On July 18, 1924, a mob in Tehran killed U.S. foreign service officer Robert Whitney Imbrie. His violent death, the first political murder in the history of the service, outraged the American people. Though Imbrie's loss briefly made him a cause célèbre, subsequent events quickly obscured his extraordinary life and career. Susan M. Stein tells the story of a figure steeped in adventure and history. Imbrie rejected a legal career to volunteer as an ambulance driver during World War I and joined the State Department when the United States entered the war. Assigned to Russia, he witnessed the October Revolution, fled ahead of a Bolshevik arrest order, and continued to track communist activity in Turkey even as the country's war of independence unfolded around him. His fateful assignment to Persia led to his death at age forty-one and set off

political repercussions that cloud relations between the United States and Iran to this day. Drawing on a wealth of untapped materials, *On Distant Service* returns readers to an era when dash and diplomacy went hand-in-hand.

A doctor describes his experience with George Washington's army during their winter at Valley Forge, a naval hero recounts his exploits at sea with John Paul Jones, and women tell of flirtations with officers in the Continental Army. Within these narratives are descriptions of both thrilling action on the high seas and the dank interiors of prison ships, where many ended

Industry 4.0 for SMEs - Dominik T. Matt 2020-01-03
This open access book explores the concept of Industry 4.0, which presents a considerable challenge for the production and service sectors. While digitization initiatives are usually integrated

into the central corporate strategy of larger companies, smaller firms often have problems putting Industry 4.0 paradigms into practice. Small and medium-sized enterprises (SMEs) possess neither the human nor financial resources to systematically investigate the potential and risks of introducing Industry 4.0. Addressing this obstacle, the international team of authors focuses on the development of smart manufacturing concepts, logistics solutions and managerial models specifically for SMEs. Aiming to provide methodological frameworks and pilot solutions for SMEs during their digital transformation, this innovative and timely book will be of great use to scholars researching technology management, digitization and small business, as well as practitioners within manufacturing companies.

Learning with

Information Systems -

Simon Bell 2013-02-01
In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

----- The purpose of this book is to provide efficient materials for those who want to learn the software of Autodesk Revit, especially for those who are interesting in building MEP systems. This book is ideal for school students and instructors. It also helps MEP professionals who want to add this software tool to enhance their works. As the title "Step by Step" of this book implies, readers will exercise the software from the beginning to the end of the modeling. That's how you get the whole picture of the entire story and learn the software. This book covers five major disciplines of MEP systems: • Mechanical • Hydronic Piping • Electrical • Plumbing • Fire Protection Besides

the modeling of 3D Duct Works, Conduits and Piping, it also covers Energy Analysis, Lighting Calculation, Schedule Creations and many MEP related Properties. The last two are really the heart of Building Information. Author also included a bonus chapter of Architectural Modeling that will give reader extra background and experience of the software. I wrote this book in two versions: Imperial and Metric. Reader can choose the one to suit his/her need. With 1000+ steps, 1000+ figures, 60+ exercise files (download from author's Google Drive) to guide you to complete the entire modeling of a building, there is no reason you cannot succeed Autodesk Revit MEP.
