatial hierarchies it sets out to address. For example, large expenditures for the Grand Paris Express are made not for the public good but to

increase the attractiveness of the region to private investors, setting off a real estate boom, encouraging gentrification, and leaving many residents still unable to get from here to there. Enright describes Grand Paris as an example of what she calls “grand urbanism,” large-scale planning that relies on infrastructural megaprojects to reconfigure urban regions in pursuit of speculative redevelopment. Democracy and equality suffer under processes of grand urbanism. Given the logic of commodification on which Grand Paris is based, these are likely to suffer as the project moves forward.

**Dear Paris - Janice MacLeod 2021-03-09**

learning the French language, a unique career in art and, best of all, the romance of a lifetime! C’est bon!” —Lynne Martin, author of Home Sweet Anywhere “Written as though to a best friend telling her story over lattes—or café crème. Relatable and inspiring . . . cleverly crafted with wit and unexpected wisdom.” —New York Journal of Books

London Underground By Design - Mark Ovenden  
2019-05-09

Since its establishment 150 years ago as the world's first urban subway, the London Underground has continuously set a benchmark

for design that many transit systems around the world - from New York to Tokyo to Moscow and beyond - have followed. London Underground by Design is the first meticulous study of every aspect of that feat. Beginning in the pioneering Victorian age, Mark Ovenden charts the evolution of architecture, branding, typeface, map design, interior and textile styles, posters, signage and graphic design and how all these came together to shape not just the identity of the Underground, but the character of London itself. This is the story of some of the most celebrated figures in design history - from Frank Pick, the guru who

conceptualised the design of the modern Tube with his idea of 'design fit for purpose', to Harry Beck, the creator of the Tube map, and from Marion Dorn, one of the leading textile designers of the 20th Century, to Edward Johnston, creator of the distinctive font that bears his name. Rich with stunning illustrations, London Underground by Design shows that design is about more than aesthetic pleasure, but is crucial to how we get around.

**Art Nouveau Architecture - Anne Anderson**

2020-11-23

Distinguished by their lavish sculpture, metalwork

or tile facades, Art Nouveau buildings certainly stand out. Art Nouveau buildings are unique, audacious and inspirational. Rejecting historic styles, considered inappropriate for an era driven by progress, architects and designers sought a new vocabulary of architectural forms. Their vision was shaped by modern materials and innovative technologies, including iron, glass and ceramics. A truly democratic style, Art Nouveau transformed life on the eve of the twentieth century and still captivates our imaginations today. Beautifully illustrated, this book explains how the new style came into being, its rationale

and why it is known by so many different names: French Art Nouveau, German Jugendstil, Viennese Secession, Catalan Modernisme, Italian Liberty and Portuguese Arte Nova. It covers the key architects and designers associated with the style; Victor Horta in Brussels, Hector Guimard in Paris, Antoni Gaudi on Barcelona, Otto Wagner in Vienna, Odon Lechner in Budapest and Charles Rennie Mackintosh in Glasgow. There are detailed descriptions and stunning photographs of buildings to be found in Brussels, Paris, Nancy, Darmstadt, Vienna, Budapest, Barcelona, Milan, Turin and Aveiro. Finally, it covers the decorative

arts, stained glass, tiles and metalwork that make Art Nouveau buildings so distinctive.

**Metro Maps of the World** - Mark Ovenden 2005

*The Image of the City* - Kevin Lynch 1964-06-15  
The classic work on the evaluation of city form.

What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

*London's Underground* - Oliver Green 2019-09-24

It is impossible to imagine London without the Tube: the beating heart of the city, the Underground shuttles over a billion passengers each year below its busy streets and across its leafy suburbs. The distinctive roundel, colour-coded maps and Johnston typeface have become design classics, recognised and imitated worldwide. Opening in 1863, the first sections were operated by steam engines, yet throughout its long history the Tube has been at the forefront of contemporary design, pioneering building techniques, electrical trains and escalators, and

business planning. Architects such as Leslie W. Green and Charles Holden developed a distinctively English version of Modernism, and the latest stations for the Jubilee line extension, Overground and Elizabeth line carry this aesthetic forward into the twenty-first century. In this major work published in association with Transport for London, Tube expert Oliver Green traces the history of the Underground, following its troubles and triumphs, its wartime and peacetime work, and the essential part it has played in shaping London's economy, geography, tourism and identity. Specially commissioned photography by

Benjamin Graham (UK Landscape Photographer of the Year 2017) brings the story to life in vivid portraits of London Underground's stations, tunnels and trains.

**Paris Underground** - Mark Ovenden 2009

**Airline Maps - Mark Ovenden 2019-11-21**

In this gorgeously illustrated collection of airline  
route maps, Mark Ovenden and Maxwell Roberts

look to the skies and transport readers to another  
time. Hundreds of images span a century of  
passenger flight, from the rudimentary trajectory  
of routes to the most intricately detailed birds-eye  
views of the land to be flown over.

