*Ecclesial Identities in a Multi-Faith Context - Darren Todd Duerksen*  
2015-07-30

When Hindus and Sikhs become followers of Christ, what happens next? Should they join Christian churches that often look and feel very unfamiliar to them? Or to what degree can or should they remain a part of their Hindu/Sikh communities and practices? Uncomfortable with the answers that were provided to them by Christian leaders in northwest India, six followers of Christ began Yeshu satsangs that sought to follow Christ and the teachings of the Bible while remaining connected to their Hindu and/or Sikhcommunities. 'Ecclesial Identities in a Multi-Faith Context' contextualises the practices and identities of these leaders and their gatherings, situating these in the religious history of the region and the personal histories of the leaders themselves. Whereas some Christians worry that the Yeshu satsangs and related 'insider movements' are syncretising their beliefs and are not properly identifiable as 'churches', Darren Todd Duerksen analyses the Yeshu satsang's narratives and practices to find vibrantexpressions of local church that are grappling with questions and tensions of social and religious identity. In addition to his ethnographic approach, Duerksen also uses recent sociological and anthropological theory in identity formation and critical realism, as well as discussions of biblical ecclesiology from the Book of Acts. This study will be a helpful resource for those interested in global Christianity, the practices and identities of churches in religiously plural environments, and the creative ways in which Christfollowers can engage people of other faiths.

*Emergency Medical Systems* - Zohra Jalal 2011-08-19

A formal training program with theoretical and practical components is essential for all emergency medical personnel involved in providing care for critically injured patients. Communication, effective first aid, and on time transportation to a health center play a major role in improving quality of care for critically injured patients. Using life experience examples, participants in the study emphasized the importance of each factor on the delivery of quality care for critically injured patients. Recommendations based on the study findings included two main categories. The first category illustrated recommendations to stakeholders, and the second

category reflected recommendations for further study. Stakeholders in this study included healthcare leaders in Afghanistan, healthcare professionals involved in providing health care in Afghanistan, and local people in Afghanistan. The modified van Kaam method in the qualitative phenomenological study involved conducting semistructured interviews, which were audio-taped and transcribed. The rationale for using the phenomenological approach in the qualitative study was to describe in-depth experiences of health care professionals. Moustakas (1994) modified van Kaam method explored the lived experiences and

perceptions of 17 doctors and nurses relating to emergency trauma care for critically injured patients. Data analysis revealed important factors that could enhance the quality of prehospital care for civilian casualties of landmine and unexploded ordnance (UXO) blast injuries in Afghanistan. The four major themes that emerged from participants responses to interview questions included communication, formal training for emergency medical personnel, transportation to a higher-level center, and quality of prehospital care.
