Contracts for Infrastructure Projects - Philip Loots 2022-05-18

Contracts for Infrastructure Projects: An International Guide provides a guide to the law relating to construction contracts for infrastructure projects; it is intended for the use of engineers and other professionals who are involved in the negotiation and administration of construction contracts, to enable them to understand the risks involved, and how to minimise them. The principles of construction law outlined in this book apply to small construction contracts as well as very large contracts for which the contract sum may be in the billions of dollars. The focus of the book is on construction contracts entered into by commercial organisations operating in a business environment. Contract law generally assumes that such parties are of equal bargaining power and puts relatively few fetters on their ability to agree on the terms of their bargain. However, where legislation impacts on the execution of construction projects or the operation of construction contracts it may be of major importance in protecting the rights of weaker parties or third parties. It is assumed that the users of this book will be familiar with the general concepts of tendering and contracting for engineering and construction projects but may not have any formal knowledge of the law. To the extent possible, the emphasis is on general principles of contract law that are widely accepted in many jurisdictions. Examples are drawn from case law in a number of common law jurisdictions, as well as from civil codes.

FIDIC Contracts in Asia Pacific - Donald Charrett 2021-11-30

FIDIC contracts are the most widely used contracts for international construction around the world and are used in many different jurisdictions, both common law and civil law. For any construction project, the General Conditions of Contract published by FIDIC need to be supplemented by Particular Conditions that specify the specific requirements of that project subject to the relevant laws. FIDIC Contracts in Asia Pacific provides readers with detailed guidance and resources for the preparation of the Particular Conditions that will comply with the requirements of the applicable laws for a number of the jurisdictions in which FIDIC contracts are used. The laws that apply to the governing law of the contract,

construction works and dispute resolution in each jurisdiction are identified.

This book offers chapters on the FIDIC Conditions of Contract for Underground Works, and the perspective of a bilateral aid agency on the use of FIDIC contracts. Each jurisdiction features an outline of its construction industry and information on the impact of Covid-19 on both the execution of construction projects and the operation of construction contracts. This book is essential reading for construction professionals, lawyers and students of construction law using FIDIC contracts.

How to Invent and Protect Your Invention - Joseph P. Kennedy 2012-08-28

A straightforward guide to inventing, patenting, and technology commercialization for scientists and engineers Although chemists, physicists, biologists, polymer scientists, and engineers in industry are involved in potentially patentable work, they are often under-prepared for this all-important field. This book provides a clear, jargon-free, and comprehensive overview of the patenting process tailored specifically to the needs of scientists and engineers, including: Requirements for a patentable invention How to invent New laws created by President Obama's 2011 America Invents Act The process of applying for and obtaining a patent in the U.S. and in foreign countries Commercializing inventions and the importance of innovation Based on lecture notes refined over twenty-five years at The University of Akron, How to Invent and Protect Your Invention contains practical advice, colorful examples, and a wealth of personal experience from the authors.

In the Shadows of State and Capital - Steve Striffler 2001-11-23
Winner of the 2001 President's Award of the Social Science History Association In the Shadows of State and Capital tells the story of how Ecuadorian peasants gained, and then lost, control of the banana industry. Providing an ethnographic history of the emergence of subcontracting within Latin American agriculture and of the central role played by class conflict in this process, Steve Striffler looks at the quintessential form of twentieth-century U.S. imperialism in the region—the banana industry and, in particular, the United Fruit Company (Chiquita). He argues that, even within this highly stratified industry, popular struggle has contributed

greatly to processes of capitalist transformation and historical change. Striffler traces the entrance of United Fruit into Ecuador during the 1930s, its worker-induced departure in the 1960s, the troubled process through which contract farming emerged during the last half of the twentieth century, and the continuing struggles of those involved. To explore the influence of both peasant activism and state power on the withdrawal of multinational corporations from banana production, Striffler draws on state and popular archives, United Fruit documents, and extensive oral testimony from workers, peasants, political activists, plantation owners, United Fruit administrators, and state bureaucrats. Through an innovative melding of history and anthropology, he demonstrates that, although peasant-workers helped dismantle the foreign-owned plantation, they were unable to determine the broad contours through which the subsequent system of production—contract farming—emerged and transformed agrarian landscapes throughout Latin America. By revealing the banana industry's impact on processes of state formation in Latin America, *In the Shadows of State and Capital* will interest historians, anthropologists, and political scientists, as well as scholars of globalization and agrarian studies.

