Jacqueline Rosenjack  
Burchum 2021-09-10  
Trust Lehne's to make pharmacology more approachable! Known for its clear explanations of drug prototypes and how they work, Lehne's Pharmacology

for Nursing Care, 11th Edition provides a solid understanding of key drugs and their implications for nursing care. A perennial student favorite, this book simplifies complex pharmacology concepts, using large and small print to distinguish need-to-know

drug content from the material that's merely nice to know. It also includes in-depth coverage of physiology, pathophysiology and drug therapy. Written by noted nursing educators Jacqueline Rosenjack Burchum and Laura Rosenthal, this text helps you understand and apply pharmacology principles as opposed to simply memorizing drug facts. Clear, engaging writing style simplifies complex concepts, making difficult pharmacology content not only understandable but actually enjoyable. Prototype Drugs approach focuses on representative drugs that characterize all members of a given drug group, so that you can apply your understanding to related drugs currently on the market as well as drugs that will be released in the future. Nursing implications of drug therapy are integrated throughout the text to reinforce the integral relationship between drug

therapy and nursing care, and also summarized in Summary of Major Nursing Implications sections at the end of chapters. Special Interest Topic boxes examine the everyday impact of pharmacology with vignettes including Medication Overuse Headache: Too Much of a Good Thing and Antibiotics in Animal Feed: Dying for a Hamburger and Chicken Nuggets. Large print highlights essential, need-to-know information, and small print indicates nice-to-know information. Safety Alerts call out important safety concerns related to contraindications, adverse effects, and more. Patient-Centered Care Across the Life Span tables highlight safe and appropriate care for patients throughout their lives, from infancy to older adulthood. Concise drug summary tables present key information for individual drugs, including drug class, generic and trade names, dosages, routes, and

indications. NEW!  
Thoroughly updated drug content reflects the latest FDA drug approvals, withdrawals, and therapeutic uses, with revisions to the corresponding nursing content. NEW chapters include Genetic and Genomic Considerations, Muscarinic Antagonists, and Complementary and Alternative Therapy.

It provides the background needed to understand related drugs currently on the market, as well as drugs yet to be released. In simplifying a complex subject, this text focuses on the essentials of pharmacology. Large print is used to show "need-to-know" information, and small print is used for "nice

to know" material. At the end of each chapter, a summary of major nursing implications helps in applying the material to real-world situations. This edition includes a new companion CD-ROM featuring NCLEX examination-style review questions, a variety of electronic calculators, and animations depicting drug mechanisms and effects.

**Medical-Surgical Nursing E-Book** - Adrienne Dill Linton 2022-05-01

Provide quality nursing care for adults with medical-surgical and psychiatric disorders! Building upon the fundamentals of nursing, *Medical-Surgical Nursing, 8th Edition* helps you master the role and responsibilities of the LPN/LVN in medical-surgical care. The text addresses the special problems of older adult patients, then covers each major disorder by body system, presenting patient problems, goals, outcome criteria, and nursing

interventions. As LPN/LVNs do not formulate NANDA diagnoses, the book is organized by patient problems rather than NANDA nursing diagnoses. Written by noted educators Adrienne Dill Linton and Mary Ann Matteson, this text helps you build the clinical judgment skills you need to succeed on the Next-Generation NCLEX-PN® examination and in nursing practice.

ORGANIC CHEMISTRY is a student-friendly, cutting edge introduction for chemistry, health, and the biological sciences majors. In the Eighth Edition, award-winning authors build on unified mechanistic themes, focused problem-solving, applied pharmaceutical problems and biological examples. Stepwise reaction mechanisms emphasize similarities among mechanisms using four traits: breaking a bond, making a new bond, adding a proton, and taking a proton away. Pull-out organic chemistry reaction roadmaps designed stepwise by chapter help students devise their own reaction pathways. Additional features designed to ensure student success include in-margin highlighted integral concepts, new end-of-chapter study guides, and worked examples. This edition also includes brand

new author-created videos. Emphasizing “how-to” skills, this edition is packed with challenging synthesis problems, medicinal chemistry problems, and unique roadmap problems. *Pharmacology Online to Accompany Pharmacology for Nursing Care* - Richard A. Lehne 2004-11

