**Combinations** - Irving Chernev  
2012-08-30

Irving Chernev's outstanding chess books earn him a high rank among the world's top chess authors. In this well-annotated text, Mr. Chernev guides his readers to an understanding of the subtleties of combinative play. Step-by-step from the simplest combinations to the most

complex, the book explains the intricacies of pins and counter-pins, Knight forks, smothered mates, and other elements of combination play. There is a discussion in chapter five of combinations lurking in roads not taken — alternate lines of play show up in Chernev's notes to the game, while the sixth chapter, "Convincing the

Kibitzers," shows the second-guessers what would have happened had the masters done the obvious. (Some disastrous combinations show up here.) A host of boomerangs follow — cases where the player didn't look far enough ahead and his combination, instead of bringing about the opponent's ruin, paved the way to his defeat. Chapters eight through twenty one take up combinations used by such great players as Tarrasch, Botvinnik, Nimzovich, Steinitz, Rubinstein, and Pillsbury; the sacrificial combinations of Anderssen and Spielmann; the dazzling brilliancies of Morphy, Keres, and Alekhine; the deadly attacks of Marshall; the almost unfathomable ideas of Lasker; and the matchless creations of Capablanca. Mr. Chernev's thoughtful annotations unravel the secrets of each of these plans. A diagram accompanies each combination; an index, by player, leads the reader to the

combination he is looking for.

**An Introduction to Behavioural Ecology** - Nicholas B. Davies

2012-04-02

This textbook helped to define the field of Behavioural Ecology. In this fourth edition the text has been completely revised, with new chapters and many new illustrations and full colour photographs. The theme, once again, is the influence of natural selection on behaviour – an animal's struggle to survive and reproduce by exploiting and competing for resources, avoiding predators, selecting mates and caring for offspring, – and how animal societies reflect both cooperation and conflict among individuals. Stuart A. West has

joined as a co-author bringing his own perspectives and work on microbial systems into the book. Written in the same engaging and lucid style as the previous editions, the authors explain the latest theoretical ideas using examples from micro-organisms, invertebrates and vertebrates. There are boxed sections for some topics and marginal notes help guide the reader. The book is essential reading for students of behavioural ecology, animal behaviour and evolutionary biology. Key Features: Long-awaited new edition of a field-defining textbook New chapters, illustrations and colour photographs New co-author Focuses on the influence of natural selection on behavior, and how animal societies reflect both cooperation and conflict among individuals “The long-awaited update to a classic in this field is now here, presenting new directions in thinking and addressing burning questions. Richly

informed by progress in many other disciplines, such as sensory physiology, genetics and evolutionary theory, it marks the emergence of behavioural ecology as a fully fledged discipline..... This is a marvellous book, written in a lucid style. A must-read for those in the field, it is also a cornucopia of new thinking for anyone interested in evolution and behaviour.”

Manfred Milinski, Nature, 2012  
**Chess Theory from Stamma to Steinitz, 1735-1894** - Frank Hoffmeister 2022-12-07

Most chess biographies present the games of famous players--but not their writings. Filling that gap, this book begins with Syrian master and author of chess studies Philip Stamma, and finishes with the first world champion William Steinitz. The main novelties in opening, middlegame and endgame theory in the 160 year period are examined and biographical sketches put the contributions of

more than 30 masters into context. The author presents many new insights--for example, regarding the origins of the Ponziani Opening, the Dutch Defense and the Petroff Defense. French star La Bourdonnais used other sources for almost every part of his Nouveau Traite. Morphy's analysis of the Philidor Defense was faulty and Anderssen's play included many positional ideas. Harrwitz and Neumann published modern treatises long before Steinitz came out with his Modern Chess Instructor. Many ending themes belong to less well-known authors, such as Cozio, Chapais, van Zuylen van Nyevelt, Sarratt, Kling and Horwitz, Berger and Salvio.