Rough Justice - A True Story - Robert Steele 2013-06-06

This is a true story about a shop steward who had 83 grievances with his employer over a 14 month period. By doing his best as a shop steward, he ended up with 57 personal grievances and was threatened with the sack 8 times and was actually sacked twice. The Trade Unions District Audit were informed of these problems though they seemed to decide to protect the employer rather than their union member. Solicitors and barristers were subsequently involved however time passed and this led to time running out for a potential claim. The issues were put into court which, in the opinion of the author, led to rough justice.

Labour & Employment - Matthew Howse 2017-05-25

Labour & Employment, edited by Matthew Howse, Sabine Smith-Vidal, Walter Ahrens and Mark Zelek of Morgan Lewis & Bockius LLP, enables you to understand the maze of employment laws needed to deal with a global workforce, covering areas such as: legislation and agencies, worker representation, background information on applicants, terms of employment, foreign workers, liability of acts of employees, taxation of employees, employee-created IP, termination of employment and dispute resolution. In an easy-to-use question and answer format, trusted and reliable information on key topics of law and regulation in this area is provided by leading practitioners around the world. As well as in-depth

comparative study of the topic in 40 jurisdictions, there are also editorial chapters covering gender pay equality and a global overview. "The comprehensive range of guides produced by GTDT provides practitioners with an extremely useful resource when seeking an overview of key areas of law and policy in practice areas or jurisdictions which they may otherwise be unfamiliar with." Intellectual Property and Health Technologies - Joanna T. Brougher 2013-11-08

Intellectual Property and Health Technologies Balancing Innovation and the Public's Health Joanna T. Brougher, Esq., MPH At first glance, ownership of intellectual property seems straightforward: the control over an invention or idea. But with the recent explosion of new scientific discoveries poised to transform public health and healthcare systems, costly and lengthy patent disputes threaten both to undermine the attempts to develop new medical technologies and to keep potentially life-saving treatments from patients who need them. Intellectual Property and Health Technologies grounds readers in patent law and explores how scientific research and enterprise are evolving in response. Geared specifically to the medical disciplines, it differentiates among forms of legal protection for inventors such as copyrights and patents, explains their limits, and argues for balance between competing forces of exclusivity and availability. Chapters delve into the major legal controversies concerning medical and biotechnologies in terms of pricing, markets, and especially the tension between innovation and access, including: The patent-eligibility of genes The patent-eligibility of medical process patents The rights and roles of universities and inventors The balancing of access, innovation, and profit in drug development The tension between biologics, small-molecule drugs, and their generic counterparts International patent law and access to medicine in the developing world As these issues continue to shape and define the debate, Intellectual Property and Health Technologies enables professionals and graduate students in public health, health policy, healthcare administration, and medicine to understand patent law and how it affects the development of medical technology and the delivery of medicine.

Patents and Professors - Anna Marion Bieri 2022-06-14

Who owns inventions developed at US research universities? And who benefits from the current ownership regime? To answer these questions,

Anna Marion Bieri discusses the transformation which has taken place in academia in regard to the involvement and commercialisation of patents and the effect university patenting has had on the academic mission and the scientific commons. Special emphasis is placed on the history and implementation of the Bayh-Dole Act - a widely-discussed law which facilitated the patenting and commercialisation of federally funded university inventions. On this basis, the author explores who should benefit from university inventions and how the current ownership regime should be modified to achieve this purpose. Finally, Anna Marion Bieri proposes that universities employ patents strategically in accordance with their research strengths.
