Medical Terminology - Barbara J. Cohen 2013-02-08

Medical Terminology: An Illustrated Guide, 7e by Barbara Janson Cohen uses a stepwise approach to learning medical terminology. Part 1 describes how medical terms are built from word parts; Part 2 introduces body structures, diseases, and treatments; and Part 3 describes each body system. Individual chapters also build on knowledge in stages: the Key Terms sections list the terms most commonly used; more specialized terms are included in a later section entitled "Supplementary Terms." The current edition includes a robust student ancillary package delivered under the PASSport to Success brand, with assessment exercises, chapter quizzes, and searchable text online, and a complete suite of instructor resources. The addition of PrepU as a packaging option provides a powerful value to students - the online study experience helps them to understand and retain course information and helps instructors to better assess what their students may be struggling with.

Vocabulary Puzzles & Activities, Grade 5 - Inc. Teacher Created Resources 2008-01-04

Quick Medical Terminology - Genevieve Love Smith 1984

Abstract: A study guide for medical field workers provides a systematic approach for building a vocabulary and developing an understanding of thousands of medical terms. This approach is based on and active participation by the reader in identifying word parts, building new words, and pronouncing and practicing them. Following a description of the system, 10 study units teach the reader to form a constantly expanding medical vocabulary by using new word parts. Each study unit is divided into numbered frames; each frame provides information and asks a question, the answer to which is given at the end of each study unit. Review sheets for each unit, 2 "final" self-tests, an index of word parts learned, and a table of additional word parts are appended. (wz).

Short-Term Test Systems for Detecting Carcinogens - K.H. Norpoth 2012-12-06

The varying cancer incidence from country to country and region to region suggests that environmental factors play a considerable role in the aetiology of cancer. Whether these factors in the environment moderate the effect of carcinogenic chemicals or whether they might themselves be carcinogenic is not known at the present time. What is known is that there are various chemicals, both naturally occurring and man-made, which can induce cancer in man. In the Western world estimates vary as to how much cancer is occupational in origin; the figures range from 1% to 40%. It is our feeling that probably about 10% of cancer has a direct occupational origin. Nevertheless this number is considerable and it behoves us therefore to identify those chemicals which are carcinogenic and to reduce human exposure. Recent work on the mode of action of carcinogenic chemicals suggests that the majority exert their effect through an activation step to give electrophilic metabolites. Such metabolites have as a common feature the ability to react with cellular nucleophiles to give covalently bound products. Such reaction will occur after carcinogen treatment of animals with nucleic acids particularly in target organs. It is reaction with nucleic acids that provides the basis of a number of short-term tests for carcinogens, since the basic composition of DNA is similar in micro-organisms and in human cells.
