*Cynicism and Christianity in Antiquity* - Marie-Odile Goulet-Cazé 2019-08-20

Was Jesus a Cynic? Cynicism and Christianity in Antiquity is a literary tour de force analyzing and refuting the hypothesis that Jesus was a Cynic. Marie-Odile Goulet-Cazé examines the arguments submitted by some New Testament scholars who believe that Jesus and his disciples were influenced by the ethics and social behaviors of itinerant Cynic preachers. In examining the "Cynic Jesus hypothesis," Goulet-Cazé offers a reliable, accessible, and fully documented summary of Cynicism and its ideas, from Diogenes to the Imperial Period, and she investigates the extent and nature of contact between Cynics and Jewish people, especially between 100 BCE and 100 CE. While recognizing similarities between the ideas and morals of ancient Cynicism and those evident in early Christian movements, Goulet-Cazé identifies more significant, fundamental differences between them in culture, theology, and worldview.

**Theodor W. Adorno II** - Espen Hammer 2015

A new title in Routledge's Critical Assessments of Leading Philosophers series, this is a two-volume collection of the very best recent scholarship on Theodor W. Adorno (1903-69). It is an essential successor to an earlier four-volume collection, "Theodor Adorno" (Critical Evaluations in Cultural Theory) (978-0-415-30464-1), edited by Simon Jarvis and published by Routledge in 2006. Recent decades have seen a remarkable growth of scholarly studies devoted to Theodor W. Adorno's philosophy and social theory. Every year, conferences and publications all over the world testify to a lively

interest. Indeed, since his death in 1969, Adorno has been read and discussed not only by philosophers but by researchers in all areas of the theoretical humanities, and his impact has been considerable both inside and outside the academy. This new Routledge collection brings together the very best of recent research on Adorno. The editor has particularly focused on works that take account of contemporary developments in philosophy and social theory, demonstrating how Adorno's view may engage with contemporary theoretical concerns. With a full index, together with a comprehensive introduction, newly written by the editor, which places the collected material in its historical and intellectual context, "Theodor W. Adorno II" is an indispensable work of reference. It is destined to be valued by scholars, students, and researchers as a vital research resource."

**The Radical Humanism of Erich Fromm** - K. Durkin 2014-09-04

This book, shortlisted for the British Sociological Association's Philip Abrams Memorial Prize (2015), argues that Fromm is a vital and largely overlooked contribution to twentieth-century intellectual history, and one who offers a refreshingly reconfigured form of humanism that is capable of reintegrating explicitly humanist analytical categories and schemas back into social theoretical (and scientific) considerations.

Lucas must decide if he is with her or against her – even if Zaynab's actions

may prove dangerous...

**Turing Computability** - Robert I. Soare 2016-06-20  
Turing's famous 1936 paper introduced a formal definition of a computing machine, a Turing

machine. This model led to both the development of actual computers and to computability theory, the study of what machines can and cannot compute. This book presents classical computability theory from Turing and Post to current results and methods, and their use in studying the information content of algebraic structures, models, and their relation to Peano arithmetic. The author presents the subject as an art to be practiced, and an art in the aesthetic sense of inherent beauty which all mathematicians recognize in their subject. Part I gives a thorough development of the foundations of computability, from the definition of Turing machines up to finite injury priority arguments. Key topics include relative computability, and computably enumerable sets, those which can be effectively listed but not necessarily effectively decided, such as the theorems of Peano arithmetic. Part II includes the study of computably open and closed sets of reals and basis and nonbasis theorems for effectively closed sets. Part III covers minimal Turing degrees. Part IV is an introduction to games and their use in proving theorems. Finally, Part V offers a short history of computability theory. The author has honed the content over decades according to feedback from students, lecturers, and researchers around the world. Most chapters include exercises, and the material is carefully structured according to importance and difficulty. The book is suitable for advanced undergraduate and graduate students in computer science and mathematics and researchers engaged with computability and mathematical logic.

Conceptual Exploration - Bernhard Ganter  
2016-05-26

This is the first textbook on attribute exploration, its theory, its algorithms for applications, and some of its many possible generalizations. Attribute exploration is useful for acquiring structured knowledge through an interactive process, by asking queries to an expert. Generalizations that handle incomplete, faulty, or imprecise data are discussed, but the focus lies on knowledge extraction from

reliable information source. The method is based on Formal Concept Analysis, a mathematical theory of concepts and concept hierarchies, and uses its expressive diagrams. The presentation is self-contained. It provides an introduction to Formal Concept Analysis with emphasis on its ability to derive algebraic structures from qualitative data, which can be represented in meaningful and precise graphics.

The Challenge of Surrealism - Theodor W. Adorno  
2015

The correspondence between the philosopher Theodor W. Adorno and his politically active graduate student Elisabeth Lenk offers fresh insights into both Adorno's view of surrealism and its relation to the student uprisings of 1960s France and Germany. Written between 1962, when Lenk moved to Paris and persuaded an initially reluctant Adorno to supervise her sociology dissertation on the surrealists, and Adorno's death in 1969, these letters reveal a surprisingly tender side of the distinguished professor. The correspondence is accompanied by a selection of documents that bring additional depth and context to the letters and their engagement with the art and politics of the period. Filling in the background of Adorno and Lenk's lively exchange, the volume includes new translations of classic essays by Walter Benjamin ("Surrealism: Last Snapshot of the European Intelligentsia") and Adorno ("Surrealism Reconsidered"), along with a collection of short prose readings by Adorno and the writer-scholar Carl Dreyfus and three original essays by Lenk: her afterword to Paris Peasant by Louis Aragon, her Introduction to the German edition of Charles Fourier's *The Theory of the Four Movements* and the *General Destinies*, and her incisive essay "Critical Theory and Surreal Practice." An Introduction by Lenk's student, the contemporary writer and critic Rita Bischof, points to the continuing challenge of surrealist politics. This remarkable body of correspondence appears here in English for the first time, as do Adorno and

Dreyfus's surrealist readings and the essays by Lenk. Together, they provide a rich mine of critical material for reassessing the significance of the surrealist movement and its successors.

