in general probability of an event happening number of ways it can happen total number of outcomes example the chances of rolling a 4 with a die number of ways it can happen 1 there is only 1 face with a 4 on it total number of outcomes 6 there are 6 faces altogether so the probability  $\frac{1}{6}$

## how to calculate probability formula examples and steps

to find the percentage of a determined probability simply convert the resulting number by 100 for example in the example for calculating the probability of rolling a 6 on two dice  $\frac{1}{6} \times \frac{1}{6} = \frac{1}{36}$  take  $\frac{1}{36}$  to get the decimal and multiple by 100 to get the percentage  $\frac{1}{36} \times 100 = 2.78\%$
