The Routledge Handbook of Designing Public Spaces for Young People - Janet Loebach 2020-06-23

The Routledge Handbook of Designing Public Spaces for Young People is a thorough and practical resource for all who wish to influence policy and design decisions in order to increase young people's access to and use of public spaces, as well as their role in design and decision-making processes. The ability of youth to freely enjoy public spaces, and to develop a sense of belonging and attachment to these environments, is critical for their physical, social, cognitive, and emotional development. Young people represent a vital citizen group with legitimate rights to occupy and shape their public environments, yet they are often

driven out of public places by adult users, restrictive bylaws, or hostile designs. It is also important that children and youth have the opportunity to genuinely participate in the planning of public spaces, and to have their needs considered in the design of the public realm. This book provides both evidence and tools to help effectively advocate for more youth-inclusive public environments, as well as integrate youth directly into both research and design processes related to the public realm. It is essential reading for researchers, design and planning professionals, community leaders, and youth advocates.

Popular Culture, New Media and Digital Literacy in Early Childhood - Jackie Marsh 2005

This book offers a range of perspectives on children's multimodal experiences, providing a ground-breaking account of the ways in

which children engage with popular culture, media and digital literacy practices from their earliest years. Many young children have extensive experience of film, television, printed media, computer games, mobile phones and the Internet from birth, yet their reaction to media texts is rarely acknowledged in the national curricula of any country. This seminal text focuses on children from birth to eight years, addressing issues such as: * media and identity construction * media literacy practices in the home * the changing nature of literacy in technologically advanced societies * The place of popular and media texts in children's lives and the use of such texts in the curriculum. By exploring children's engagement with popular culture, media and digital texts in the home, community and early years settings, the contributors look at empirical studies from around the world, and draw out vital new theoretical issues relating to children's emergent techno-literacy practices. With an unmatched team of international experts evaluating topics from text-messaging to the Teletubbies, this book is a long-overdue, fascinating and illuminating read for policy-makers, educational researchers and practitioners, and crosses over to appeal to those in the linguistics field.

Circulation, Writing, and Rhetoric - Laurie Gries 2018-04-15

While it has long been understood that the circulation of discourse, bodies, artifacts, and ideas plays an important constitutive force in our cultures and communities, circulation, as a concept and a phenomenon, has been underexamined in studies of rhetoric and writing. In an effort to give circulation its rhetorical due, *Circulation, Writing, and Rhetoric* introduces a wide range of studies that foreground circulation in both theory and practice. Contributors to the volume specifically explore the connections between circulation and public rhetorics, urban studies, feminist rhetorics, digital communication, new materialism, and digital research. Circulation is a cultural-rhetorical process that impacts various ecologies, communities, and subjectivities in an ever-increasing globally networked environment. As made evident in this collection, circulation occurs in all forms of discursive production, from academic arguments to neoliberal policies to graffiti to tweets and bitcoins. Even in the case of tombstones, borrowed text achieves only partial stability before it is recirculated and transformed again. This communicative process is even more evident in the digital realm, the underlying infrastructures of which we have yet to fully understand. As public spaces become more and more saturated with circulating texts and images and as networked relations come to the center of rhetorical focus, *Circulation, Writing, and Rhetoric* will be a vital interdisciplinary resource for approaching the contemporary dynamics of rhetoric and writing. The Theory and Practice of Social Machines - Nigel Shadbolt
2019-02-14

Social machines are a type of network connected by interactive digital devices made possible by the ubiquitous adoption of technologies such as the Internet, the smartphone, social media and the read/write World Wide Web, connecting people at scale to document situations, cooperate on tasks, exchange information, or even simply to play. Existing social processes may be scaled up, and new social processes enabled, to solve problems, augment reality, create new sources of value, and disrupt existing practice. This book considers what talents one would need to understand or build a social machine, describes the state of the art, and speculates on the future, from the perspective of the EPSRC project SOCIAM – The Theory and Practice of Social Machines. The aim is to develop a set of tools and techniques for investigating, constructing and facilitating social machines, to enable us to narrow down pragmatically what is becoming a wide space, by asking ‘when will it be valuable to use these methods on a sociotechnical system?’ The systems for which the use of these methods adds value are social machines in which there is rich person-to-person communication, and where a large proportion of the machine’s behaviour is constituted by human interaction.

They will work great in Kindergarten to challenge students. They are perfect in 1st Grade and 2nd Grade, but they also might work in 3rd Grade or 4th Grade as a review. Help your kid enjoy learning sight words through coloring their own story! Leave the learning struggle behind!

Effective awk Programming - Arnold Robbins 2001-05-23
Effective awk Programming, 3rd Edition, focuses entirely on awk, exploring it in the greatest depth of the three awk titles we carry. It's an excellent companion piece to the more broadly focused second edition. This book provides complete coverage of the gawk 3.1 language as well as the most up-to-date coverage of the POSIX standard for awk available anywhere. Author Arnold Robbins clearly distinguishes standard awk features from GNU awk (gawk)-specific features, shines light into many of the "dark corners" of

the language (areas to watch out for when programming), and devotes two full chapters to example programs. A brand new chapter is devoted to TCP/IP networking with gawk. He includes a summary of how the awk language evolved. The book also covers: Internationalization of gawk Interfacing to i18n at the awk level Two-way pipes TCP/IP networking via the two-way pipe interface The new PROCINFO array, which provides information about running gawk Profiling and pretty-printing awk programs In addition to covering the awk language, this book serves as the official "User's Guide" for the GNU implementation of awk (gawk), describing in an integrated fashion the extensions available to the System V Release 4 version of awk that are also available in gawk. As the official gawk User's Guide, this book will also be available electronically, and can be freely copied and distributed under the terms of the Free Software Foundation's Free Documentation License (FDL). A portion of the proceeds from sales of this book will go to the Free Software Foundation to support further development of free and open source software. The third edition of Effective awk Programming is a GNU Manual and is published by O'Reilly & Associates under the Free Software Foundation's Free Documentation License (FDL). A portion of the proceeds from the sale of this book is donated to the Free Software Foundation to further development of GNU software. This book is also available in electronic form; you have the freedom to modify this GNU Manual, like GNU software. Copies published by the Free Software Foundation raise funds for GNU development.
