Allora and Calzadilla Specters of Noon - Michelle White
2021-02-09

A beautiful presentation of a new suite of works made for the Menil Collection by Allora & Calzadilla The Puerto Rico-based collaborative duo Allora & Calzadilla created *Specters of Noon* as a group of seven large-scale works specifically for the Menil Collection. The ensemble is orchestrated around the idea of solar noon, a notion derived from Surrealist texts by Caillois, Césaire, and others that probe the transcultural mythology of noon--a time when shadows vanish and delirious visions momentarily reign. The works include light projections, guano, ship engines, live vocal performance, and coal. Using the Menil's Surrealist holdings as a point of departure, *Specters of Noon* is infused throughout with a Caribbean perspective that addresses the instability of environmental and colonial politics; one work is a power transformer damaged in Hurricane Maria that is half-sheathed in bronze. Filled with stunning installation photography and insightful texts both commissioned and reprinted, this volume

captures the spirit of Jennifer Allora (b. 1974) and Guillermo Calzadilla's (b. 1971) deeply researched and multifaceted work.

The World's First Stock Exchange - Lodewijk Petram 2014-05-27

This account of the sophisticated financial hub that was 17th-century Amsterdam "does a fine job of bringing history to life" (Library Journal). The launch of the Dutch East India Company in 1602 initiated Amsterdam's transformation from a regional market town into a dominant financial center. The Company introduced easily transferable shares, and within days buyers had begun to

trade them. Soon the public was engaging in a variety of complex transactions, including forwards, futures, options, and bear raids, and by 1680 the techniques deployed in the Amsterdam market were as sophisticated as any we practice today. Lodewijk Petram's award-winning history demystifies financial instruments by linking today's products to yesterday's innovations, tying the market's operation to the behavior of individuals and the workings of the world around them. Traveling back in time, Petram visits the harbor and other places where merchants met to strike deals. He bears witness to the goings-on at a notary's office and sits in on the consequential proceedings of a courtroom. He describes in detail the main players, investors, shady characters, speculators, and domestic servants and other ordinary folk, who all played a role in the development of the market and its crises. His history clarifies concerns that investors still struggle with today—such as fraud, the value of information, trust and the place of honor, managing diverging expectations, and balancing risk—and does so in a way that is vivid, relatable, and critical to understanding our contemporary world.

David Vizard's How to Port and Flow Test Cylinder Heads - David Vizard 2012

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional

results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

Mechanization for Rural Development - Josef Kienzle 2013
This publication gives a wide-ranging perspective on the present state of mechanization in the developing world, and, as such, constitutes a solid platform on which to build strategies for a sustainable future. Farm mechanization forms an integral plank in the implementation of sustainable crop production intensification methodologies and sustainable intensification necessarily means that the protection of natural resources and the production of ecosystem services go hand-in-hand with intensified production practices. This requires specific mechanization measures to allow crops to be established with minimum soil disturbance, to allow the soil to be protected under organic cover for as long as possible, and to establish crop rotations and associations to feed the soil and to exploit crop nutrients from various soil horizons. This work is the starting point to help the reader understand the complexities and requirements of the task ahead.

Port Strategy for Sustainable Development - Elvira Haezendonck 2021-03-23

Today, most large port hubs include the circular economy transformation challenge, together with smart digitalization and Internet of Things (IoT), in their strategic priorities. However, many ports do not seem to have progressed beyond incremental, small-scale sustainable innovations or the support of rather fragmented sustainability initiatives. The challenges are complex, since ports do not only have to reconsider their own core activities but also their role in the supply chain of shippers, to lift themselves out of the linear lock-in. Opportunities are also created, and port authorities and businesses need to embrace circular learning and turn these projects into sustainable business models. This strategic change or refocus requires new insights into innovative governance and business frameworks, the link between strategy and commercially viable business models, systems innovation, intensified stakeholder collaboration and co-creation, altered traffic segments and hinterland focus, amongst

others. These Special Issue articles address current CE transition concerns salient to port strategists and managers, such as first strategic changes towards circular ports, building awareness on the importance of sustainability data and available space, and how port authorities can develop circular business models.
