Never for Want of Powder - C. L. Bragg 2007

Lavishly illustrated with seventy-four color plates and fifty black-and-white photographs and drawings, *Never for Want of Powder* tells the story of a world-class munitions factory constructed by the Confederacy in 1861, the only large-scale permanent building project undertaken by a government often characterized as lacking modern industrial values. In this comprehensive examination of the

powder works, five scholars--a historian, physicist, curator, architectural historian, and biographer--bring their combined expertise to the task of chronicling gunpowder production during the Civil War. In doing so, they make a major contribution to understanding the history of wartime technology and Confederate ingenuity. Early in the war President Jefferson Davis realized the Confederacy's need to supply its own gunpowder. Accordingly Davis selected Col. George Washington Rains to build a gunpowder factory. An engineer and West Point graduate, Rains relied primarily on a written pamphlet rather than on practical experience in building the powder mill, yet he succeeded in designing a model of efficiency and safety. He sited the facilities at Augusta,

Georgia, because of the city's central location, canal transportation, access to water power, railroad facilities, and relative security from attack. As much a story of people as of machinery, *Never for Want of Powder* recounts the ingenuity of the individuals involved with the project. A cadre of talented subordinates--including Frederick Wright, C. Shaler Smith, William Pendleton, and Isadore P. Girardey--assisted Rains to a degree not previously appreciated by historians. This volume also documents the coordinated outflow of gunpowder and ammunition, and Rains's difficulty in preparing for the defense of Augusta. Today a lone chimney along the Savannah River stands as the only reminder of the munitions facility

that once occupied that site. With its detailed reproductions of architectural and mechanical schematics and its expansive vista on the Confederacy, *Never for Want of Powder* restores the Augusta Powder Works to its rightful place in American lore.

Rock Mechanics: Achievements and Ambitions - Meifeng Cai 2011-09-22

Rock Mechanics: Achievements and Ambitions contains the papers accepted for the 2nd ISRM International Young Scholars' Symposium on Rock Mechanics, which was sponsored by the ISRM and held on 14–16 October 2011 in Beijing, China, immediately preceding the 12th ISRM Congress on Rock Mechanics.

Highlighting the work of young

teachers, researchers and practitioners, the present work provides an important stimulus for the next generation of rock engineers, because in the future there will be more emphasis on the use of the Earth's resources and their sustainability, and more accountability of engineers' decisions. In this context, it is entirely appropriate that the Symposium venue for the young scholars was in China – because of the rock mechanics related work that is anticipated in the future. For example, in the Chinese Academy of Sciences report, "Energy Science and Technology in China: A Roadmap to 2050", it is predicted that China's total energy demand will reach 31, 45, 61 and 66 x 10⁸ tce (tonnes of coal equivalent) in 2010, 2020, 2035,

2050. The associated per capita energy consumption for the same years is estimated at 2.3, 3.1, 4.1 and 4.6 tce. This increasing demand will be met, inter alia, by the continued operation and development of new coal mines, hydroelectric plants and nuclear power stations with one or more underground nuclear waste repositories, all of which will be improved by more modern methods of rock engineering design developed by young scholars. In particular, enhanced methods of site investigation, rock characterisation, rock failure understanding, computer modelling, and rock excavation and support are needed. The topics in the book include contributions on: - Field investigation and observation - Rock constitutive relations and property testing - Numerical and

physical modeling for rock engineering - Information technology, artificial intelligence and other advanced techniques - Underground and surface excavation and reinforcement techniques - Dynamic rock mechanics and blasting - Predication and prevention of geo-environmental hazard - Case studies of typical rock engineering Many of the 200 papers address these topics and demonstrate the skills of the young scholars, indicating that we can be confident in the continuing development of rock mechanics and rock engineering, leading to more efficient, safer and economical structures built on and in rock masses. Rock Mechanics: Achievements and Ambitions will appeal to professionals, engineers and academics in rock mechanics, rock engineering, tunnelling, mining,

earthquake engineering, rock dynamics and geotechnical engineering.
