distribution of health. Why and how should collective choices be made, and policies implemented, to address health inequalities under conditions of resource scarcity? How should societies conceptualize and measure health disparities, and determine whether they've been adequately addressed? Who is responsible for various aspects of this important social problem? In *Health and Social Justice*, Jennifer Prah Ruger elucidates principles to guide these decisions, the evidence that should inform them, and the policies necessary to build equitable and efficient health systems world-wide. This book weaves together original insights and disparate constructs to produce a foundational new theory, the health capability

paradigm. Ruger's theory takes the ongoing debates about the theoretical underpinnings of national health disparities and systems in striking new directions. It shows the limitations of existing approaches (utilitarian, libertarian, Rawlsian, communitarian), and effectively balances a consequentialist focus on health outcomes and costs with a proceduralist respect for individuals' health agency. Through what Ruger calls shared health governance, it emphasizes responsibility and choice. It allows broader assessment of injustices, including attributes and conditions affecting individuals' "human flourishing," as well as societal structures within which resource distribution occurs.

Addressing complex issues at the intersection of philosophy, economics, and politics in health, this fresh perspective bridges the divide between the collective and the individual, between personal freedom and social welfare, equality and efficiency, and science and economics.

*Medical Disorders in Obstetric Practice* - Michael De Swiet 2008-04-15

Obstetricians must have a firm grounding in the diagnosis and management of diseases affecting pregnant women as in some cases these may threaten the life of mother or baby or both. This book still remains the standard reference work on medical disorders in obstetric practice in the UK and UK-influenced areas such as the former Commonwealth. Exhaustive in its coverage, it

provides clear practical advice on the major medical disorders the obstetrician is likely to encounter. Each chapter reviews the pathophysiology of a complaint then applies the physiological and pathophysiological changes to the problem of diagnosis and management of the disorder as well as giving clear guidance on the welfare of the unborn. One of the major strengths of the book is that each chapter teaches the principles of care and gives an appreciation of the natural history of the disease rather than just the facts. Although a scholarly and rigorous account it manages to point out the clinically relevant information that the practising obstetrician will actually need.

*of Stupor and Coma* -  
Jerome B. Posner 2019  
Plum and Posner's  
Diagnosis and Treatment  
of Stupor and Coma, 5th  
edition, is a major  
update of the classic  
work on diagnosing the  
cause of coma, with the  
addition of completely  
new sections on  
treatment of comatose  
patients, by Dr. Jan  
Claassen, the Director  
of the Neuro-ICU at  
Columbia New York  
Presbyterian Hospital.  
The first chapter of the  
book provides an up-to-  
date review on the brain  
mechanisms that maintain  
a conscious state in  
humans, and how lesions  
that damage these  
mechanisms cause loss of  
consciousness or coma.  
The second chapter  
reviews the neurological  
examination of the  
comatose patient, which  
provides the basis for  
determining whether the  
patient is suffering  
from a structural brain

injury causing the coma, or from a metabolic disorder of consciousness. The third and fourth chapters review the pathophysiology of structural lesions causing coma, and the specific disease states that result in coma. Chapter five is a comprehensive treatment of the many causes of metabolic coma. Chapter 6 review psychiatric causes of unresponsiveness and how to identify and treat them. Chapters 7 and 8 review the overall emergency treatment of comatose patients, followed by the treatment of specific causes of coma. Chapter 9 examines the long term outcomes of coma, including the minimally conscious state and the persistent vegetative state, and how they can be distinguished, and their implications for

eventual useful recovery. Chapter 10 reviews the topic of brain death and the standards for examination of a patient that are required to make the determination of brain death. The final chapter 11 is by J.J. Fins, a medical ethicist who was invited by the other authors to write an essay on the ethics of diagnosis and treatment of patients who, by definition, have no way to approve of or communicate about their wishes. While providing detailed background for neurological and neurosurgical specialists, the practical nature of the material in this book has found its greatest use among Internists, Emergency Medicine, and Intensive Care specialists, who deal with comatose patients frequently, but who may not have had extensive

neurological training.