**The Philosophy of Life and Death** - Nitzan Lebovic  
2013-09-11

Some of the first figures the Nazis conscripted in their rise to power were rhetoricians devoted to popularizing the German vocabulary of *Leben* (life). This fascinating study reexamines this movement through one of its most prominent exponents, Ludwig Klages, revealing the philosophical-cultural crises and political volatility of the Weimar era.

*Play as Symbol of the World* - Eugen Fink  
2016-06-06

Eugen Fink is considered one of the clearest interpreters of phenomenology and was the preferred conversational partner of Edmund Husserl and Martin Heidegger. In *Play as Symbol of the World*, Fink offers an original phenomenology of play as he attempts to understand the world through the experience of play. He affirms the philosophical significance of play, why it is more than idle amusement, and reflects on the movement from "child's play" to "cosmic play." Well-known for its nontechnical, literary style, this skillful translation by Ian Alexander Moore and Christopher Turner invites engagement with Fink's philosophy of play and related writings on sports, festivals, and ancient cult practices.

**Ponderings II–VI** - Martin Heidegger 2016-05-02  
*Ponderings II–VI* begins the much-anticipated English translation of Martin Heidegger's "Black Notebooks." In a series of small notebooks with black covers, Heidegger confided sundry personal observations and ideas over the course of 40 years. The five notebooks in this volume were written between 1931 and 1938 and thus chronicle Heidegger's year as Rector of the University of Freiburg during the Nazi era. Published in German as volume 94 of the Complete Works, these challenging and fascinating journal entries shed light on Heidegger's philosophical development

regarding his central question of what it means to be, but also on his relation to National Socialism and the revolutionary atmosphere of the 1930s in Germany. Readers previously familiar only with excerpts taken out of context may now determine for themselves whether the controversy and censure the "Black Notebooks" have received are deserved or not. This faithful translation by Richard Rojcewicz opens the texts in a way that captures their philosophical and political content while disentangling Heidegger's notoriously difficult language.

**Matthew's Theological Grammar** - Joshua E. Leim  
2015-10-19

In this work, Joshua Leim attempts to bring greater clarity to the articulation of Jesus' identity in Matthew by attending more precisely to two linguistic patterns woven deeply into the entire narrative's presentation of Jesus: Matthew's christological use of "worship/obedience" language (*proskyneō*) and his paternal-filial idiom. Along with exploring the role these linguistic patterns play in the narrative, the author attempts to hear such language in relation to early Judaism and its articulation of the identity of the God of Israel. The study of these various elements yields the conclusion that the identity of God and Jesus Christ are inseparably related in Matthew's Gospel. Matthew articulates the identity of Israel's God around the Father-Son relation.

**Wittgenstein** - Harry Redner 2016-07-27

A politically oriented study of the thought of the founders of the main schools of contemporary academic philosophy, those which dominate nearly all universities throughout the world. It concentrates on four key masters: Wittgenstein, who founded both Logical Positivism and the so-called Common Language or Analytic school; Heidegger, the acknowledged master of Hermeneutic Philosophy or the so-called Continental school; Lukacs, the founder of Hegelian Marxism and the leading Communist philosopher of the Soviet period; and, finally, the now lesser-known Gentile, the Hegelian Idealist.

**Semantic and Fuzzy Modelling for Human Behaviour Recognition in Smart Spaces** - N. Díaz Rodríguez 2016-06-08

One of the major limitations of the Ambient Intelligent Systems today is the lack of semantic models of those activities on the environment, so that the system can recognize the specific activity being performed by the user(s) and act accordingly. In this context, this thesis addresses the general problem of knowledge representation in Smart Spaces. The main objective is to develop knowledge-based models, equipped with semantics to learn, infer and monitor human behaviours in Smart Spaces. Moreover, it is easy to recognize that some aspects of this problem have a high degree of uncertainty, and therefore, the developed models must be equipped with mechanisms to manage this type of information. As an added value, this system should be sufficiently simple and flexible to be managed by non-expert users, and thus, facilitate

the transfer of research to industry. To do this, we develop graphical models to represent human behaviour in Smart Spaces, in order to provide them with more usability in the final application. As a result, human behaviour recognition can help assisting people with special needs such as independent elders, in remote rehabilitation monitoring, industrial process guidelines, and many other cases.

*Affectivity and Philosophy after Spinoza and Nietzsche* - Stuart Pethick 2015-10-12

Pethick investigates a much neglected philosophical connection between two of the most controversial figures in the history of philosophy: Spinoza and Nietzsche. By examining the crucial role that affectivity plays in their philosophies, this book claims that the two philosophers share the common goal of making knowledge the most powerful affect.