This rich library of online assets is an essential tool for building a fully online or web-enhanced nursing pharmacology course that corresponds to Lehne's best-selling Pharmacology for Nursing Care, 5th Edition. A wealth of interactive assets are provided for students, including Self-Study Modules covering the basic principles of pharmacology, branching Case Studies, interactive

Learning Activities, Video Clips, an online Drug Handbook, Audio Clips, Discussion Threads, WebLinks, and an Image Collection. Instructor assets include a PowerPoint Collection, Test Bank, and WebLinks. Assets are presented in two views - a Unit View (corresponding to the units in the Lehne textbook) and an Asset View (assets are organized by asset type). Self-Study Modules on the basic principles of pharmacology serve as a convenient adjunct to textbook material or classroom presentation. Students can work through the 11 animation-enhanced modules as often as needed to ensure comprehension, then submit an NCLEX examination-style assessment to their instructor. Branching Case Studies immerse students in true-to-life clinical scenarios and ask them to make choices in patient care. The 18 cases unfold differently depending on the choices

that the student makes, and remediation is provided for incorrect choices. At the end of the case, the student submits an NCLEX examination-style assessment to the instructor. An online Drug Handbook is available to help students work through issues of drug dosage and administration. Interactive Learning Activities include activity themes such as What Drug Am I? Two activities are provided for each Unit of the Lehne text, for a total of 40 activities. 10 Roadside Assistance video clips feature nationally known pharmacologist and speaker Alan P. Agins, PhD, presenting core pharmacology concepts with a uniquely memorable flair. Audio Clips are provided for approximately 450 key terms in pharmacology, including the generic names of the top 100 drugs. Discussion Threads (three per Lehne Unit, for a total of 60) are thought-provoking questions that faculty can

post for student discussion. A 400-item Image Collection includes every image from Elsevier's top-selling nursing pharmacology textbooks, plus all of the images from the Self-Study Modules. A freestanding collection of 18 Animations includes every animation from the Self-Study Modules, for incorporation into faculty-created presentations. Includes WebLinks corresponding to every chapter in the Lehne textbook. This dynamic library of links is updated quarterly to ensure currency. The PowerPoint Collection includes some 600 text slides that can be used as is or customized by the instructor. The Test Bank includes 750 items in a format consistent with the NCLEX Examination, each coded with correct answer, nursing process step, NCLEX client needs category, and cognitive type. Files are delivered in ExamView, Blackboard Assessment Manager, and Word.

clinically current content as the trusted Lehne undergraduate text, while focusing on the information that advanced practice nurses and Physician Assistants specifically need for safe and effective prescribing. Three introductory chapters provide foundational content for new prescribers in the areas of prescriptive authority, rational drug selection, prescription writing, and promoting positive outcomes of drug therapy. Core drug chapters are focused on the drugs that prescribers will most commonly see in clinical practice. A sharp focus is also placed on pharmacotherapeutic decision-making, with Black Box Warnings and new bulleted Key Prescribing Considerations features. The second edition features completely new chapters on Genetic and Genomic Considerations, Muscarinic Antagonists and Immunomodulators, and

updated content throughout. It's everything advanced practice nursing and Physician Assistant students need to be safe and effective prescribers! Introductory chapters tailored to the specific needs of prescribers cover topics such as prescriptive authority, rational drug selection and prescription writing, and promoting positive outcomes of drug therapy. Carefully focused pharmacotherapeutic content reflects the drugs most commonly seen and used by prescribers, with emphasis not on the first drug discovered or developed in each class but on the agents most often used today. Primary care drugs are addressed first in each chapter as appropriate, followed by acute care drugs. UNIQUE! Prescriber-focused pedagogical aids further reinforce the most important information for prescribers. Integrated coverage of Canadian trade names appears throughout

the text and is highlighted with a familiar maple-leaf icon. Integrated coverage of interprofessional collaboration addresses the growing global interest in interprofessional collaboration and incorporates opportunities for interprofessional collaborative practice throughout.