Advertisements for the first scheduled commercial  
passenger flights featured only a few destinations,  
with stunning views of the countryside and  
graphics of biplanes. As aviation took off, speed  
and mileage were trumpeted on bold posters  
featuring busy routes. Major airlines produced  
highly stylized illustrations of their global  
presence, establishing now-classic brands. With

trendy and forward-looking designs, cartographers celebrated the coming together of different cultures and made the earth look ever smaller. Eventually, fleets got bigger and routes multiplied, and graphic designers have found creative new ways to display huge amounts of information. Airline hubs bring their own cultural mark and advertise their plentiful destination options. Innovative maps depict our busy world with webs of overlapping routes and networks of low-cost city-to-city hopping. But though flying has become more commonplace, Ovenden and Roberts remind us that early air travel was a glamorous

affair for good reason. Airline Maps is a celebration of graphic design, cartographic skills and clever marketing, and a visual feast that reminds us to enjoy the journey as much as the destination.

Paris Underground - Etta Shiber 2013-04-16

This early work on wartime Europe is both expensive and hard to find in its first edition. It details the history and individual experiences during World War II. This is a Fascinating work and is highly recommended for anyone interested in European History. Many of the earliest books, particularly those dating back to the 1900s and

before, are now extremely scarce. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

**Underground Cities - Mark Ovenden 2020-09-08**

With over 60 per cent of the world's population living in cities, the networks beneath our feet – which keep the cities above moving – are more important than ever before. Yet we never truly see how these amazing feats of engineering work. Just how deep do the tunnels go? Where do the sewers, bunkers and postal trains run? And, how many tunnels are there under our streets? Each featured city presents a 'skyline of the underground' through specially commissioned cut-away illustrations and unique cartography.

Drawing on geography, cartography and historical oddities, Mark Ovenden explores what our cities look like from the bottom up.

Designing Information - Joel Katz 2012-08-20

"The book itself is a diagram of clarification, containing hundreds of examples of work by those who favor the communication of information over style and academic postulation—and those who don't. Many blurbs such as this are written without a thorough reading of the book. Not so in this case. I read it and love it. I suggest you do the same." —Richard Saul Wurman "This handsome, clearly organized book is itself a

prime example of the effective presentation of complex visual information." —eg magazine "It is a dream book, we were waiting for...on the field of information. On top of the incredible amount of presented knowledge this is also a beautifully designed piece, very easy to follow..." —Krzysztof Lenk, author of Mapping Websites: Digital Media Design "Making complicated information understandable is becoming the crucial task facing designers in the 21st century. With Designing Information, Joel Katz has created what will surely be an indispensable textbook on the subject." —Michael Bierut "Having had the pleasure of a

sneak preview, I can only say that this is a magnificent achievement: a combination of intelligent text, fascinating insights and - oh yes - graphics. Congratulations to Joel." —Judith Harris, author of *Pompeii Awakened: A Story of Rediscovery* Designing Information shows designers in all fields - from user-interface design to architecture and engineering - how to design complex data and information for meaning, relevance, and clarity. Written by a worldwide authority on the visualization of complex information, this full-color, heavily illustrated guide provides real-life problems and examples as

well as hypothetical and historical examples, demonstrating the conceptual and pragmatic aspects of human factors-driven information design. Both successful and failed design examples are included to help readers understand the principles under discussion.

**The History of the London Underground Map -**  
Caroline Roope 2022-10-30

Few transportation maps can boast the pedigree that London's iconic 'Tube' map can. Sported on t-shirts, keyrings, duvet covers, and most recently, downloaded an astonishing twenty million times in app form, the map remains a long-standing icon of British design and ingenuity. Hailed by the art and design community as a cultural artifact, it has also inspired other culturally important pieces of artwork, and in 2006 was voted second in BBC 2's Great British Design Test. But it almost didn't make it out of the

notepad it was designed in. The story of how the Underground map evolved is almost as troubled and fraught with complexities as the transport network it represents. Mapping the Underground was not for the faint-hearted – it rapidly became a source of frustration, and in some cases obsession – often driving its custodians to the point of distraction. The solution, when eventually found, would not only revolutionise the movement of people around the city but change the way we visualise London forever. Caroline Roope's wonderfully researched book casts the Underground in a new light, placing the world's

most famous transit network and its even more famous map in its wider historical and cultural context, revealing the people not just behind the iconic map, but behind the Underground's artistic and architectural heritage. From pioneers to visionaries, disruptors to dissenters – the Underground has had them all – as well as a constant stream of (often disgruntled) passengers. It is thanks to the legacy of a host of reformers that the Tube and the diagram that finally provided the key to understanding it, have endured as masterpieces of both engineering and design.

## Paris in the Dark - Eric Smoodin 2020-03-27

In Paris in the Dark Eric Smoodin takes readers on a journey through the streets, cinemas, and theaters of Paris to sketch a comprehensive picture of French film culture during the 1930s and 1940s. Drawing on a wealth of journalistic sources, Smoodin recounts the ways films moved through the city, the favored stars, and what it was like to go to the movies in a city with hundreds of cinemas. In a single week in the early 1930s, moviegoers might see Hollywood features like King Kong and Frankenstein, the

new Marlene Dietrich and Maurice Chevalier movies, and any number of films from Italy, Germany, and Russia. Or they could frequent the city's ciné-clubs, which were hosts to the cinéophile subcultures of Paris. At other times, a night at the movies might result in an evening of fascist violence, even before the German Occupation of Paris, while after the war the city's cinemas formed the space for reconsolidating French film culture. In mapping the cinematic geography of Paris, Smoodin expands understandings of local film exhibition and the relationships of movies to urban space.
